(NOTE. *With* and *by* are so closely allied in many of their senses, that their uses are very frequently identified one with the other; so much so that it is somewhat difficult to define a rule of distinction. Johnson, indeed, observes that, *with* seems rather to denote an instrument, and *by* a cause; thus, he kills his enemy *with* a sword, but he died *by* an arrow. This rule if such it may be called) is not, however, conclusive. *With*, in composition, has, sometimes, a privative, combative, or dissociative sense.)

—*n.* Same as WITHE, *q. v.*

(*Arch.*) A partition between different flues in a chimney.

Withal, (*with-awl'*,) *adv.* [*With* and *all.*] Along with all the rest; together with; likewise; at the same time; as, so modest, and *withal* so brave.

—*prep.* With; — employed in combination with a verb, and preceded by the object of the verb; as, "It is to know what God is pleased *withal*." — *Tillotson.*

With'amite, *n.* (*Min.*) A variety of Magnesian Epidote, consisting of ferro-silicate of alumina in minute but brilliant and transparent carmine-red crystals.

With'amsville, in *Ohio*, a post-village of Clermont co., 16 m. E of Cincinnati.

Withdraw', *v. a.* (*imp.* WITHDREW; *pp.* WITHDRAWN.) [A. S. *with*, against, opposite, and *draw.*] To take back or away; to remove; to reverse; to cause to retire or leave; as, to *withdraw* one's favor from a person. — To recall; to take back; to retract; as, to *withdraw* an accusation.

—*v. n.* To retire; to retreat; to quit a company or place; to secede; as, the ladies *withdrew*, leaving the gentlemen to their wine.

Withdraw'al, Withdraw'ment, *n.* Act of withdrawing or taking back; a taking back.

Withdraw'er, *n.* One who withdraws.

Withdraw'ing-room, *n.* Same as DRAWING-ROOM (*q. v.*), its modern abbreviated form.

Withe, *n.* [A. S. *withig.*] A band consisting of a twig or twigs twisted; also, a willow twig.

(*Naut.*) An iron instrument fitted on one end of a mast or boom, with a ring to it, through which another mast or boom is rigged out and secured.

—*v. a.* To bind or fasten with withes or twigs.

With'er, *v. n.* [A. S. *gewithered*, withered, *widern*, dryness.] To fade; to become sapless; to lose native freshness; as, *withered* vegetation. — To waste; to pine away; to droop, through lack or loss of animal moisture; as, a *withered* old woman. — To perish; to pass away; as, a name and fame that shall not *wither*.

—*v. a.* To cause to fade and become dry; as, frosts *wither* tender plants. — To cause to shrink, wrinkle, and decay, for lack of animal moisture; as, a hale constitution which age does not *wither*. — To cause to perish or pass away; as, hopes *withered* by misfortune.

With'er-band, *n.* (*Far.*) A piece of iron attached to a saddle to strengthen its bow, near a horse's withers.

With'eredness, *n.* State of being withered.

With'ering, *p. a.* Tending to wither, or causing to shrink; blighting; as, a *withering* blast; a *withering* rebuke or sarcasm.

With'eringly, *adv.* In a manner tending to wither, or to cause to shrink.

With'erite, *n.* (*Min.*) A native carbonate of baryta. It occurs amorphous and in six-sided crystals resembling the common form of quartz, and generally white, but sometimes of a grayish or greenish color.

With'ernam, *n.* [From A. S. *widher*, against, and *nám*, a seizure.] (*Law.*) A taking or a reprisal of other goods, instead of those that were formerly taken, and withheld.

Withe'rod, *n.* (*Bot.*) See VIBURNUM.

With'ers, *n. pl.* [Goth. *vithan*, to join.] The junction of the shoulder-bones of a horse, at the bottom of the neck and mane, towards the upper part of the shoulders.

With'er-wrung, (*-rŭng,*) *a.* Injured or strained in the withers, as a horse.

Withhold', *v. a.* (*imp.* WITHHELD; *pp.* WITHHELD, or WITHHOLDEN.) To hold back; to restrain; to debar from action; as, *withhold* one man from striking another. — To retain; to keep back; not to grant or bestow; as, her father *withheld* his consent to our marriage.

Withhold'er, *n.* One who withholds.

Withhold'ment, *n.* Act of withholding. (R.)

Within', *prep.* [A. S. *with*, in the midst of, and *innan*, inwardly.] In, as opposed to some person or thing *out*; inside of; as, to keep *within* doors. — In the limits or compass of; not further in length or distance than; as, *within* a mile of one's house; not longer ago or later than; as, *within* the past week; not exceeding or being more than; as, to live *within* one's means. — Hence, metaphorically, not reaching to anything external; not beyond; not overstepping, &c.; as, if it should lie *within* my power, I shall be happy to serve you.

—*adv.* In the inner part or interior; inwardly; as, hemorrhage has commenced *within*. — In doors; in the house; not outside; as, there is nobody *within*.

Withlacoo'chee, a river of Georgia and Florida, rises in Irwin co., Georgia, and flowing S. enters the Suwanee River at the S.W. of Hamilton co. — A river of Florida, flows N.W. into the Gulf of Mexico, between Levy and Hernando cos.

Without', *prep.* [A. S *with*, in the midst of, and *utan*, outwards.] On or at the outside of; not within; as, *without* the house. — Beyond; past the limits of; out of reach of; as, *without* the bounds. — In a state of not having, or of destitution; in a state of deprivation or absence from; supposing the negation or omission of; independent of; not by the use of; with exemption from; as, *without* money; *without* hope; *without* damage or detriment; *without* a wife to try one's patience. — Except; unless; — clausular and conjunctional in effect, but seldom used at the present day by elegant writers or speakers; as, you will not accomplish your object *without* you use dispatch.

Without day. See SINE DIE. — *Without recourse.* See RECOURSE.

—*adv.* Not within; on the outside; out of doors; externally; as, the noise came from *without*.

Withstand', *v. a.* (*imp.* and *pp.* WITHSTOOD.) To stand against or in antagonism to; to oppose; to resist, either with physical or moral force; as, to *withstand* a sortie of troops; to *withstand* temptations.

Withstand'er, *n.* One who opposes, resists, or withstands; an antagonistic influence or power.

Withstood', *pp.* of WITHSTAND, *q. v.*

With'-vine, *n.* (*Bot.*) The Conch-grass. See TRITICUM.

With'wind, *n.* A name given to the wild convolvulus.

With'y, *n.* [A. S. *widhig.*] A large species of willow; a withe; an osier.

—*a.* Made of, or resembling, withes; hence, tough and pliable.

Wit'less, *a.* Destitute of wit, comprehension, or understanding. — Hence, indiscreet; rash; hare-brained.

Wit'lessly, *adv.* In a witless or ill-judged manner.

Wit'lessness, *n.* State or quality of being witless.

Wit'ling, *n.* [dim. of *wit.*] A petty or puerile wit; one who is deficient in wit or understanding; a would-be sayer of good things; a fribble; as, half-learned *witlings*.

Wit'ness, *n.* [A. S. *witnes*, *gewitnes*, from *witan*, to know.] Testimony; attestation of a fact or event; as, to bear *witness*. — That which presents evidence or proof; as, "The sun and day are *witnesses* for me." — *Dryden.*

— One who knows or sees, or is cognizant; as, an eye-*witness*.

"God is *witness* betwixt thee and me." — *Gen.* xxxi. 50.

(*Law.*) One who sees the execution of a legal instrument and subscribes it for the purpose of confirming its authenticity by his testimony. — One who gives evidence or testimony; one who tells what he knows or has seen, as before a judicial tribunal. In civil or in criminal cases, *W.* are compelled to attend by a process of *subpœna*, or by recognizance by the magistrate before whom the information is given. The *W.* is sworn not only to tell the truth, but also the whole truth, and nothing but the truth. All *W.*, of whatever religion or country, that have the use of their reason, are to be received and examined, provided they believe in a God and in a future state of rewards and punishments.

—*v. a.* To have direct or immediate cognizance of; to see or know by personal presence; to observe; as, to *witness* an imposing ceremonial. — To attest; to give testimony to something; as, to *witness* against a wrong-doer. — To see the execution of a legal instrument: and subscribe it in order to establish its authenticity; as, to *witness* the signing of a will or a bond.

—*v. n.* To testify; to give or bear evidence, witness, or testimony.

Wit'nesser, *n.* One who witnesses.

Witney, (*wit'ne,*) a town of England, in Oxfordshire, on the Windrash, 11 m. from Oxford. *Manuf.* Blankets, gloves, and malt. *Pop.* abt. 4,000.

Witt. See DE WITT.

Wit'ted, *a.* Possessing wit or understanding; — used chiefly in composition; as, a sharp-*witted* fellow.

Wit'tenberg, a fortified city of Prussian Saxony, on the Elbe, 45 m. from Merseburg, (Fig. 2625.) It is a place of some antiquity, and its university, founded in 1502 (united to that of Halle in 1817), is memorable as the cradle of the Reformation. Luther and Melancthon

Fig. 2625. — WITTENBERG.

are buried in the university church. In 1821, a monumental colossal statue of Luther was erected in *W.*, with great solemnity. The cell of Luther, in the Augustine convent (Fig. 1789), and the house of Melancthon, are still preserved. *Manuf.* Woollen goods. *Pop.* 13,870.

Wit'ticism, (*-sizm,*) *n.* [From *wit.*] A pungent remark which is affectedly witty; a would-be smart saying, or pointed joke; usually, a low kind of wit.

Wit'tily, *adv.* [From *wit.*] In a witty manner: with wit; with a felicitous turn or pointed phrase, or with an ingenious association or adaptation of ideas; ingeniously; artfully; skilfully; as, words of wisdom *wittily* expressed.

Wit'tiness, *n.* State or quality of being witty.

Wit'tingly, *adv.* [See WIT.] Knowingly; by design.

Wit'tol, *n.* [A. S.] One who wears his horns submissively: a tame cuckold.

Wittstock, (*vit'stok,*) a town of Prussia, on the Dosse, 56 m. from Berlin. *Pop.* 7,186.

Wit'ty, *a.* (*comp.* WITTIER; *superl.* WITTIEST.) [From *wit.*] Full of humor or ingenious terms of thought; possessed of wit or felicitous pleasantry of remark; quick at repartee; facetious; droll; sometimes, sarcastic; satirical; disposed to taunt; as, a *witty* answer, a *witty* address, a *witty* saying, and the like.

Wive, *v. n.* To take a wife; to enter into the state of matrimony, as a man.

—*v. a.* To provide with, or match to, a wife; also, to espouse; to wed; to take for a wife, as a man.

Wives, *n. pl.* of WIFE, *q. v.*

Wiz'ard, *n.* [From O. Ger. *wizagon*, to prophesy.] A practitioner of the black art or diablerie; a necromancer; a sorcerer; an enchanter. — Hence, a term sometimes applied to one who performs, as if with magical effect; as, Scott, the *Wizard* of Romance.

—*a.* Enchanting; charming; alluring; as, *wizard* spells. — Haunted by wizards; as, a *wizard* glade.

Wiz'en-faced, *a.* Weazen-faced.

Woad, *n.* (*Bot.*) See ISATIS.

Woad'-waxen, *n.* (*Bot.*) The Dyer's broom. See GENISTA.

Woahoo, or **Oahoo,** (*o'a-hoo.*) One of the Sandwich islands, in the Pacific Ocean; *area*, 530 sq. m.; Lat. 21° 18′ N., Lon. 157° 55′ W.; *pop.* abt. 30,000.

Woburn, in *Massachusetts*, a manufacturing city of Middlesex co. *Pop.* (1895) 14,178.

Woe, (*wo,*) *n.* [A. S. *wa*; Lat. *væ*; Gr. *ouai*; Ger. *weh*; Du. *wee.*] Grief; sorrow; misery; a heavy calamity; anguish; distress; affliction. — A curse; malediction. — Woe is often used in denunciation, and in exclamations of sorrow.

Woe'-begone, *a.* Overwhelmed with grief or sorrow; very sad.

Woe-shaken, *a.* Shaken by woe.

Wo'ful, Woe'ful, *a.* Full of woe; sorrowful; distressed with grief or calamity. — Bringing calamity, distress, or affliction. — Wretched; paltry; miserable.

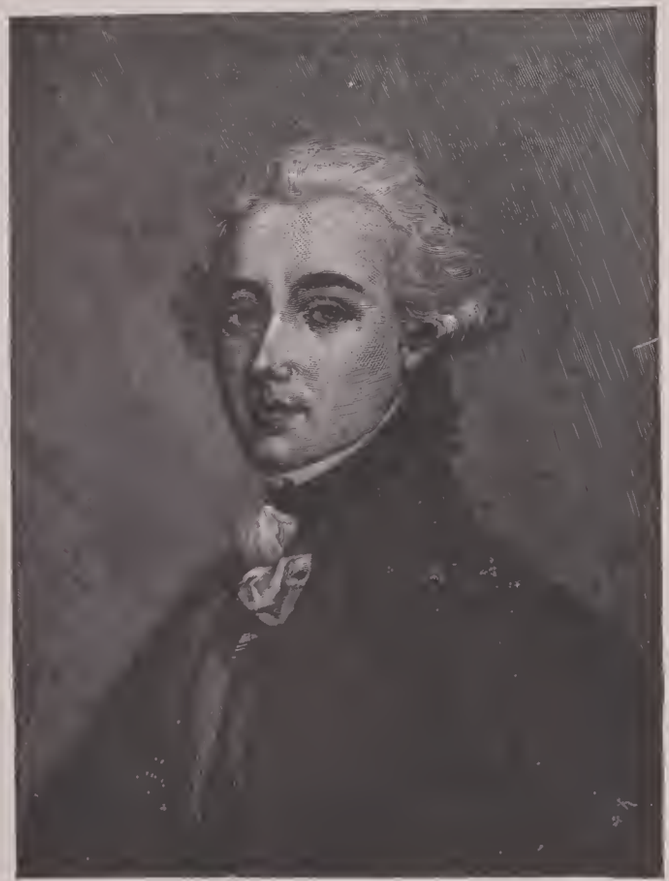
Wo'fully, Woe'fully, *adv.* In a woful manner; sorrowfully; mournfully. — Wretchedly; extremely.

Wo'fulness, Woefulness, *n.* The state of being woful: misery; calamity.

Wolcott, in *Connecticut*, a post-township of New Haven co., 22 m. S.W. of Hartford.

Wolcott, in *New York*, a post-village and township of Wayne co., 160 m. N.W. of Albany.

Wolcott, in *Vermont*, a post-village and township of Lamoille co., 25 m. N.E. of Montpelier



James Wolfe

1726–1759

Wol'cottville, in *Connecticut*, a village of Litchfield co., 25 m. W. of Hartford.

Wold, *n.* [A. S.] A wood; a forest. — An open tract of country, hilly and void of wood; a down.

Wolf, (*wulf,*) *n.* [A. S. *wulf*; Goth. *vulfs*, from *vilvan*, to seize; Ger. *wolf.*] (*Zoöl.*) A carnivorous quadruped belonging to the genus *Canis*. In structure, the Common *W.* of Europe (*Canis lupus*, Linn.) is about the size of a large dog, but it is leaner and more gaunt in appearance, its height being from two feet and a half to three feet, while its length varies between three and four feet. The color of his coat is a mixture of black, brown, and gray, the hair being rough and hard, and mixed at the base with a sort of under-coat of ash colored fur. Its eyes have a most peculiar obliquity, which gives it a very fierce appearance; being directed upwards in a line with the nose, and the color of the eye-balls being a fiery green, the ferocity inherent in the animal appears increased. The breath of the *W.* is very offensive, and his flesh is said to be rejected by all other carnivorous animals, with the exception of those of his own species. The female goes fourteen weeks with young, and produces five or six cubs at a litter, which she tends and trains with the greatest assiduity for the space of some twelve months, after which she leaves them to shift for themselves. In disposition the *W.* is a cruel, cowardly animal, generally attacking such as are unable to resist it; but when pressed by hunger, it will even attack man. The wolves generally hunt and pursue their prey in packs: and in hilly countries, where precipices abound, they often destroy far swifter animals than themselves, by encompassing them in a semi-circle, and driving them over some great declivity, where they are dashed to pieces. The wolves then descend by some path, and feast on their victims. The *W.* was formerly common throughout Europe, but is now confined to the northern portions of that continent and Asia.—The Black Wolf, *C. occidentalis*, var. *Ater*, of Florida and other S. States, is wholly black. — The Red Wolf, *C. occidentalis*, var. *Rufus*, of Texas, is mixed red and black above, lighter beneath.— The Prairie Wolf, or Coyote, *C. latrans*, of the countries west of the Mississippi, is considerably larger than the common fox, dull yellowish-gray on the back and sides, with a clouding of black; under parts dingy-white.

—Anything ravenous or destructive.

To keep the wolf from the door, to avoid starvation.

Wolf, Frederick Augustus, a celebrated German scholar, b. near Nordhausen, 1759. Among his numerous works, the most celebrated is *Prolegomena ad Homerum*, in which he established with the most extraordinary learning that the "Iliad" and "Odyssey" were the works of various rhapsodists.

Wolf, or Wolff, Johann Christian von, a German philosopher and mathematician, b. in Breslau, 1679. In 1707 he became professor of mathematics at Halle, and in 1721 was appointed counsellor to the court of the king of Prussia; but some of his religious and metaphysical opinions giving offence to the faculty of theology, he was banished from Halle; on which he removed to Cassel, became counsellor to the landgrave, and obtained a professorship at Marburg. He was also honored with marks of distinction by the king of Sweden, and was elected a member of the Academies of Sciences of Paris and St. Petersburg, and fellow of the Royal Society of London. In 1741 he was recalled by Frederick the Great, who appointed him privy councillor, vice-chancellor, and professor of International law. He was afterwards made chancellor of the university, and the elector of Bavaria created him a baron. His principal works are, *A Course of Mathematics; Philosophia Rationalis*; a *System of Metaphysics*; and a *Dictionary of the Mathematics*. D. 1754.

Wolf, in *Pennsylvania*, a township of Lycoming county.

Wolfborough, in *N. Hampshire*, a post-vill. and twp. of Carroll co., 30 m. E.N.E. of Concord.

Wolf Creek, in *Kentucky*, a township of Mead county.

Wolf-dog, *n.* A powerful dog, *Canis Pomeranus*, kept to guard sheep.

Wolfe, James, a British major-general, b. in Kent, 1726. Having entered the service early, he greatly distinguished himself in Flanders and Germany till the year 1748. In 1759 he was appointed to the expedition against Quebec. By his excellent strategic dispositions he gained a position upon the hills which command Quebec. Montcalm, his brave adversary, contested the possession of the city with great skill and determination, but he fell during the battle, and the French were compelled to give way. *W.* also was mortally wounded in the moment of victory, and d. the same day, 1759.

Wolfenbüttel, (*vol'fen-bē(r)'tel,*) a city of Germany, on the Ocker, 37 m. from Hanover. It has a celebrated library which consists of 200 or 220,000 vols. and 5,000 MSS., of which Lessing was sometimes librarian. *Manuf.* Lacquered and Japan wares, leather, tobacco, &c. *Pop.* 9,778.

Wolf-fish, *n.* (*Zoöl.*) The *Asarrhicus lupus*, an acanthopterygious fish, which inhabits the North Sea, is generally of great size, sometimes attaining the length of 6 or 7 feet, and is furnished with jaws so well armed as to render it a dangerous inhabitant of the deep.

Wolf Creek, in *Pennsylvania*, a post-twp. of Mercer co.

Wolf Creek, in *Virginia*, rises in Tazewell co., and flowing N.E., enters the Kanawha or New River, near Parisburg, in Giles co.

Wolf Creek, in *W. Virginia*, a township of Monroe co.

Wolfe, in *Kentucky*, an E. co.; *area*, 250 sq. m. *Rivers.* Red, and the N. Fork of the Kentucky River. *Surface,* diversified; *soil,* generally fertile. *Cap.* Campton.

Wolfish, *a.* Like a wolf; having the qualities or form of a wolf.

Wolfishly, *adv.* Like a wolf; in a wolfish manner.

Wolf Island, in *Missouri*, a post-township of Mississippi co.

Wolf Islands, in British N. America, a group in Passamaquoddy Bay, New Brunswick, N. of Grand Manan Island; Lat. of the most N., 44° 59′ N., Lon. 66° 41′ W.

Wolfram, *n.* (*Min.*) A native tungstate of protoxide of iron, met with in the primary rocks of Cornwall, Saxony, and other countries, frequently associated with tinore. It occurs both massive and crystallized, of a dark-grayish or brownish-black color, with a brilliant (often metallic) lustre, and is sometimes feebly magnetic.

Wolf River, in *Kansas*, a township of Douiphan county.

Wolf River, in *Mississippi*, rises in Marion co., and flowing S.E., enters the Gulf of Mexico, in the S.W. of Harrison co.—Another river of same name, rises in Tippah co., and enters the Mississippi River at Memphis, Tennessee, after a W.N.W. course of 100 m.

Wolf River, in *Wisconsin*, rises in Marathon co., and enters Fox River in Winnebago co., after a S.S.E. course of 150 m.

Wolfsville, in *N. Carolina*, a post-village of Union co., 178 m. W.S.W. of Raleigh.

Wolhol'ta, in *S. Carolina*, a village of Pickens dist.

Wolfsbane, *n.* (*Bot.*) Same as Aconite, *q. v.*

Wollaston, William Hyde, an English physician and experimental philosopher, b. in London, 1766. He studied at Cambridge, and graduated M. D. in 1793. He was soon after admitted to the Royal Society, of which he subsequently became secretary. His want of patronage as a physician induced him to give up his profession in disgust, and devote himself to scientific pursuits, the result of which was, that he became one of the most eminent chemists and experimentalists of modern times. Among his discoveries in mineralogy are the two metals palladium and rhodium, and the method of rendering platinum malleable. He invented a sliding scale of chemical equivalents, a goniometer, and the camera lucida. D. 1828.

Wollastonite, *n.* (*Min.*) A silicate of lime which occurs generally in broad prismatic or laminar masses, but sometimes in distinct tabular prisms, from which it has derived the common name of Table or Tabular Spar.

Wollaston Land, in British N. America, a region in the Arctic Ocean, W. of Victoria Land, the E. extremity of which is in Lat. 68° 45′ N., Lon. 113° 53′ W.

Wolsey, Thomas, an English prelate and statesman, b. in Ipswich, 1471, was the son of a butcher. After finishing his education at Oxford, he became tutor to the sons of the marquis of Dorset; on going to court, he gained the favor of Henry VII., who sent him on an embassy to the Emperor, and on his return made him dean of Lincoln. Henry VIII., in 1514, made him archbishop of York. Insatiable in the pursuit of emolument, he obtained the administration of the see of Bath and Wells, and the temporalities of the abbey of St. Alban's, soon after which he enjoyed in succession the rich bishoprics of Durham and Winchester. By these means his revenues nearly equalled those of the crown, part of which he expended in pomp and ostentation, and part in laudable munificence for the advancement of learning. He founded the college of Christ Church at Oxford, and built a palace at Hampton Court, which he presented to the king. He was at this time in the zenith of power, and had a complete ascendancy over the mind of Henry, who made him lord chancellor, and obtained for him a cardinalship. He was also nominated the pope's legate; and aspired to the chair of St. Peter. In this he failed, and a few years later he lost all the power and the possessions he had gained. His advice in the matter of the king's divorce from Queen Catherine, the ruinous taxation he had imposed, and the personal enmity of some powerful persons, combined to his overthrow. He was prosecuted, deprived of everything, and sent to live in retirement at Esher. Although the king restored him to some of his offices soon after, and he returned to his see of York, a charge of treason was brought against him. In 1530 he was apprehended at York, but was taken ill, and died at Leicester on his way to London, exclaiming, "Had I but served my God as faithfully as I have served my king, he would not have given me over in my gray hairs."

Wolsingham, or **Walsingham,** a town of England, co. of Durham, on the Wear, 14 m. from Durham. *Manuf.* Woollens, linens, and hardware. *Pop.* 4,300.

Wolverhampton, a market-town of England, in Staffordshire, 13 m. from Birmingham. It is a well built and healthy town, notwithstanding its vicinity to numerous coal-mines. *Manuf.* Locks, brass, japanned iron, &c.

Wolverine, *n.* (*Zoöl.*) See Gulo.

Woman, (*wum'an,*) *n.*; *pl.* Women, (*wim'en.*) [A. S. *wiman, wimman*; Lat. *femina*, kindred with *fui*, I was; Gr. *phūō*, to come into being; Slav. *byti*, to be; Ir. *fuitim*, I am; Sans. *bhū*, to be.] The female of the human race; — particularly applied to an adult or grown-up female, as distinguished from a child or girl, &c.—A female attendant or servant.

(*Hist.*) From the circumstance that the chapters of the Bible which treat of the incidents immediately after the Fall contain scarcely any allusion to woman, it has been inferred that the female character was then held in very low estimation. Among the pastoral nations of the Primitive Ages, women tended the flocks and herds, drew water, and performed other menial offices. The Egyptians treated women with considerable kindness, and employed them in weaving and spinning; and the Jewish law, though severe in the case of female offences, afforded them ample protection, and assigned them an important position in the national and social economy. Smith (Smaller Dictionary of the Bible), referring to the position of woman in the Hebrew commonwealth, and contrasting it with that which she generally occupies among Eastern nations, remarks, — "Rebekah travelled on a camel with her face unveiled, until she came into the presence of her affianced (*Gen.* xxiv. 64–5); Jacob saluted Rachel with a kiss in the presence of the shepherds (*Gen.* xxix. 11). Women played no inconsiderable part in public celebrations (*Exod.* xv. 20–1; *Judg.* xi. 34). The odes of Deborah (*Judg.* v.), and of Hannah (1 *Sam.* ii. 1, &c.), exhibit a degree of intellectual cultivation which is in itself a proof of the position of the sex in that period. Women occasionally held public offices, particularly that of prophetess, or inspired teacher (*Exod.* xv. 20; *Judg.* iv. 4; 2 *Kings* xxii. 14; *Neh.* vi. 14; *Luke* ii. 36). The management of household affairs devolved mainly on the women. The value of a virtuous and active housewife forms a frequent topic in the Book of Proverbs (xi. 16; xii 4; xiv. 1; xxxi. 10, &c.)." Among the Greeks women were secluded in private apartments, and were compelled to wear a veil when out of doors. The Romans treated women with great consideration, entrusting to them the education of the young and the control of their household affairs; but in the latter days of the Republic and of the Empire, when morals became corrupt, measures were taken for their restraint. Thus the *Lex Oppia* imposed sumptuary restrictions; Augustus (B. C. 27—A. D. 14) would not allow them to be present at the public games; and by a law passed in 222, they were formally excluded from the senate. The ancient Germans assigned a very high position to the female sex; and Tacitus (61–117) commemorates the excellence of character which their women exhibited. During the Dark Ages the female lot was of course a hard one, the right of free choice in marriage and the advantages of education being totally denied them. The romantic chivalry of the 11th and following centuries introduced a better order of things, and laid the foundation for that recognition of female rights and respect for female excellence which are at once the most powerful agent and the clearest evidence of modern civilization.

—*v. a.* To make pliant or effeminate, as a woman. (R.)

Woman-hater, *n.* One who has an aversion to woman.

Womanhood, *n.* The state, character, or collective qualities of a woman. — Women taken collectively.

Womanish, *a.* Suitable to a woman; having the qualities of a woman; feminine; effeminate.

Womanishly, *adv.* In a womanish manner.

Womanishness, *n.* The state or quality of being womanish.

Womankind, *n.* The female sex; the race of females of the human kind.

Womanless, *a.* Destitute of woman.

Womanliness, *n.* Quality of being womanly.

Womanly, *a.* Becoming a woman; suiting a woman; feminine.

—*adv.* In the manner of a woman.

Womb, (*woom,*) *n.* [A. S. *womb*; O. Ger. *wamba*, the belly.] (*Anat.*) The *uterus*, a hollow symmetrical organ in the female, having the shape of a truncated conoid, and destined to lodge the fœtus from its commencement of conception till birth. It is situate in the pelvis, between the bladder and the rectum above the vagina, and below the convolutions of the small intestine. The *W.* is flattened from before backward, and is nearly an inch in thickness. It is two inches broad at its highest part, and becomes narrower towards the vagina: terminating. In a contracted portion, called the *cervix* or *neck*, to distinguish it from the rest of the organ, called the *body*. From its *fundus* or upper portion, the Fallopian tubes pass off. The mouth is called *Os uteri*, or *Orificum vaginale*. At the point where the body of the *W.* is continuous, below, with the neck, the cavity is slightly constricted, forming what is sometimes termed the *internal orifice*. The cavity of the *W.* is very small, and its parietes are thick. The portion of the cavity corresponding with the body is triangular and flattened. Its superior angles present the extremely fine orifices of the fallopian tubes. The cavity of the neck is slightly dilated before opening into the vagina. The *W.* increases in size and weight from the moment of conception till within a few days of labor: as soon as that process occurs, it immediately contracts, and in a few days recovers its natural size.

—The place where anything is produced.

—Any large or deep cavity.

Wom'bat, *n.* (*Zoöl.*) The common name of the *Phascolomydæ*, a family of *Rodentia*, comprising quadrupeds which have large, flat heads, short legs, and a body that appears as if crushed, and without a tail. They have two incisors in each jaw, similar to those of Rodents, and each of the grinders has two transverse ridges. They are sluggish, feed upon grass, and burrow in the ground. The *W.* is of the size of a badger, and both this and *Lipurus*, a closely related genus, live in Australia.

Fig. 2626. — Wombat. (*Phascolomys ursinus.*)

Womelsdorf, in *Pennsylvania*, a post-borough of Berks co., 14 m. W. of Reading.

Women, (*wim'en,*) *n.*; *pl.* of Woman, *q. v.*

Wonansquatock'et River, in *Rhode Island*, falls into Narragansett Bay from Providence co.

Wonder, (*wun'der,*) *n.* [A.S. *wundor, wonder;* Dn. *wonder;* Ger. *wunder.*] That emotion which causes the mind to turn this way and that way, in order to ascertain the source, cause, or object of that which produces such emotion; the state of mind produced by something unexpected, and at the same time inexplicable; astonishment; amazement; surprise.—Cause of wonder; that which excites surprise; a strange thing; a prodigy; a miracle.

—*v. n.* To be struck with wonder; to be affected by surprise or admiration.

Won'derer, *n.* One who wonders.

Won'derful, *a.* Adapted to excite wonder or admiration; exciting surprise; strange; astonishing.

Won'derfully, *adv.* In a manner to excite wonder.

Won'derfulness, *n.* The state or quality of being wonderful.

Won'deringly, *adv.* In a wondering manner.

Won'derment, *n.* Astonishment; surprise.

Won'derous, *a.* Same as WONDROUS, *q. v.*

Won'derstruck, *a.* Struck with wonder or surprise.

Won'der-work, *n.* A prodigy; a miracle; a wonderful act or work. (R.)

Won'der-work'er, *n.* One who performs wonders or prodigies.

Won'der-work'ing, *a.* Doing wonderful works or acts.

Wondrous, (*wun'drus,*) *a.* Admirable; marvellous; such as may excite surprise and astonishment; strange.

Won'drously, *adv.* In a strange or wonderful manner.

Won'drousness, *n.* The state or quality of being wondrous.

Wonewoc, in *Wisconsin*, a post-township of Juneau co., 65 m. from Madison.

Won't. A colloquial contraction of *would not*, that is, *will not.*

Wont, (*wunt,*) *a.* [A.S. *wænian*, to accustom, from *wenan*, to wean.] Accustomed; habituated; using or doing customarily.

—*n.* Habit; custom; use.

—*v. n.* To be accustomed or habituated; to use; to be used.

Wont'ed, *a.* Accustomed; used; usual.

Wont'edness, *n.* The state of being accustomed. (R.)

Woo, *v. a.* [A.S. *wogan;* Fr. *vouer;* Lat. *vovere.*] To make love to; to solicit in love; to court.—To invite with importunity; to court solicitously.

—*v. n.* To court; to make love.

Wood, *n.* [A.S. *wudu;* Dn. *woud.*] A large and thick collection of trees; a forest;—frequently used in the plural.—The substance of trees.

—Trees cut or sawed for architectural purposes, or for fuel.

(*Bot.*) The solid part of the stems and branches of a plant, as distinguished from the pith which occupies the centre, and the bark which envelops the whole. For its mode of formation, see AGE OF PLANTS.

—*v. a.* To supply with wood as fuel.

—*v. n.* To supply with wood; to take in wood.

Wood, in *Indiana*, a township of Clark co.

Wood, in *Ohio*, a N. N.W. co.; *area*, 623 sq. m. *Rivers.* Maumee and Portage rivers, and Beaver and Toussaint creeks. *Surface*, undulating; *soil*, fertile. *Cap.* Bowling Green. *Pop.* (1897) 51,260.

Wood, in *Texas*, a N.E. co.; *area*, 700 sq. m. *Rivers.* Sabine and the Lake Fork of the same. *Surface*, diversified; *soil*, generally fertile. *Cap.* Quitman. *Pop.* (1897) 14,850.

Wood, in *West Virginia*, a N.W. co., bordering on Ohio; *area*, 375 sq. m. *Rivers.* Ohio, Little Kanawha, and Hughes rivers, and French and Lee's creeks. *Surface*, hilly; *soil*, generally fertile. *Cap.* Parkersburg. *Pop.* (1897) 29,500.

Wood, in *Wisconsin*, a central county; *area*, 828 sq. m. *Rivers.* Wisconsin and Yellow rivers, and Mill creek. *Surface*, diversified; *soil*, moderately fertile. *Cap.* Grand Rapids. *Pop.* (1895) 21,637.

Wood Anem'one, *n.* (*Bot.*) See ANEMONE.

Wood'berry, or WOODBURY, in *Pennsylvania*, a village of Bedford co., 15 m. N.N.E. of Bedford.

Wood'bine, *n.* (*Bot.*) See CISSUS.

Woodbine, in *Illinois*, a post-township of Jo Daviess co. *Pop.* (1897) 940.

Woodbine, in *Maryland*, a post-village of Carroll co., abt. 37 m. W. of Baltimore.

Wood'bourne, in *New York*, a post-village of Sullivan co., 100 m. S.S.W. of Albany.

Wood'bridge, a town of England, co. of Suffolk, on the Deben, 8 m. from Ipswich. It has a considerable traffic, and a dock for building vessels. *Pop.* 5,500.

Woodbridge, in *California*, a post-village of San Joaquin co., 14 m. N. of Stockton.

Woodbridge, in *Connecticut*, a township of New Haven co., 6 m. N.W. of New Haven.

Woodbridge, in *Michigan*, a township of Hillsdale co.; *pop.* abt. 876.

Woodbridge, in *New Jersey*, a post-township of Middlesex co., 38 m. N.E. of Trenton.

Woodbridge, in *Pennsylvania*, a village of Fayette co., 190 m. S.W. of Harrisburg.

Woodburn, in *Illinois*, a post-village of Maconpin co., 15 m. N. of Springfield.

Wood'bury, in *Connecticut*, a p.-vill. and twp. of Litchfield co., 25 m. N.N.W. of New Haven.

Wood'bury, in *Illinois*, a village and township of Cumberland co., 100 m. E.S.E. of Springfield.

Woodbury, in *Iowa*, a W.N.W. co., bordering on Nebraska; *area*, 800 sq. m. *Rivers.* Missouri, Little Sioux, and the West Fork of the Little Sioux. *Surface*, diversified; *soil*, fertile. *Cap.* Sioux City. *Pop.* (1895) 46,202.

Woodbury, in *Kentucky*, a village and twp. of Butler co., 20 m. N.W. of Bowling Green.

Woodbury, in *Minnesota*, a post-township of Washington co.

Woodbury, in *New Jersey*, a city, cap. of Gloucester co., 9 m. S. of Philadelphia. *Pop.* (1895) 3,853.

Woodbury, in *Pennsylvania*, a post-twp. of Bedford co.

Woodbury, in *Tennessee*, a post-village, cap. of Cannon co., 50 m. E.S.E. of Nashville.

Woodbury, in *Vermont*, a post-township of Washington co., 14 m. N.N.E. of Montpelier.

Wood-choir, (*wud'kwīr,*) *n.* The singing-birds of the wood.

Wood'chuck, *n.* (*Zoöl.*) See MARMOT.

Wood'cock, *n.* (*Zoöl.*) A favorite game-bird of the Snipe fam. The American *W.* (*Philohela minor*) "is 11 inches long, and the wing 5¼ inches; the bill very long, the upper mandible longer than the under, and fitted to it at the tip; the eyes far from the bill, and the tail short; the occiput with 3 transverse bands of black, alternating with 3 of pale yellowish-rufous; the upper parts of the body variegated with ashy reddish and black; the under parts pale rufous, bill brown, and legs pale reddish. The *W.* is mainly nocturnal in its habits, seldom taking wing in the full light of day unless disturbed. It walks about, however, and feeds by day as well as by night. Its food is mainly earthworms, of which it swallows as many in a day as would equal its own weight; and hence its favorite resorts are where it can obtain these worms in abundance. The moist grounds which these birds frequent are perfectly filled with *bill-holes* which they have made in probing for worms; and these holes become a guide to the hunter, who looks at their frequency and freshness when he would find good shooting. When flushed by the hunter or the dog, the *W.* ordinarily flies but a short distance, plunging into a clump of bushes or thicket near by, or in thicker part of the swamp. It spends the winter in warm climates, but breeds from the Carolinas to Nova Scotia. The nest, made of dead leaves and grass, is placed under a bush, or beside a fallen trunk. The eggs, which are laid from February to June, according to locality, are usually four, dull yellowish-clay color, irregularly and thickly marked with dark-brown. In three or four weeks from the time the young are hatched, they are able to fly, and when six weeks old, they fly almost as well as the old ones." (*Tenney.*)—The European *W.* (*Scolopax rusticola*), *la bécasse* of the French, found all over Europe, is about 14 inches long. Its plumage resembles that of the American; the head is grayish in front, yellowish-brown with transverse darker brown streaks behind. Its food and habits are the same as those of the American species.

Wood'cock, in *Pennsylvania*, a post-bor. and twp. of Crawford co., 8 m. N.E. of Meadville.

Wood'-craft, *n.* Skill in hunting, or other sports in the woods.

Wood'-cut, *n.* An engraving on wood, or a print or impression from such engraving. See WOOD ENGRAVING.

Wood'-cutter, *n.* A person who cuts wood.—An engraver on wood.

Wood'-duck, or SUMMER DUCK, *n.* (*Zoöl.*) A very beautiful species of duck (*Aix sponsa*), of the section having the hind-toe destitute of membrane, a native of North America. It is found during the breeding season in almost all parts of the United States, and as far N. as Nova Scotia, migrating southwards in winter, when it abounds in Texas and Mexico, but some remain during winter even in Massachusetts. It has been found capable of domestication.

Wood'ed, *a.* Supplied or covered with wood.

Wood'en, *a.* Made of wood; consisting of wood.—Awkward; clumsy

Wood Engraving, *n.* The art of producing raised surfaces by excision on blocks of wood, from which impressions can be transferred to other surfaces, was undoubtedly known to the Egyptians; but they appeared to have used their wooden stamps solely for the purpose of stamping on clay or other ductile material; and the earliest application of *W. E.* to the production of a book is supposed to have been in China, about the middle of the 10th century, and was probably first used for the production of playing-cards, the outlines of which were formed by impressions from wood-cuts, and the coloring filled up by hand. The art made rapid progress; and the next great step was the production of books printed from wooden types, and illustrated with pictorial wood-cuts. Towards the close of the 15th century, the art had attained an excellence which induced artists of celebrity and talent to select it as the means of conveying their designs to the world. From the end of the 16th century the art to a great extent declined; but at the close of the 17th century, a certain Mr. Bewick devoted himself with enthusiasm to the art, and from that time it has continued to flourish. Originally, various kinds of wood, such as plum-tree, beech, mahogany, and pear-tree, were employed for *W. E.*, and are still frequently employed for coarse work; but there is no wood so suitable for this purpose as box, as it combines all the qualities necessary to admit of the most delicate execution. Upon a good piece of the small close-grained English box, the finest line can be preserved in unbroken smoothness. The tools of the wood-cutter consist exclusively of gravers, small gouges, and chisels. The block is placed on a small circular leathern cushion filled with sand, which affords not only a firm rest to the smooth wood, but permits it to be freely turned in all directions. The graver is held and used in a manner peculiar to this kind of engraving. The butt of the handle rests against the palm of the hand, three of the fingers closing round it, while the thumb is projected forward upon the block, serving at once as a rest for the blade and a check to regulate the force in cutting, the motion of the tool being regulated by the forefinger. When an engraved block is damaged, or a serious error made, the only remedy is to drill out the part to the depth of about half the thickness of the wood, and to insert a tight-fitting plug, tapered at the bottom to insure its being driven home. The top of the plug is made level with the surface of the block, and the part redrawn and engraved. The comparative merits of wood and steel engraving have sometimes been much discussed. The fact appears to be, that each is best suited for the production of certain effects. There is a certain mellow richness of tone about a highly finished steel print which cannot be rivalled by an engraving on wood; and on the other hand, the latter is unrivalled for the production of broad bold contrasts and sparkling sketchy effects. The special advantage, however, which *W. E.* possesses over all other forms of graphic art, is its applicability to the purposes of book-illustration in the form of *text-cuts*, that is, cuts inserted and printed in the pages of type.

Wood'ford, in *Illinois*, a N. central co.; *area*, 540 sq. m. *Rivers.* Illinois; also Mackinaw and Crow creeks. *Surface*, undulating; *soil*, fertile. *Products.* Corn, oats, wheat, barley, potatoes, butter, wool, hay, &c. *Min.* Stone-coal. *Cap.* Metamora. *Pop.* (1897) 22,010.

Woodford, in *Kentucky*, a N. central co.; *area*, 247 sq. m. *Rivers.* Kentucky, and the South Fork of Elkhorn. *Surface*, undulating; *soil*, fertile. *Products.* Corn, oats, tobacco, wheat, barley, rye, wool, hemp, hay, &c. *Cap.* Versailles. *Pop.* (1897) 12,950.

Wood'-house, *n.* A house or shed where wood is deposited.

Wood'hull, in *Michigan*, a post-township of Shiawassee co.

Wood'hull, in *New York*, a post-township of Steuben co., 25 m. S.S.W. of Bath.

Wood'iness, *n.* The state or quality of being woody.

Wood Island, in *Maine*, at the entrance of Saco River, has a revolving light on the E. side, 45 ft. above the sea; Lat. 43° 27′ N., Lon. 70° 15′ W.

Wood'land, *n.* Land covered with wood, or land on which trees are suffered to grow, either for fuel or timber.

Woodland, in *California*, a city, cap. of Yolo co., 18 m. N.W. of Sacramento. *Pop.* (1897) 3,450.

Woodland, in *Illinois*, a township of Carroll county.—A township of Fulton county.

Woodland, in *Iowa*, a twp. of Decatur co.

Woodland, in *Michigan*, a post-township of Barry co

Woodland, in *Minnesota*, a township of Wright county.

Woodland, in *Wisconsin*, a township of Sauk county.

Wood'lawn, in *Alabama*, a village and township of Dallas co.

Woodlawn, in *Missouri*, a post-township of Monroe co., 70 m. N. of Jefferson City.

Woodlawn, in *Tennessee*, a post-township of Montgomery co.

Wood'-layer, *n.* A young oak or other tree laid down in a hedge.

Wood'less, *a.* Destitute of wood.

Wood'lessness, *n.* The state of being destitute of wood.

Wood'-louse, *n.* (*Zoöl.*) See ONISCUS.

Wood'man, *n.; pl.* WOODMEN. (Written also *woodsman.*) A sportsman; a hunter.—One who fells timber; a forester; one skilled in the forest.

—In England, one of the men appointed to look to the Queen's woods.

Wood'man, in *Wisconsin*, a post-township of Grant co., 6 m. S.W. of Boscobel.

Wood'mansie, in *New Jersey*, a post-village of Burlington co., E. of Camden.

Wood-note, *n.* A wild, musical note, like that of a forest-bird.

Wood-nymph, *n.* A fabled goddess of the wood; a dryad.

(*Zoöl.*) The common name of the beautiful lepidopterous insects comprising the genus *Eudryas.* The Wood-Nymph (*E. grata*, Fabr.) expands one inch and a half to one inch and three-fourths, the fore wings pure white, with a broad stripe along the front edge for more than half its length, and a broad band around the outer hind margin, of a deep purple-brown, the band edged on the inside with olive green, and marked towards the edge with a wavy white line; under side of the fore wings yellow, with a round and kidney-shaped black spot. The hind wings are yellow, with a broad purplish brown hind border above, on which there is a wavy white line; below they have a central black dot. The caterpillar, which infests the grape-vine, attains one inch and a quarter in length, is blue transversely, banded with deep orange, the bands dotted with black; the top of the eleventh ring is humped.

Wood-opal, *n.* (*Min.*) A variety of opal with a peculiar ligneous structure, which is made into snuff-boxes and other ornamental articles at Vienna.

Wood-pigeon, *n.* (*Zoöl.*) The ring-dove, *Columba palumbus.*

Wood River, in *Rhode Island*, rises in Kent co., and joins the Charles River in Washington co., to form the Pawcatuck River.

Wood'ruff, *n.* (*Bot.*) The common name of the genus *Asperula*, order *Galiaceæ*, containing a number of annual and perennial species, with whorled leaves, natives of the northern parts of the Old World, and distinguished by a funnel-shaped or bell-shaped corolla, a bifid style, and dry didymous fruit

Wood'pecker, *n.* (*Zoöl.*) The common name of all the very numerous scansorial birds comprising the family *Picidæ*. They are well characterized by their striking and peculiar habits, to which their whole structure is singularly adapted. The bill of the *W.* is large, strong, and fitted for its employment; the end of it is sharp and formed like a wedge, with which it pierces the bark of trees, and penetrates through the outside sound wood of the tree, to the inside decayed part, where its food is lodged. (Fig. 2627,) Its neck is short and thick, and furnished with powerful muscles, which enable it to strike with such force as to be heard at a considerable distance; the noise thus occasioned is not by vibration round a hole, as some authors assert, but by a succession of strokes repeated with surprising rapidity. Its tongue is long and taper, and capable of great elongation. At the end of it there is in most of the species a hard horny substance, curving slightly downwards, which penetrates into the crevices of trees, and extracts the insects and their eggs which are lodged there; it is also lubricated by a glutinous secretion. The tail consists of ten stiff, sharp-pointed feathers, rough on the under sides, and bent inwards, by which it supports itself on the trunks of trees while in search of food; for this purpose its feet are short and thick, and its toes, which are placed two forward and two backward, are armed with strong hooked claws, by which it clings firmly, and creeps up and down in all directions. There are several genera, and the American species, some of which are also called *Sapsuckers*, are by far too numerous to be described here.

Fig. 2627. — WOODPECKER.

Wood-rush, *n.* (*Bot.*) See LUZULA.

Wood-screw, (*-skru.*) *n.* The common screw made of iron, and used by carpenters and joiners for fastening together pieces of wood, or wood and metal.

Woodruff's, in *S. Carolina*, a post-township of Spartanburg dist.

Woods, in *Kentucky*, a twp. of Jefferson co.

Woods'field, in *Ohio*, a post-village, cap. of Monroe co., 120 m. E. of Columbus.

Wood's Hole, in *Massachusetts*, a post-village of Barnstable co., 70 m. S.E. of Boston.

Woodside, in *Illinois*, a post-village and township of Sangamon co., 6 m. S.W. of Springfield.

Woodside, in *New Jersey*, a township of Essex county.

Wood'son, in *Kansas*, a S.E. co.; *area*, 504 sq. m. *Rivers*. Neosho and Verdigris. *Surface*, level; *soil*, fertile. *Cap.* Yates Center. *Pop.* (1895) 9,313.

Wood'sonville, in *Kentucky*, an unimportant village of Hart co.

Wood-soot, *n.* Soot from burnt wood. See SOOT.

Wood-sorrel, *n.* (*Bot.*) See OXALIS.

Wood Spirit, WOOD NAPHTHA, METHYLIC ALCOHOL, PROLIGNEOUS ETHER, or PYROXYLIC SPIRIT, *n.* (*Chem.*) The first member of a very important homologous series of alcohols, of which ordinary alcohol or spirit of wine is the type. In order to obtain the Wood Spirit, the portion which distils over below 212° F. is rectified in a still containing chalk, which retains the acetic acid as acetate of lime. The useful application of crude wood spirit depends upon its burning with a nearly smokeless flame in lamps (though as a source of heat only, not of light), and upon its power of dissolving most resinous substances employed in the preparation of varnishes, stiffening for hats, &c.

Wood'stock, a town of England, in Oxfordshire, on the Glyme, 8 m. from Oxford. — Old *W.*, a little to the N. of the present town, was a residence of the early English kings; but no remains of the ancient palace exist. *Pop.* 1,200.

Wood'stock, in *Connecticut*, a village and township of Windham co.

Wood'stock, in *Illinois*, a city, cap. of McHenry co., 51 m. N.W. of Chicago. *Pop.* (1897) 1,950

—A township of Schuyler co.

Wood'stock, in *Maine*, a post-village and township of Oxford co., 45 m. W. of Augusta.

Wood'stock, in *New Hampshire*, a post-vill. and twp. of Grafton co., 50 m. N.W. of Concord.

Wood'stock, in *New York*, a post-vill. and twp. of Ulster co., 50 m. S.S.W. of Albany.

Wood'stock, in *Ohio*, a post-vill. of Champaign co., 32 m. N.W. of Columbia.

Wood'stock, in prov. of Ontario, a town, cap. of Oxford co., 98 m. S.W. of Toronto.

Wood'stock, in *Vermont*, a post-village and township, cap. of Windsor co., 55 m. S.E. of Montpelier.

Wood'stock, in *Virginia*, a post-town, cap. of Shenandoah co., 160 m. N.W. of Richmond.

Wood'stone, PETRIFIED STONE, AGATIZED WOOD, *n.* A mineral of fibrous texture, with the fibers intertwined like those of wood, essentially composed of silicious earth supposed to have been gradually deposited as the vegetable matter was decomposed and removed.

Woods'town, in *New Jersey*, a post-borough of Salem co., 55 m. S.S.W. of Trenton.

Woods'ville, in *New Jersey*, a post-village of Mercer co., 13 m. N. of Trenton.

Wood'ville, in *Illinois*, a post-village of Adams co., 95 m. W.N.W. of Springfield.

—A township of Greene co.

Wood'ville, in *Minnesota*, a township of Waseca co.

Wood'ville, in *Mississippi*, a post-town, cap. of Wilkinson co., 35 m. S. of Natchez.

Wood'ville, in *North Carolina*, a village and township of Bertie co.

—A post-village of Perquimans co., 205 miles E.N.E. of Raleigh.

Wood'ville, in *Ohio*, a village of Clermont co.

—A post-village of Sandusky co., 120 m. N.W. of Columbus.

Wood'ville, in *Pennsylvania*, a village of Butler co., 20 m. N. of Pittsburg.

Wood'ville, in *Virginia*, a post-village of Rappahannock co., 115 m. N.W. of Richmond.

Wood'ville, in *Wisconsin*, a township of Calumet county.

Wood-vinegar, *n.* Diluted acetic acid, containing 6¼ per cent. of monohydrated acetic acid.

Wood'ward, in *Pennsylvania* a, township of Clearfield county.—A township of Clinton county.—A township of Lycoming county.

Wood'wardsville, in *New Jersey*, a village of Burlington co.

Woodwardsville, in *New York*, a village of Essex co., 100 m. N. of Albany.

Wood'-wasp, *n.* (*Zoöl.*) See CRABRO.

Wood'-waxen, *n.* (*Bot.*) The Dyer's brown. See GENISTA.

Wood'-work, (*-wurk,*) *n.* That part of any structure which is made of wood.

Wood'y, *a.* Abounding with wood. — Consisting of wood; lignoous.— Pertaining to woods; sylvan.

Wood'y Fibre, *n.* (*Bot.*) The name given to very slender transparent membranous tubes, taperiug acutely to each end, lying in bundles in the tissue of plants, and having no direct communication with each other. They are of extreme tenuity, and form the substances called *hemp* and *flax*. The same tissue forms wood.

Wood'y-night'shade, *n.* (*Bot.*) *Solanum dulcamara*. See SOLANUM.

Woo'er, *n.* One who courts or solicits in love.

Woof, *n.* [A. S. *weft*, from *wefan*, to weave.] The threads that cross the warp in weaving.— Cloth; texture.

Woof'y, *a.* Having a close texture.

Woo'ingly, *adv.* Enticingly; with persuasiveness; so as to invite to stay.

Wool, *n.* [A. S. *wul, wull;* O. Ger. *wolla;* Gr. *ioulos*, down.] A term used somewhat indefinitely, but more generally applied to the fleecy coat, or soft hair of the sheep. *W.* has always formed the principal material of the clothing of mankind in most temperate regions. The filaments of *W.* taken from a healthy sheep present a beautifully polished and even glittering appearance. The fibres of *W.* are either straight or crooked. The division into locks formed by the coherence of the single fibres, varies in every species of *W.*, and forms what is called the *staple*. The body of *W.* which is born in connection from one animal is called a *fleece*. The *W.* of the same animal differs much on the various parts of the body; that on the back and sides is the best. The great difference in the *W.* of different sheep depends in general upon their descent, the crossing of breeds, climate, food, and manner of living; and among the individual animals of the same breed, upon age, sex, and outward circumstances; the *W.* is, therefore, divided into coarse *W.*, which is long, either straight or irregularly curled, and fine wool, which is regularly curled. Eight or ten different kinds are frequently found in a single fleece. The qualities which mainly govern the classification and commercial value of *W.* are:—1. The fineness of the fibre; 2. its softness and elasticity; 3. soundness of staple; 4. color; 5. cleanness; 6. length of staple. The average diameter of the coarsest of the *W.* used in the arts is 1-450th of an inch, while that of the finer sorts of *W.* ranges from 1-1100th to 1-1300th of an inch in diameter. If a lock of *W.* be held up to the light, it will be perceived that all its fibres are twisted into corkscrew-like ringlets; and if the fibres be subjected to a powerful microscope, they will be seen to consist of central stems, from which spring circlets of tiny leaf-shaped projections. In the finer sorts of *W.* these projections present at first the appearance of minute serrations, like the teeth of a saw, but on closer inspection they resolve themselves into leaves or scales. These imbrications form an important element of the felting properties of wool. See SHEEP.

(*Manuf.*) After the bags of wool are delivered at the manufactory, they are first *sorted*, or divided into various qualities, generally called *prime*s, *seconds*, and *thirds*. The wool is then scoured or washed, to get rid of the animal grease. This is done at the dye-house, with stale urine, heated to about 120°, and which is afterwards washed out in running water. The wool is now fit for dyeing, or it may be deferred until the cloth is woven: in the one case, the cloth is said to be *wool-dyed;* in the other, *piece-dyed*. After the wool is dyed, it is passed through the *twilly-devil*, or *tucker*, which consists of a large wooden cylinder, having strong iron spikes, about three inches long, projecting from it, in a spiral direction, round its circumference. The wool, passing between feeding-rollers, is exposed to the action of the spiked cylinder, which, revolving with great rapidity, tears apart the fibres of the wool, and allows any dust or dirt to fall through a grating beneath. After this, the wool is picked over, in order to remove seeds, pieces of string, or other substances. This process is now generally performed by what is called the *burring-machine*. After the wool has been picked, it is oiled, previous to passing through the *scribbler* and *carder*, which is very similar in principle to the carding-machine used in the cotton manufacture. The rovings produced by the carder are the first commencement of the thread; but in order to obtain strength, they require to be twisted, and for this purpose are submitted to the action of the *slubbing-billy*. The threads are now ready for weaving into cloth. The first operation which the cloth undergoes after it is woven is *braying*, the object of which is to get rid of the oil used preparatory to spinning. The cloth is then *milled*, *i. e.*, the fibres of the cloth are felted together, and the whole surface of it covered with a thick, fulled face, by means of being submitted to the action of soap and water. After this process comes that of *teazling*, by which the cloth is roughed both ways by the prickly flower-heads of the teazle. The filaments drawn out by teazling are of unequal length, and require to be shorn to make them level. The next of the finishing processes is to arrange the cloth in regular folds, and submit it to the action of an hydrostatic press.

(*Statistics.*) The production of wool in the U. S. was in 1870, 162,000,000; 1880, 232,500,000; 1890, 276,000,000; 1900, 288,635,621 lbs. In the last named year there were imported 76,736,209 lbs. Consumption within the U. S 436,642,519 lbs. In 1900 there were in the U. S. 41,883,065 sheep yielding 288,636,621 lbs. of wool. The total wool product of the world was 2,699,844,704 lbs., viz.: North America, 319,502,328; South America, 510,000,000; Europe, 946,907,376; Asia, 274,000,000; Africa, 134,425,000; Australasia, 510,050,000.

Wool, JOHN ELLIS, an American general, B. in Newburg, N. Y., 1789. On the breaking out of the war of 1812, he obtained a captain's commission, and distinguished himself at the storming of Queenstown Heights, where he was severely wounded, and for which he was promoted to the rank of major, and also at the battles of Plattsburg and Beekmantown, and for his gallantry in the last of these actions he was brevetted lieutenant-colonel. At the end of the war, *W.* was retained in the regular army; in 1818 appointed lieutenant-colonel, and in 1826 brevet brigadier-general. In 1832 he was sent to Europe, to examine the military systems of the principal nations, and was everywhere received with marked respect. On his return, he was appointed to inspect the coast defences, and in 1836 was charged with the removal of the Cherokee Indians to Arkansas. At the breaking out of the Mexican war, Gen. *W.* was assigned the duty of organizing the volunteers, after which, with a body of 3,000 troops, he set out for the seat of war, where he distinguished himself by the strict discipline and order which he enforced. He was in a measure instrumental in gaining the battle of Buena Vista, for which he was favorably mentioned by General Taylor and brevetted major-general, besides receiving the thanks of Congress and being presented with a sword. At the close of the war he remained in command of Monterey until order was restored. He was afterwards transferred to the dept. of the Pacific. At the commencement of the late Civil War, he hastened to offer his services to the government, and was sent to New York to organize the volunteers. He took the responsibility of reinforcing Fortress Monroe, and thus saved that important post. In Aug., 1861, he was appointed to the dept. of Virginia, and afterwards to the command of the Middle Department, with his headquarters at Baltimore. In May, 1862, he was promoted to the rank of major-general of the regular army. D. in Troy, N. Y., Nov. 10, 1869.

Wool'-burler, *n.* One who removes the little knots or extraneous matters from wool, and from woollen cloth.

Woold, *v. a.* [D. *woelen;* Ger. *wühlen.*] (*Naut.*) To strengthen a made or started spar, by winding tarred rope tightly round it at the weak or suspected place.

Wool'-driver, *n.* A trader in wool.

Wool'-dyed, *p. a.* Dyed in the yarn before making up; not piece-dyed.

Wool'fell, Wool'fel, *n.* A skin not stripped of the wool.

Wool'-gathering, *a.* Indulging in idle fancies; listless; dreamy; inattentive.

—*n.* Idle indulgence of the imagination; vagary.

Wool'-grower, *n.* A person who raises sheep for the production of wool.

Wool'-growing, *a.* Producing sheep and wool.

Wool'-hall, *n.* A wool-market.

Woolled, (*woold,*) *a.* Having wool; as, fine-*woolled* sheep.

Wool'len, Wool'en, *a.* Made of wool; consisting of wool.— Pertaining to wool.

—*n.* Cloth made of wool.

Wool'len-draper, *n.* A dealer in woollen goods.

Woollenet', *n.* A thin, texile fabric made of wool.

Wool'len-scribblers, *n. pl.* Machines for combing wool into thin, downy, translucent layers.

Wool'liness, *n.* The state of being woolly.

Wool'ly, *a.* Consisting of wool.— Resembling, or clothed with, wool.

Wool'ly-head, *n.* A negro. (A cant term.)

Wool'man, *n.*; *pl.* WOOLMEN. A dealer in wool.
Wool'-pack, *n.* A large pack or bale of wool weighing 240 lbs. — Anything thick, bulky, but light.
Wool'-sack, *n.* A sack or bag of wool. — The seat of the lord-chancellor in the House of Lords, on account of its being a large, square bag of wool, without back or arms, covered with red cloth.
Wool'-stapler, Wool'-winder, *n.* A wholesale dealer in wool; a sorter of wool.
Wool'-stock, *n.* A heavy wooden hammer for milling cloth, or driving the threads of the web together. *Sm'ds.*
Woolwich, (*wool'ij,*) a town and naval station of England, in the county of Kent, on the Thames, 8 m. from London. This place was originally only a small village, inhabited by fishermen, and owes its consequence to the establishment of a royal dock, in the reign of Henry VIII. Since that time it has gradually risen to its present importance; but its progress has been more particularly rapid during the past century, in consequence of the establishment of the arsenal and the augmentation of the royal artillery. Its dock-yard is the most ancient in Great Britain, and is supplied with all that is necessary for the building and equipping of ships of war; but, from the shallowness of the water in the river, such ships are mostly built at other naval ports, and this yard kept for the construction of steamers. The royal arsenal contains in its model-room a pattern of every article made use of in the artillery service. This arsenal is the grand British depôt for every species of ordnance, both military and naval, covering more than 100 acres, and containing about 25,000 pieces of ordnance. It is the largest arsenal in Great Britain, and has extensive stores of gun-carriages, military wagons, and everything which appertains to the department of ordnance. It is the head-quarters of the royal horse and foot artillery, and the royal sappers and miners, for whom, with the other corps, extensive barracks are provided. Here also is the Royal Military Academy, which was instituted in 1741. In the Thames, opposite the dock-yards, are the hulks for the reception of convicts sentenced to hard labor; they are employed on government works. *Pop.* (1897) 107,650.
Wool'wich, in *Maine*, a post-township of Sagadahoc co., 25 m. S. of Augusta.
Woolwich, in *New Jersey*, a township of Gloucester co.
Woonsock'et, in *Rhode Island*, a city of Providence co., 16 m. N.W. of Providence. It contains numerous cotton mills, machine shops, iron foundries and manufactures of spool-thread, sewing-silk and fringes, jewelry, musical instruments, stoves, &c. *Pop.* (1897) 32,330.
Woor'aly, Wou'ri, *n.* A virulent poison from South America, having the characteristics of strychnia.
Woos'ter, in *Indiana*, a post-village of Kosciusko co., 9 m. S.E. of Warsaw.
—A village of Scott co., 80 m. S.E. of Indianapolis.
Wooster, in *Iowa*, a village of Jefferson co., about 9 m. S.E. of Fairfield.
Wooster, in *Ohio*, a city, cap. of Wayne co., 90 m. N.E. of Columbus. *Pop.* (1897) 6,650.
Woo'sung, in *Illinois*, a post-village of Ogle co., 7 m. N.N.W. of Dixon.
Wootz, *n.* (*Metall.*) A species of steel of excellent quality, imported from India, and of which it is believed that the celebrated Damascus sword-blades were made. It is made by melting small pieces of wrought iron mixed with some twigs from a tree, and covered by a green leaf, in small crucibles luted close with clay; these crucibles are then built up in a pyramidal form in a furnace, and exposed to a strong heat. The pieces of *W.* are taken out after the crucibles are cooled, and are of the size of about half a hen's egg. To form a Damascus sword-blade, each piece of *W.* was drawn out under the hammer into a thin riband, and a bundle of them was then welded together. *W.* has been known from remote antiquity. It contains traces of silica and aluminium.
Worcester, JOSEPH EMERSON, LL.D., (*woos'ter,*) an American lexicographer, b. in Bedford, N. H., 1784. He graduated at Yale College, 1811, and for several years afterwards taught in Salem. His great work is his *Dictionary of the English Language*, 4to, Boston, which has taken its rank among the best works of the kind. Among his other works are: *Geographical Dictionary, or Universal Gazetteer*, 2 vols., 1817; *Gazetteer of the United States*, 1818; *Elements of History, Ancient and Modern*, 1828. Dr. *W.* was a Fellow of the American Academy of Sciences, a corresponding member of the Royal Geographical Society in London, and a member of other learned bodies. D. Oct. 27, 1865.
Worcester, a city of England, and the chief town of Worcestershire, beautifully situated on the E. bank of the Severn. Its principal object of interest is the cathedral, a noble specimen of Gothic simplicity, which was consecrated in 1218. The outside is extremely plain, and devoid of ornaments; its beauty consisting in its height, space, and the lightness of its architecture. In shape the cathedral is a double cross, with a length of 514 feet, a breadth of 78, and a height of 68, the entire tower rising to an altitude of 200 feet. *Manuf.* Gloves, lace, nails, spirits, leather, and porcelain. *Pop.* 33,226.
Worcester, in *Maryland*, a S.E. co., bordering on Delaware and the Atlantic Ocean; *area*, 475 sq. m. *Rivers.* Pocomoke and St. Martin's. *Surface*, level; *soil*, moderately fertile. *Cap.* Snow Hill. *Pop.* (1897) 21,250.
Worcester, in *Massachusetts*, a central co; *area*, 1,551 sq. m. *Rivers.* Miller's, Chicopee, Blackstone, Nashua, and Thames. *Surface*, undulating; *soil*, fertile. *Pop.* (1895) 306,307.—A city, cap. of the above co., 55 m. E.N.E. of Springfield; Lat. 42° 16′ 17″ N., Lon. 71° 48′ 1.9″ W. It is regularly laid out, with wide and pleasant streets. *W.* is the point of junction of 6 lines of railroad, and contains extensive manufactories of steel and iron wire, cotton and woollen goods, mechanic's tools, agricultural implements, boots and shoes, fire-arms, machinery of every description, &c. The college of the Holy Cross, founded by the Jesuits in 1843, has a library of 5,000 vols. *W.* has also an academy; a female collegiate institute; the Oread institute; a seminary for girls; and a public high school. The State lunatic asylum is situated there. The American Antiquarian Society, founded here in 1812, has a library of about 35,000 vols., and a valuable collection of antiquities. *W.* has also a free public library of about 25,000 vols. *Pop.* (1895) 98,687.
Worcester, in *New York*, a post-village and township of Otsego co., 55 m. S.W. of Albany.
Worcester, in *Pennsylvania*, a post-township of Montgomery co., 7 m. N. of Norristown.
Worcester, in *Vermont*, a post-township of Washington co., 10 m. N. of Montpelier.
Worces'tershire, an inland co., in the west of England, bounded N. by Staffordshire, S. by Gloucestershire, W. by Herefordshire and Shropshire, and E. by Warwick; *area*, 765 sq. m. Worcester is one of the most varied, fertile, and beautiful counties in England, the salubrity of its climate being only exceeded by the richness and abundance of its soil. The most important manufactures are carpets, lace, gloves, nails, malt, cider, perry, salt, sheet and bar iron, and oil cake. Chief town, Worcester.
Word, (*wurd,*) *n.* [A. S. *word, wyrd*; Du. *woord*; Ger. *wort.*] An articulate or vocal sound, or a combination of such sounds, uttered by the human voice, and expressing an idea or ideas; a single component part of human speech or language. — The letter or letters, written or printed, which represent a sound or combination of sounds. — Talk; discourse; language. — Verbal contention; dispute. — Living speech; oral expression; promise. — Signal; order; command; military token. — Account; tidings; message. — Declaration or purpose expressed; declaration or affirmation.
—The Scripture; divine revelation, or any part of it; Christ. — A motto; a short sentence; a proverb.
By word of mouth, orally; by direct expression of language. — *Compound word*, a word formed of two or more single words. — *Good word*, a recommendation; a favorable notice or account. — *In a word*, briefly. — *In word*, in declaration only. — *Word for word*, literally; in the exact words.
—*v. a.* To express in words; to style; to phrase. — To meet with talk instead of action.
Word'-book, *n.* A vocabulary; a dictionary.
Word'-catcher, *n.* A person who cavils at words.
Word'ily, *adv.* In a verbose or wordy manner.
Word'iness, *n.* The state or quality of abounding with words.
Word'ing, *n.* The act or manner of expressing in words.
Word'less, *a.* Silent; not using words.
Word'-painting, *n.* The act of describing anything by words, so vividly as to present it to the mind as if painted.
Words'worth, WILLIAM, an English poet, b. at Cockermouth, Cumberland, 1770, was the son of an attorney, and became a student of St. John's College, Cambridge, where he took his B. A. degree in 1791. *W.* gave his first poetic effusions to the world in 1793, under the title of *An Evening Walk*; in 1798, *Lyrical Ballads* appeared, the joint but uneven production of *W.* and Coleridge. From this time up to 1815 he published a new edition of *Lyrical Ballads*, *Sonnets*, *Essays on Epitaphs*, *The Excursion*, *The Prelude*, *Peter Bell*, *The Waggoner*,

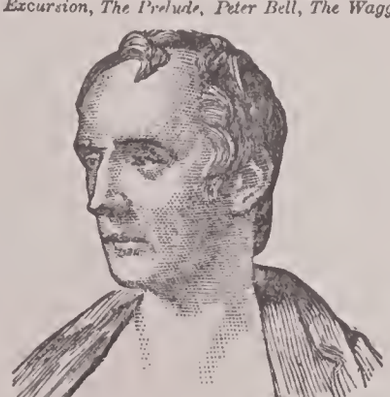


Fig. 2628. — WORDSWORTH.

and many minor pieces. About this time he received the appointment of distributor of stamps, and in 1843 he obtained the office of poet-laureate, vacant by the death of Southey. D. 1850. "The influence of *W.*," says an eminent critic, "on the literature, and especially on the English poetry, has been immense, and it is far yet from being exhausted. The regenerating power of his genius has so operated upon the public taste, that the pure, the simple, and the good, are now the more regarded elements of poetry." For many years *W.* enjoyed that guerdon of love and admiration which are too frequently reserved for departed genius; and thousands of his admirers made a pilgrimage to the poet's home, Rydal Mount. His autobiographical poem, *The Prelude, or the Growth of a Poet's Mind*, was a posthumous publication. Memoirs of *W.* were published soon after his death by his nephew, Canon Wordsworth. The complete poetical works of *W.*, edited by the late Henry Reed, professor of Literature in the University of Pennsylvania, were published in Philadelphia about 1870. Mr. Reed, in returning from a pilgrimage to Rydal Mount, was unfortunately lost in the ill-fated steamer *Arctic*, in September, 1854.
Word'y, *a.* Using many words; verbose. — Containing many words; full of words.
Work, *n.* [A. S. *weorc, worc*; Du., Sw., and Ger. *werk*; Gr. *ergon.*] Something produced by toil, whether mental or bodily; labor; employment. — Exertion of strength, particularly in man; manual labor. — That which is made or done; the effect of labor; the product of labor. — Embroidery; flowers or figures wrought with the needle; any fabric or manufacture; the matter on which one is at work. — Action; deed; feat; achievement; operation; management; treatment. — Literary performance. — A piece of mechanism.
(*Mech.*) The work performed by any force is measured by the product of the force into the space through which it is exerted. The *unit of work* is called the *foot-pound*, and is that which is performed in raising a pound weight, in opposition to gravity, to a height of one foot. The work required to raise five pounds to a height of ten feet, therefore, is fifty *foot-pounds*.
(*Mining*) A term applied to ores before they are cleaned and dressed.
(*Theol.*) Moral duties, internal or external; — the actions of a moral, as distinguished from those of a Christian life.
To go to work, to commence operations. — *To set to work*, to employ.
—*v. a.* To produce by toil, either mental or bodily; to form by labor; to mould, shape, or manufacture.
—To bring into any state by action. — To influence by acting upon; to manage; to lead. — To make by action, labor, or violence. — To manage or direct in a state of motion; to put in motion. — To produce by action, labor, or exertion; to effect by labor in some particular manner, as by the needle; to embroider. — To direct the movements of, as of a ship. — To put to labor; to exert. — To cause to ferment, as liquor.
To work a passage. (*Naut.*) To pay for the passage by performing labor.
To work in or *into*, to insert; to interweave; to insinuate. — *To work off*, to remove gradually, as by labor. — *To work out*, to effect by labor or exertion.
—*v. n.* To be in action, so as to produce something by toil, either mental or bodily; to labor; to toil; to be occupied in performing manual labor, whether severe or moderate. — To act; to carry on operations; to operate; to carry on business. — To be customarily engaged or employed in. — To act internally; to ferment. — To produce effects by action or influence. — To act or operate on the stomach and bowels, as a cathartic. — To be tossed or agitated; to influence.
To work at, to be employed in or upon. — *To work to windward.* (*Naut.*) To fly against the wind; to beat.
Work'able, *a.* That can be worked, as a metal. — That can be worked, or that is worth working, as a mine.
Work'-bag, *n.* A bag used for holding instruments or materials for work, such as needle-work, &c.
Work'-day, *n.* A working-day.
Work'er, *n.* One who, or that which, works or performs. — A working-bee.
Work'-fellow, *n.* A fellow-laborer.
Work'-folk, Work'-folks, *n. pl.* Laboring people.
Work'-house, *n.* A house for work, a manufactory; a house for the poor, where suitable food, clothing, and employment are provided.
Work'ing, *a.* Acting; operating; laboring; devoted to bodily toil; fermenting.
—*n.* Act of laboring.
Work'ing-beam, *n.* (*Steam Engine.*) See BEAM.
Work'ing-day, *n.* [*Work* and *day.*] A day on which labor is performed, as distinguished from the Sabbath, holidays, &c.
—*a.* Laborious; plodding; common; coarse; gross.
Work'ington, a seaport-town of England, in Cumberland, near where the River Derwent falls into the ocean, 7 m. from Whitehaven. To the coal-mines in the vicinity, *W.* owes all its importance. *Pop.* 6,46[illegible].
Work'man, *n.* Any man employed in manual work or labor; a skilful artificer or mechanic; a laborer.
Work'manlike, *a.* Like a workman; skilful; well performed.
Work'manly, *a.* Skilful; well performed; workmanlike.
—*adv.* Skilfully. (R.)
Work'manship, *n.* Skill or art of a workman; the degree or style of art; dexterity; manufacture; something made, particularly by manual labor; that which is effected, made, or produced.
Work'-master, *n.* A performer of any work; a workman.
Work'shop, *n.* A shop where a workman, a mechanic, or artificer, or a number of such individuals, carry on their work.
Work'sop, a town of England, in Nottinghamshire, 24 m. from Nottingham, at the N. extremity of Sherwood Forest; *pop.* 7,000.
Work'-table, *n.* A small table used by ladies at their needle-work.
Work'-woman, *n.* A woman skilled in needle-work. — A woman who works for hire.
World, *n.* [A. S. *woruld, world*; Ger. *welt.*] The universe; the whole system of created globes or vast bodies of matter. — The earth; the terraqueous globe; — sometimes called the lower world. — The heavens, as when we speak of the heavenly world, or upper world. — Sys-

tems of beings, or the orbs which occupy space, and all the beings which inhabit them.—Present state of existence; a secular life; public life or society: business or trouble of life.—A great multitude or quantity; mankind; people in general.—Course of life; the customs and manners of men; the practice of life.—All that the world contains; a large tract of country; a wide compass of things; any large portion of the earth; as, the *Old World*, the *New World*.—The inhabitants of the earth; the whole human race; the carnal state or corruption of the earth; the ungodly part of the world.—Time:—only used in the phrase *world without end*. See GLOBE.

World'liness, *n.* State of being worldly; a predominant passion for obtaining the good things of life; covetousness; addictedness to gain and temporal enjoyments.

World'ling, *n.* One devoted to this world, or to worldly gain and pleasures.

World'ly, *a.* Relating to this world, or to this life, in contradistinction to the life to come; secular; temporal; devoted to this life and its enjoyments; not attentive to a future state; bent on gain; human; commou; belonging to the world.

World'-wide, *a.* Co-extensive with the world.

Worm, (*wêrm,*) *n.* [A.S. *wyrm, worm;* Lat. *vermis.*] That which creeps or crawls; any small creeping animal or reptile, either entirely without feet, or with very short ones.—Remorse; that which incessantly gnaws the conscience; that which torments.—A being debased and despised.—A spiral instrument, resembling a double cork-screw, fixed on the end of a staff, and used for drawing wads or cartridges from guns.—Anything spiral, as the threads of screws; a spiral, leaden pipe placed in a tub of water, through which the vapor passes in distillation, and in which it is cooled and condensed; a supposed small worm-like ligament situated beneath a dog's tongue.

—*pl.* (*Zoöl.*) The lowest class of articulated animals, corresponding to the ANNULOSA, *q. v.* See, also, ANNELIDÆ, LUMBRICINÆ, NEMATOIDS, TAPE-WORM, &c.

—*v. n.* To work slowly, gradually, and secretly.

—*v. a.* To cut something, called a worm, from under the tongue of a dog; to expel or undermine by slow and secret means; to draw the wad or cartridge from a gun; to clean by the instrument called a worm.

Worm'-fence, *n.* A rail fence constructed in a zig-zag manner.

Worm'-grass, *n.* (*Bot.*) See SPIGELIA.

Worm'leysburg, in *Pennsylvania*, a village of Cumberland co., 1 m. S.W. of Harrisburg.

Worms, (*werms,*) a city of Germany, in Hesse-Darmstadt, on the Rhine, 25 m. from Mayence. Its streets are dark and narrow, and its cathedral is a ponderous Gothic building, with dismantled walls. The public buildings are the Mint and the Town-house, in which Luther appeared before the Diet in 1521. (See LUTHER.)—*Manuf.* Tobacco, with a trade in agricultural produce. *W.* was formerly an imperial city, and is very ancient. In the 13th century the population is said to have been 60,000. It is famous for the many diets which have been held in it, the most celebrated of which was that convoked by Maximilian I. in 1495, at which a perpetual public peace was established, and that of 1521. *Pop.* 10,672.

Worm'-seed, *n.* (*Med.*) Same as *Semen contra.* See SEMEN.

Worm'-shaped, *a.* Thick and almost cylindrical, but bent in different places; vermicular.

Worm'-tea, *n.* (*Med.*) A preparation consisting of pink-root, senna, manna, and savine, in various proportions. It is much used as an anthelmintic.

Worm'-wheel, *n.* (*Mech.*) A wheel with teeth to fit into the spiral parts of a screw.

Worm'wood, *n.* (*Bot.*) See ARTEMISIA.

Worm'y, *a.* Relating to worms; abounding with worms.

Worn, *pp.* from WEAR, *q. v.*

Wor'nil, Wor'mul, *n.* A tumor on the back of cattle, occasioned by an insect that punctures the skin.

Worn'-out, *a.* Destroyed or much injured by wear; trite.

Woronzoff, MICHAEL SEMENOVITCH, PRINCE, (*wo-ron'-zoff,*) an eminent Russian statesman and general, b. of an illustrious family at Moscow, 1782. He entered the Russian army in 1801, served against the Turks, and distinguished himself in the great war with France. He was severely wounded at Borodino, and commanded the cavalry at the battle of Leipsic, Oct., 1813. Ten years later he was named governor of New Russia and Bessarabia, and in 1844 governor of the Caucasus. He carried on the war with the heroic mountain-tribes, and took Shamyl's stronghold, Dargo. D. at Odessa, 1856.

Wor'rier, *n.* One who worries.

Wor'ry, *v. a.* [Ger. *würgen,* to choke.] To compress the throat of; to strangle; to suffocate; to tear; to mangle with the teeth; to tease; to trouble; to harass with importunity, or with care and anxiety; to fatigue; to harass with labor; to vex; to persecute brutally.

—*n.* Perplexity; trouble; vexation.

Wor'ryingly, *adv.* In a worrying manner.

Worse, (*wers,*) *a.* [A.S. *wyrse.*] More evil; bad or ill in a greater degree; more depraved and corrupt (in a moral sense); in regard to health, more sick.

—*adv.* In a manner more evil or bad.

—*n.* Not the advantage; not the better; the loss.

Wor'ship, *n.* [A.S. *weorthscipe.*] A title of honor, used in addresses to certain magistrates, and others of rank or station; the act of paying divine honors to the Supreme Being; or the reverence or homage paid to him in religious exercises, consisting in adoration, confession, prayer, thanksgiving, and the like.—The homage paid to idols or false gods by pagans; idolatry of inferiors.—Obsequious or submissive respect; unbounded admiration; as, *hero-worship.*

—*v. a.* (*imp.* and *pp.* WORSHIPED; *ppr.* WORSHIPING;—often, but incorrectly, written *worshipped* and *worshipping.*) To attribute worthiness to; to adore; to pay divine honors to; to reverence with supreme respect and veneration; to respect; to honor; to treat with civil reverence; to honor with extravagant love and extreme submission.

—*v. n.* To perform acts of adoration; to perform religious service.

Wor'shipable, *a.* Capable of being worshipped. (R.)

Wor'shiper, (also, but improperly, written WORSHIPPER,) *n.* One who worships; one who pays divine honors to any being; one who adores.

Wor'shipful, *a.* Claiming worship; claiming respect; worthy of honor from its character or dignity; a term of respect, especially applied to magistrates and corporate bodies.

Wor'shipfully, *adv.* In a worshipful manner; with respect.

Wor'shipfulness, *n.* The state or quality of being worshipful.

Worst, (*wurst.*) *a.* (Superl. of *worse,* q. v.) Evil in a very high or in the highest degree; most bad; most evil; most severe or dangerous; most difficult to heal; most afflictive, pernicious, or calamitous.

—*n.* The most evil state; the most severe or aggravated state; the height; the most calamitous state.

—*v. a.* To get the advantage over in contest; to defeat; to overthrow.

Worsted, (*wust'ed.*) *n.* Yarn spun from combed wool, and which, in the spinning, is twisted harder than ordinary.

Wort, (*wurt,*) *n.* [A.S. *wyrt;* O.Ger. *wurz;* Goth. *aurts,* an herb, plant.] A plant; an herb; now used chiefly, or wholly, in compounds, as in *mugwort, liverwort,* &c.

—New beer unfermented, or in the act of fermentation; the sweet infusion of malt or grain.

Worth, WILLIAM JENKINS, an American general, b. in Hudson, Columbia co., N. Y., March 1, 1794. He received but a scanty education, and on the breaking out of the war of 1812, he entered the army as a private soldier. He was appointed 2d lieut. of infantry in 1813, was aide-de-camp to Gen. Lowie the same year, and Gen. Scott in 1814; and the same year received the brevets of Captain and Major for gallant conduct at the battle of Chippewa, July 5th, and at that of Lundy's Lane, July 25th, at which latter he was severely wounded. He was promoted to the rank of major in 1832, and to that of Colonel in 1838. In 1841, he assumed the command of the Florida war, which he brought to a successful termination after several severe conflicts. At the outbreak of the Mexican war, he joined the command of General Taylor, and distinguished himself at the storming of Monterey, for which he received the brevet of Major-general, and a sword from Congress. He also distinguished himself at Cerro-Gordo, Puebla, Cherubusco, the capture of Vera Cruz, Molino-del-Rey, and in storming the San Cosmo gate of Mexico. At the close of the war he was placed in command of the South-West. He was presented with a sword by the states of New York and Louisiana, and by his native co., besides a vote of thanks from Florida. D. in San Antonio, Texas, 1849. A monument was erected to his memory by the city of New York, where his remains are interred.

Worth, (*wurth,*) *n.* [A.S, *weorth, wurth, weorthan,* to become; Ger. *werth.*] Value; price; rate; that quality of a thing which renders it useful, or which will produce an equivalent good in some other thing.—Value of mental qualities; desert; merit; excellence; virtue; usefulness; as, a man or magistrate of great *worth;* importance; valuable qualities.

—*a.* Equal in price to; equal in value to.—Deserving of, (in a good or bad sense, but chiefly in a good sense.)—Equal in possessions to; having estate to the value of.

Worth, in *Georgia,* a S.W. co.; *area,* 700 sq. m. It is bordered on the N.W. by Flint River. *Surface,* level; *soil,* fertile. *Cap.* Isabella.

Worth, in *Illinois,* a township of Cook co., abt. 9 m. S.W. of Chicago.

Worth, in the State of *Illinois,* a township of Woodford county.

Worth, in *Indiana,* a township of Boone co.—A township of Hancock co.

Worth, in *Iowa,* a N. county, bordering on Minnesota. *Area,* 408 sq. m. It is drained by Lime and Shell Rock creek. *Surface,* undulating; *soil,* fertile. *Cap.* Northwood. *Pop.* (1895) 10,285.

Worth, in *Michigan,* a township of Sanilac co., abt. 1 m. S. of Lexington.

Worth, in *Missouri,* a N. county, bordering on Iowa. *Area,* 275 sq. m. It is drained by Grand River. *Surface,* undulating. *Soil,* generally fertile. *Cap.* Grant City.

Worth, in *N. York,* a twp. of Jefferson co.

Worth, in *Pennsylvania,* a township of Butler county.—A township of centre county.—A township of Jefferson county.—A post-township of Mercer county.

Wor'thily, *adv.* In a manner suited to; deservedly; according to merit; justly; not without cause.

Wor'thiness, *n.* The state or quality of being worthy; worth; desert; merit; excellence; dignity; virtue.

Worthing, (*wer-thing,*) a maritime town of England, in Sussex co., 11 m. from Brighton; *pop.* 5,600.

Wor'thington, in *Massachusetts,* a post-township of Hampshire co., 100 m. W. of Boston.

Worthington, in *Ohio,* a post-village of Franklin county, 9 miles N. of Columbus.—A township of Richland co.

Wor'thington, in *Pennsylvania,* a post-borough of Armstrong co., 6 m. W. of Kittanning.

Worthington, in *W. Virginia,* a post-village of Marion co.

Worth'less, *a.* Having no worth or value; having no value of character or no virtue; having no dignity or excellence.

Worth'lessly, *adv.* In a worthless manner.

Worth'lessness, *n.* The state or quality of being worthless; want of value; want of useful qualities; want of excellence or dignity.

Worth'ville, in *New York,* a post-vill. of Jefferson co.

Wor'thy, (*wur'thy,*) *a.* [Ger. *würdig;* Ln. *waardig.*] Possessing worth or excellence of qualities; noble; illustrious; virtuous; estimable; deserving; being such as merits; having worth or excellence.—Equivalent to; suitable; having qualities suited to (either in a good or bad sense); equal in value; suitable to anything bad; deserving of ill.

The Nine Worthies of the World are, Joshua, Gideon, Samson, David, Judas Maccabæus, Alexander the Great, Julius Cæsar, Charlemagne, and Godfrey of Bouillon. Authorities are not agreed respecting the last-mentioned. Richard or Robert Burton (an assumed name for Nath. Crouch), in his *History of the Nine Worthies,* published in 1687, gives three Gentiles, viz., Hector, Alexander the Great, and Julius Cæsar; three Jews, viz., Joshua, David, and Judas Maccabæus; and three Christians, viz., Arthur, Charlemagne, and Godfrey of Bouillon. Shakspeare (Love's Labors Lost, act v. sc. 2) introduces only five in the pageant of the Nine Worthies, viz. Pompey, Alexander, Judas Maccabæus, Hercules, and Hector.

—*n.* A man of eminent worth; a man distinguished for useful and estimable qualities; a man of valor.—Used frequently in the plural.

Wotton-under-Edge, a town of England, in Gloucestershire, 16 m. from Gloucester. *Pop.* 2,734.

Would, (*wood,*) *a.* The past tense of WILL, *q. v.*

Would'-be, *a.* Professing to be; desirous of becoming. (Colleq.)

Wound, (*woond,*) *n.* [A.S. *wund;* Lat. *vulnus, vulneris.*] A cut; a stab; a laceration; a breach of the skin and flesh of an animal, or of the bark and wood of a tree, or of the bark and substance of other plants, caused by violence or external force; injury; hurt.—Injury; detriment; damage; as, a *wound* given to one's reputation.

(*Surg.*) A solution of the continuity of a soft part of the body, effected by some external agent, and attended with a greater or less amount of bleeding. Wounds are of various kinds, and are generally distinguished as Incised, lacerated, contused, and punctured. An *incised W.* is a simple division of the fibres made by a sharp cutting instrument. A *lacerated W.* is one in which the fibres, in place of being cleanly divided by a sharp instrument, are torn asunder by violence, the edges of the wound being in this case jagged and uneven. A *contused W.* is one made by a violent blow by some blunt instrument, the part being bruised as well as torn. A *punctured W.* is one made with a narrow pointed instrument, as a sword or bayonet. *W.* are dangerous, according to the extent of soft parts which they involve, the parts they occur in, and the state of health of the individual. In incised *W.* the first thing to be attended to is to stop the hemorrhage. This is usually accomplished by simply bringing the edges of the *W.* together; but if any of the larger blood-vessels have been injured, pressing the trunk, by means of a bandage or tourniquet, will be necessary; and should this not succeed, the vessels must be secured with ligatures. Next, care should be taken that all extraneous substances are removed from the *W.* Then the edges of the *W.* are to be brought together, and retained either by straps of adhesive plaster, or in some situations by one or two stitches. Generally such *W.* heal very quickly, without any suppuration taking place, or, as it is said, "by the first intention." When, however, this is not the case, and suppuration comes on, all attempts to procure union by the first intention should be abandoned, the plasters and bandages removed, poultices and warm dressings had recourse to to remove inflammation, and afterwards healing ointments applied. Lacerated and contused *W.* require to be similarly treated; but they heal less kindly, and suppuration almost always takes place. The swelling and inflammatory symptoms which commonly attend contused *W.* are to be diminished by cooling lotions or emollient poultices. Punctured *W.* are dangerous from their depth, and the internal effusion of serum and blood which usually attends them. They are frequently also followed by severe inflammation and suppuration, although this may be prevented by using antiseptics. Sometimes it may be necessary to enlarge the *W.* a little, so as to remove the stretching of the parts; and to lessen the inflammation, leeches and fomentations are often required. See GUNSHOT WOUNDS.

(*Law.*) In medical jurisprudence, the word *W.* is applied to any lesion of the body, referring not only to a solution of continuity, as in the common sense of the word, but also to every other kind of accident, such as bruises, contusions, fractures, dislocations, and the like.

—*v. a.* To bruise; to hurt by violence; to cut, slash, or lacerate.

Wound', *imp.* and *pp.* from WIND, *q. v.*

Wound'er, *n.* A person who, or that which wounds.

Wound'less, *a.* Free from wound or injury; invulnerable.

Wound'wort, *n.* (*Bot.*) A plant of the genus *Stachys* or BETONICA, *q. v.* It is about a foot high and rather slender. Stem erect, square, generally hispid backward on the angles, sometimes nearly smooth. Leaves smooth, membranaceous, generally rounded at

base and acute at apex. Spike terminal, leafy, composed of verticels, each with 4–8 pale purple flowers. Variable in pubescence. It is found in fields and roadsides.

Wound'y, *adv.* Extremely. (Low.)

Wou'rali, Wou'rara, Woo'rari, *n.* An arrow-poison prepared by the S. Amer. Indians. See STRYCHNOS.

Wou'vermans, PHILIP, an eminent Dutch painter, b. at Haarlem, 1620, excelled in depicting roadside, hunting, and marauding scenes. D. 1668. His brothers, *Peter* and *John*, were both distinguished painters.

Wou'-wou, *n.* (*Zoöl.*) The native name of the Silvery Gibbon (*Hylobates leuciscus*), a pretty monkey found in the Malay peninsula.

Wove, *imp.*, and WOVEN, *pp.*, from WEAVE, *q. v.*

Wrack, (*rak,*) *n.* [Fr. *varec.*] (*Bot.*) See ZOSTERACEÆ.

Wraith, (*rath,*) *n.* [A. S. *orath*, breath.] A spirit supposed to preside over the waters. — A supposed apparition of a person either before or after his death. (Scot.)

Wran'gel, KARL GUSTAF VON, a grand-marshal of Sweden, b. 1613, distinguished himself as a naval and military commander. He defeated the Danish fleet in 1644, the imperial army near Augsburg in 1648, and D. 1676.

Wrangle, (*rang'gl,*) *v. n.* To dispute angrily; to quarrel peevishly and noisily; to brawl; to altercate.

—*v. a.* To involve in a quarrel or dispute; to embroil.

—*n.* An angry dispute; a noisy quarrel.

Wran'gler, *n.* An angry disputant; one who disputes with heat or peevishness.

(*Cambridge University, Eng.*) One who attains the highest honors in the public mathematical examinations for the degree of bachelor of arts is so called. At the close of the last day of examination, those who have most distinguished themselves (to the number of thirty at least) are arranged in order of merit by the examiners, and divided into three classes: wranglers, senior optimes, and junior optimes. The first or senior wrangler is the most distinguished mathematician of his year.

Wrap, (*rap,*) *v. a.* To wind or fold together. — To cover by winding something round: to involve. — To hide; to comprise; to contain; to involve totally; to inclose. — To transport; to snatch up.

To be wrapped up in, to be completely engrossed in.

—*n.* A wrapper — generally used in the plural for shawls, furs, &c.

Wrappage, (*rap'pej,*) *n.* The act of wrapping. — That in which anything is wrapped.

Wrap'per, *n.* One who, or that which wraps. — That in which anything is wrapped or inclosed; an envelope. — A loose upper garment.

Wrap'rascal, *n.* A great-coat; a cant term for a coarse upper coat.

Wrasse, (*ras,*) *n.* (*Zoöl.*) See LABRUS.

Wrath, (*rath,*) *n.* [A. S. *wrath*, *wræth.*] Violent anger; vehement exasperation; indignation; fury; rage; choler; ire; resentment. — The effects of anger; the just punishment of an offence or crime.

Wrath'ful, *a.* Full of wrath; very angry; greatly incensed; furious. — Springing from wrath, or expressing it.

Wrath'fully, *adv.* In a wrathful manner; with violent anger.

Wrath'fulness, *n.* The state or quality of being wrathful.

Wrath'ily, *adv.* In a wrathful manner.

Wrath'less, *a.* Free from anger.

Wrath'y, *a.* Very angry. (Colloq.)

Wreak, (*reek,*) *v. a.* [A. S. *wrecan.*] To execute justice upon; to inflict punishment or vengeance upon.

Wreath, (*reeth,*) *n.*; *pl.* WREATHS. [A. S. *wræth.*] A garland; a chaplet; an ornamental twisted bandage. — Anything twisted or curled; as, a *wreath* of smoke.

Wreathe, (*reeth,*) *v. a.* To twist; to convolve; to wind one about another; to interweave; to intertwine. — To encircle, as a garland. — To encircle, as with a garland.

—*v. n.* To be interwoven or entwined.

Wreath'less, *a.* Destitute of a wreath.

Wreath'y, *a.* Twisted; curled; spiral.

Wreck, (*rek,*) *n.* (Written also *wrack.*) [Du. *wrak*, broken; A. S. *brecan*; Lat. *frango*; Gr. *regnumi.*] Destruction; ruin; dissolution by violence.

—A vessel broken on the rocks; a ship dashed against rocks or land and broken, or otherwise rendered useless by violence and fracture.

—Any ship or goods driven ashore or found floating at sea in a deserted or unmanageable condition. — The remains of anything ruined.

(*Maritime Law.*) The name given to such goods as after a shipwreck are cast upon the land by the sea, and left there within some country so as not to belong to the jurisdiction of the admiralty, but to the common law. Wrecks, by the common law, belong to the king or his grantee, but if claimed by the true owner within a year and a day, the goods, or their proceeds, must be restored to him. In this country, the several States bordering on the sea have enacted laws generally similar to the English law. Ships or goods found derelict or abandoned at sea, and called *Floatsam*, belong to the United States, if unclaimed by the true owner within a year and a day.

(*Metall.*) A vessel in which ores are washed for the third time.

—*v. a.* To break on the rocks; to strand; to drive against the shore, or dash against the rocks, and break or destroy; to ruin.

—*v. n.* To suffer wreck or ruin.

Wreck'age, *n.* The act of wrecking. — The ruins or remains of a ship or cargo that has been wrecked.

Wreck'er, *n.* One who plunders the wrecks of ships, or collects goods cast on the shore from wrecks. — A vessel used to save life and property from a wrecked vessel.

Wreck'-master, *n.* A person appointed by lawful authority to take charge of goods, &c., cast on shore from a wreck, in the interest of the owners.

Wren, (*ren,*) *n.* [A. S. *wrenna.*] (*Zoöl.*) The common name of the active little insessorial birds comprising the genus *Troglodytes*, family *Liotrichidæ*. This genus is distinguished by having the bill nearly as long as the head, compressed, decurved; and the wings about equal to the tail. There are several species, among which the best known is the House-wren, *T. ædon*, found in the eastern U. States to Missouri. It is nearly five inches long, the wings over two inches; the color above reddish brown, barred with dusky, under parts brownish-gray. This *W.*

Fig. 2629. —HOUSE-WREN, (*T. ædon.*)

delights in being near the habitations of man, and builds its nest in any hole it finds in the timbers or walls of our buildings, or in a hollow tree of the orchard or garden. The nest is formed of dry twigs and grasses, and lined with soft materials; eggs five or six, pale-reddish. — The Ruby-crowned Wren, and the Golden-crested Wren belong to the family *Tardidæ*, genus *Regulus*, q. v.

Wren, SIR CHRISTOPHER, an English architect, b. at East Knoyle, Wiltshire, 1632. In 1608 he became surveyor-general of the king's works, and, in 1680, was chosen president of the Royal Society. D. 1723. His great work is St. Paul's Cathedral. See PAUL'S, (ST.)

Wrench, (*rench,*) *v. a.* [A. S. *wringan.*] To pull with a strain; to wring, wrest, or twist by violence. — To strain; to sprain; to distort.

—*n.* A violent twist, or a pull with twisting. — A sprain; an injury by twisting, as in a joint. — An instrument for screwing or unscrewing iron-work.

Wrench'-hammer, *n.* A wrench so formed that one end may be used as a hammer.

Wren'tham, in *Massachusetts*, a post-township of Norfolk co., 23 m. S.S.W. of Boston.

Wrest, (*rest,*) *v.a.* [A.S. *wræstan, gewræstan.*] To twist or extort by violence; to pull or force from by violent wringing or twisting; to take or force by violence. — To distort; to turn from truth or twist from its natural meaning by violence; to pervert.

—*n.* Distortion; violent pulling and twisting; perversion — An instrument to tune with. — A partition which determines the form of a bucket in an overshot wheel.

Wrest'er, *n.* One who wrests or perverts.

Wrestle, (*rès'l,*) *v. n.* [A.S. *wræstlian*; Du. *worstelen.*] To contend by grappling and trying to throw down; to strive with arms extended. — To struggle; to strive; to contend.

—*v. a.* To wrestle with.

—*n.* A struggle between two persons who try to throw each other down.

Wres'tler, *n.* One who wrestles; one who is skilled in wrestling.

Wretch, (*retch,*) *n.* [A. S. *wræcca.*] An outcast; an exile; a miserable person; one sunk in the deepest distress. — A worthless mortal; a person sunk in vice. — It is sometimes used by way of slight or ironical pity or contempt, and also used to express tenderness.

Wretch'ed, *a.* Very miserable; sunk into deep affliction or distress, either from want, anxiety, or grief; calamitous; very afflicting. — Worthless; paltry; very poor or mean; despicable.

Wretch'edly, *adv.* In a wretched manner; most miserably; very poorly; meanly; despicably; pitifully.

Wretch'edness, *n.* The state of being wretched; extreme misery or unhappiness, either from want or sorrow. — Meanness; despicableness; pitifulness.

Wrex'ham, a town of England, in N. Wales, co. of Denbigh, 11 m. from Chester. It is a great mart for flannel, and in the vicinity are several iron manufactories. *Pop.* 7,500.

Wriezen, or **Wrietzen,** (*reet'zen,*) a town of Prussia, on the Oder, 37 m. from Berlin. *Manuf.* Woollens, tobacco, leather, &c. *Pop.* 7,182.

Wriggle, (*rig'gl,*) *v. n.* [Du. *wrikken, wriggelen.*] To move the body to and fro with short turns or motions.

—*v. a.* To put into a quick, reciprocating motion; to introduce by a shifting motion.

Wright, FANNY. See OWEN.

Wright, (*rīt,*) *n.* [A.S. *wyrhta*, from *wyrcen*; Du. *wirken*, to work.] An artificer; one whose occupation is some kind of mechanical business; a manufacturer. This word is now chiefly used in compounds, as in wheel-*wright*, ship*wright*, &c.

Wright, in *Indiana*, a post-township of Greene county.

Wright, in *Iowa*, a N. co.; *area*, 576 sq. miles. *Rivers.* Iowa and Boone. *Surface*, undulating; *soil*, fertile. *Cap.* Clarion. *Pop.* (1895) 16,024.

Wright, in *Michigan*, a township of Hillsdale co. — A post-township of Ottawa co.

Wright, in *Minnesota*, a central co.; *area*, 684 sq. m. *Rivers.* Mississippi and Crow. There are also a number of small and beautiful lakes. *Surface*, undulating; *soil*, fertile. *Cap.* Buffalo. *Pop.* (1895) 27,653.

Wright, in *Missouri*, a S. co.; *area*, 700 sq. m. *Rivers.* Gasconade, the Osage Fork of the same, and James, Bryant's, Finley, and North Forks of White river. *Surface*, diversified; *soil*, moderately fertile. *Min.* Lead, copper, and iron. *Cap.* Hartville. *Pop.* (1897) 15,600.

Wright, in *South Carolina*, a township of Darlington county.

Wrigh'tia, *n.* (*Bot.*) A genus of plants, order *Apocynaceæ*, consisting of shrubs, or small aërial rooting trees, confined to the eastern hemisphere, ranging from Silhet and Nepaul to Western Australia. An inferior kind of Indigo is prepared from the leaves of *W. tinctoria* in some parts of Southern India, and called Pala Indigo, from Pala or Palay, the Tamil name for this and some allied milky trees. The wood of the Palay is beautifully white, close-grained and ivory-like, and is commonly used in India for making toys. It is well suited for turning, carving, and inlaying, and has been tried for engraving as a substitute for boxwood, but found unsuitable. The wood of *W. antidysenterica* has also been made the subject of a similar experiment without success. It is very hard in the centre, and is used in India for posts and rice-beaters. The bark is the Coussi-bark of the *Materia Medica*, and is valued as a tonic and febrifuge, and as a remedy for dysentery. The oat-like seeds also are reputed to possess valuable medicinal properties.

Wright's Corners, in *New York*, a post-village of Niagara co., 60 m. W. of Rochester.

Wright's Ferry, in *Wisconsin*, a post-village of Crawford co., abt. 10 m. E. of Prairie du Chien.

Wrights'town, in *New Jersey*, a post-village of Burlington co., 20 m. S.S.E. of Trenton.

Wrightstown, in *Pennsylvania*, a post-township of Bucks co., 9 m. S.E. of Doylestown.

Wrightstown, in *Wisconsin*, a post-twp. of Brown co.

Wrights'ville, in *New Jersey*, a village of Monmouth co., 5 m. from Allentown.

Wrightsville, in *New York*, a township of Schoharie co., 24 m. W. of Albany.

Wrightsville, in *Pennsylvania*, a village of Warren co., 225 m. N.W. of Harrisburg. — A post-borough of York co., 11 m. E.N.E. of York.

Wring, (*ring,*) *v.a.* [A.S. *wringan*; O. Ger. *ringan*, to squeeze out.] To twist; to turn and strain with violence. — To squeeze; to press; to force by twisting. — To writhe; to distress; to press with pain. — To distort; to pervert. — To persecute with extortion.

(*Naut.*) To bend or strain out of its position.

—*v. n.* To writhe; to twist as in anguish.

Wring'-bolt, *n.* (*Ship-building.*) A bolt for securing the planks against the timbers until they are properly fastened by bolts, spikes, and treenails.

Wring'er, *n.* One who, or that which, wrings; an extortioner. — An instrument for wringing or forcing water out of clothes after they have been washed.

Wring'ing-wet, *a.* So wet as to require wringing.

Wring'-stave, *n.* (*Ship-building.*) Strong pieces of wood used with the wring-bolts.

Wrinkle, (*rin'kl,*) *n.* [A.S. *wrincle, wrinclian.*] A small ridge or prominence, or a furrow, formed by the shrinking or contraction of any smooth substance; corrugation; a crease, as on the face; a fold or rumple in cloth. — Roughness; unevenness.

—*v. a.* To contract into furrows and prominences; to corrugate. — To make rough or uneven.

—*v. n.* To shrink into furrows, or wrinkles and ridges.

Wrink'ly, *adv.* Somewhat wrinkled; having a tendency to be wrinkled.

Wrist, (*rist,*) *n.* [A.S. *wrist.*] (*Anat.*) The part or joint between the forearm and the hand; the CARPUS, *q.v.*

Wrist-drop, *n.* (*Med.*) A disease to which compositors are liable, caused by using new type, which cuts the skin of the thumb and fingers. Lead-poison enters at the abraded places, and paralysis of the wrist is the result. It may be cured by soaking the hand in a solution of potassium.

Bridle wrist, the wrist of the left hand, in which a horseman holds the bridle.

Wrist'band, *n.* That hand or part of a shirt-sleeve which covers the wrist.

Wrist'let, *n.* An elastic band which confines the upper part of a glove at the wrist.

Writ, (*rit,*) *n.* That which is written; particularly applied to the scriptures, or books of the Old and New Testament.

"Of ancient *writs* unlocks the learned store." — *Pope.*

(*Law.*) A mandatory precept, issued by the authority and in the name of the sovereign or the state, for the purpose of compelling the defendant to do something therein mentioned. It is issued by a court or other competent jurisdiction, and is returnable to the same. It is to be under seal, and attested by the proper officer, and is directed by the sheriff, or other officer legally authorized to execute the same. — *Writ of error*, a writ issued out of a court of competent jurisdiction, directed to the judges of a court of record in which final judgment has been given, and commanding them, in some cases, themselves to examine the record; in others, to send it to another court of appellate jurisdiction, therein named, to be examined, in order that some alleged error in the proceedings may be corrected.

Writative, (*rī'tā-tiv,*) *a.* Disposed to write; — opposed to *talkative*. (Low.)

Write, (*rīte,*) *v. a.* (*imp.* WROTE; *pp.* WRITTEN.) [A. S. *writan*; Goth. *writs*, a point, a line.] To form by a pen on paper or other material, or by a graver on wood or stone. — To express by forming letters and words on paper or stone. — To impress durably. — To compose or produce, as an author. — To copy; to transcribe. — To communicate by letter.

To write to, to communicate with by written documents. — *To write one's self*, to style or call one's self; as, "who begun to *write themselves* men" — To bring into a certain condition by writing; as, "There is not a more melancholy object in the learned world, than a man who has *written himself* down." (*Addison.*)

—*v. n.* To perform the act of forming characters, letters, or figures, as representatives of sounds or ideas. — To be

employed as a clerk or amanuensis.—To play the author; to recite or relate in books.—To call one's self; to be entitled to use the style of.—To compose; to frame or combine ideas and express them in words.

Writ'er, *n.* One who writes or has written; an author. —A clerk or amanuensis; a scribe; a penman.

Writers to the Signet, a society of lawyers in Scotland, equivalent to the highest class of attorneys in England.

Writ'ership, *n.* The office or the state of a writer.

Writhe, (*rith,*) *v. a.* [A. S. *writhan;* Dan. *vrider.*] To distort; to twist with violence.—To wrest; to force by violence.

—*v. n.* To twist or twine one's self; to twist and turn; to be distorted, as from agony.

Writ'ing, *n.* The act or art of forming letters and characters on paper, wood, stone, &c., for the purpose of recording the ideas which the characters and words express, or of communicating them to others by visible signs.—Anything written or expressed in letters; a book; a manuscript; any written composition; a pamphlet; an inscription.

(*Hist.*) That the art of writing began in the conveying of information by pictures, and the gradual reduction of these pictures into hieroglyphic symbols, is the theory now generally entertained. A modification of the hieroglyphic method led to the very ancient cuneiform writing of Babylonia, while in Egypt the hieroglyphics gradually became simplified into the more rapid hieratic and demotic methods of writing. The Egyptian characters, at first word-signs only, became in part syllabic, and subsequently alphabetic; and it is held to be not improbable that the Phœnicians, who traded with Egypt, when forming a written language for themselves adopted the alphabetic Egyptian signs as the basis of their writing, subsequently transmitting them to other nations. The Greeks and Romans believed Phœnicians were the inventors of letters, the knowledge of it being brought by Cadmus from Phœnicia into Greece, about 1500 B.C. From the Phœnician, therefore, are probably derived:—1. The Oriental alphabets used in Asia W. of the Indus, written, like Hebrew, from right to left; the principal being the Syriac, Arabic, and Persian. 2. The Pelasgic, or original Greek alphabet, originally written, like the Phœnician and other Eastern languages, from right to left. It was afterwards written consecutively from right to left, and from left to right, in the manner that land is ploughed. This procured for it the name of *βουστρόφηδον*, or furrowed writing. This species of writing maintained its ground for a lengthened period. The laws of Solon, promulgated about 694 B. C., were written in it; and it was used till the 5th cent. B.C. But writing from left to right was introduced for a considerable period before the alternate or furrowed method was abandoned. Inscriptions dated 742 B. C. have been found written from left to right, or in the way now practised. From the Pelasgic alphabet were derived the Etruscan and Oscan. From the Ionic, a later variety of the Greek, came the Arcadian, the Coptic, the Ethiopic, the Mœso-Gothic, and Runic, and in comparatively modern times, the Armenian, Illyrian, Sclavonic, Bulgarian, and Russian. With regard to Greek writing, it is to be observed that the most ancient mode was in capitals. The small letters now in use seem to have been introduced gradually; for in our oldest Greek MSS., even so early as the 5th century, they appear intermixed with capitals. But the latter were principally employed until the 7th or 8th century. 3. The Latin alphabet is also derived from the Ionic-Greek. In the earliest inscriptions which we possess, the forms of the letters scarcely differ from those in use at the present day; but great varieties have been in subsequent times introduced: first, in the ordinary method of writing it; as, the Uncial, Semi-Uncial, Lombard, Italic, &c. Secondly, in the number and form of the letters contained in the numerous alphabets derived from it. 4. A fourth class of alphabetical languages consists of the Sanskrit and its derivatives. These are very numerous, and are spoken in the continent and islands of India. The antiquity of the Sanskrit alphabet is undoubtedly great; but those who assign to it a separate origin are probably in error. Indeed, the great regularity of the Devanagaree, or most elegant form of the Sanskrit alphabet, and its copiousness (it contains 100 letters) seem to afford strong presumption that it was compiled by some learned individual or body (like the Russian and other modern Western alphabets), from other forms of writing then in use, and imported into India from the West. The Sanskrit and its derivative languages are written, like European, from left to right. These four classes comprehend all the alphabetical languages in existence. The following table exhibits the number of letters in some of the principal: See *Origin and Development of Letters.* Taylor.

Class 1. Hebrew, Samaritan, Syrian, and Chaldean, 22 each. Phœnician (known) 17. Arabic, 28. Persian, 32.

Class 2. Greek, 24. Armenian, 38. Ethiopic or Abyssinian, 202. Modern Russian, 41.

Class 3, (which is only a subdivision of Class 2.) Latin, 22. English, 26. French, 28. Italian, 20. German, 26.

Class 4. Sanskrit (Devanagaree), 100.

Writing obligatory. (*Law.*) A bond; an agreement reduced to writing, by which the party becomes bound to perform something, or suffer it to be done.

Writ'ing-book, *n.* A book for the practice of penmanship.

Writ'ing-desk, *n.* A desk or table used for writing on.

Writ'ing-master, *n.* One who instructs in penmanship.

Writ'ing-paper, *n.* Paper suitable for writing upon.

Writ'ing-school, *n.* A school in which penmanship is taught.

Writ'ing-table, *n.* A table used for writing upon.

Wrong, (*rong,*) *a.* [A. S. *wrang,* from *wringan.*] Not suitable; not morally right; twisted or turned out of the right line of conduct; that deviates from the line of rectitude prescribed by God; not just or equitable; not right or proper; not legal.—Not according to the truth; erroneous.—Not physically right; not according to rule; incorrect.

—*n.* That which is wrong or twisted from the right line; whatever deviates from moral rectitude; any injury done to another; a trespass; a violation of right.

—*adv.* In a wrong manner; not rightly; amiss; morally ill; erroneously.

—*v. a.* To do a wrong to; to injure; to treat with injustice; to deprive of some right, or to withhold some act of justice from.—To do injustice by imputation; to impute evil unjustly.

Wrong'doer, *n.* One who does wrong, or performs some evil action.

(*Law.*) One who commits an injury; a *tort-feasor.*

Wrong'-doing, *n.* An evil or wicked act.

Wrong'er, *n.* One who wrongs another.

Wrong'ful, *a.* Injurious; unjust; unfair.

Wrong'fully, *adv.* In a wrongful manner; unjustly; in a manner contrary to the moral law or justice.

Wrong'head, *n.* A person of a perverse mind.

—*a.* Wrongheaded.

Wrong'headed, *a.* Perverse in understanding; obstinately wrong in opinion; stubborn; perverse.

Wrong'headedness, *n.* The state of being wrongheaded.

Wrong'ly, *adv.* In a wrong manner; unjustly; amiss.

Wrong'ness, *n.* The state or quality of being wrong.

Wrong'-timed, *a.* Ill-timed.

Wrote, (*rōt,*) *imp.* from Write, *q. v.*

Wroth, (*rawth,*) *a.* [A. S. *wruth, wrath.*] Very angry; much exasperated.

Wrought, (*rawt,*) *imp.* and *pp.* from Work, *q. v.*

Wrought-iron. See Iron.

Wrung, (*rŭng,*) *imp.* and *pp.* from Wring, *q. v.*

Wry, (*rī,*) *a.* [Dan. *vraa;* Sw. *vra.*] Twisted; turned to one side; distorted.—Deviating from the right direction.—Wrested; perverted. (R.)

Wry face, a distorted countenance; a grimace.

Wry'neck, (*rī'nek.*) *n.* A twisted or distorted neck.

(*Zoöl.*) A small bird of the Woodpecker family (*Yunx torquilla*), found in various parts of Europe (Fig. 2630). Its principal colors consist of different shades of brown. The bill is rather long, sharp pointed, and pale gray; the eyes light brown; but what chiefly distinguishes this bird is the structure of its tongue, which is of considerable length, of a cylindrical form, and capable of being pushed forward and drawn into its bill again. Legs short and slender; toes long, two before and two behind; the claws sharp, much hooked, and formed for climbing branches of trees, on which it can run with the utmost facility.

Fig. 2630.—WRYNECK, (*Yunx torquilla.*)

(*Med.*) The *torticollis*, a variety of rheumatism, seated in the muscles of the neck, which prevents the motion of the head, and causes the patient to hold it inclined to the side affected. It is commonly of short duration; usually disappearing in a few days. Rubefacients are the best topical applications. The term is also applied to permanent contractions of the muscles of the neck, which causes the neck to be held to one side. The remedy is the division of the contracted muscles.

Wry'necked, *a.* Having a distorted neck.

Wudwan, (*wood-wan',*) a town of India, in Guzerat; Lat. 22° 39′ N., Lon. 71° 38′ E.; *pop.* 35,000.

Würtemberg, a kingdom of the German empire, bounded on the W., S.W., and N.W. by the grand-duchy of Baden; E., S.E., and N.E. by Bavaria; and S. by the lake of Constance and Vorarlberg; Lon. bet. 8° 15′ and 10° 30′ E., Lat. between 47° 35′ and 49° 35′ N.; *area,* 7,532 sq. m. It is divided into the 4 circles of the Neckar, Black Forest, Jaxt, and Danube. Its cap. is Stuttgart. The surface of *W.* is composed of hill and dale. In the Black Forest Circle the mountains attain the highest elevation, Balersbronn being 3,781; Schwarzkopf, 3,584; Gaiskopf, 3,455; and Lemberg 3,313 feet above the sea. Rich pastures, cultivated fields, orchards, gardens, hills covered with vines, and mountains with forests, give the most diversified scenery. The most important rivers are, the Neckar, the Danube, and the Main. The prevailing rocks are granite, gneiss, limestone, and various sandstones. Tourmaline, cobalt, bismuth, silver, malachite, chalcedony, gypsum, copper, rock-crystal, and iron occur. The pent-lands are extensive, and yield annually 450,000 florins. There are many springs of mineral waters, those of Cannstatt and Stuttgart being much frequented. The climate is mild and healthy, but in the highlands the winters are long and cold. Wheat, oats, barley, rye, potatoes, beans, maize, turnips, mangold-wurzel, lucerne, &c., are the principal agricultural products. The manufactures are chiefly linen, woollen, cotton, and silk fabrics. Wool- and cotton-spinning, bleaching, dyeing, printing, iron-founding, making machinery, cutlery, gold and silver articles, glass, porcelain, earthenware, tile, cabinet-work, sawing wood, carriage-building, grinding corn, book-printing, and the cognate trades, are principal industries. In *W.*, more than 215,000,000 bottles of beer, or 125 by each person, are consumed yearly, besides wine, brandy, and liquors. Several dialects of German are spoken, of which the Swabian and Franconian are the most general. The population is divided into Evangelical Lutherans, 1,320,295 (68 6-10 per cent.), Catholics, 614,177 (30 6-10), other Christians, 16,064, Jews, 20,699. Every child between 7 and 14 years must attend school. There are 4 Protestant theological seminaries. The university of Tübingen has 41 ordinary professors, 9 extraordinary, and 19 tutors. Its students average 650, of whom 150 are foreigners.—*W.* was overrun in the 4th century by the Alemanni, who occupied that part afterwards called Swabia, and were conquered by the Franks under Clovis I. in 496. Eberhard V., called the Bearded and the Pious, was created duke by the Emperor Maximilian I., July 21, 1494. It underwent various vicissitudes during the Thirty Years' war, and the peace of Westphalia restored the reigning family, Oct. 24, 1648. It was entered by the armies of France, Feb. 9, 1803. It was raised to an electorate by the German diet in 1801, and the elector assumed the title of king, Jan. 1, 1803. National assemblies, convoked to revise the constitution of Sept. 25, 1819, were dissolved, without effecting their object, in 1849 and 1850. A treaty was concluded with Prussia, Aug. 13, 1866. In 1870 *W.* joined Prussia in the war against France, and in 1871 it became an integral part of the new German empire.

Wurtemberg, in *Pennsylvania,* a post-village of Lawrence co., abt. 13 m. S.E. of Newcastle.

Wurts'borough, in *New York,* a post-village of Sullivan co., 90 m. S.S.W. of Albany.

Würzburg, (*voorts'boorg,*) a city of Bavaria, in Lower Franconia, on the Main, by which it is divided into two parts, joined by an elegant bridge, 134 m. from Munich. It stands in a hollow. The Main is here a large and noble stream, presenting, with its boats and barges, an animated picture. On the left bank is a hill, with a

Fig. 2631.—ST. BURKHARDT'S CHURCH, WURZBURG.

castle, formerly the episcopal residence, now a citadel. The town itself is still surrounded with a mound and moat. Its university has a lib. of 250,000 vols., and there is a Jew's synagogue, a polytechnic institute, a school of music and several hospitals. *Manuf.* Woollens, leather, paper, surgical instruments, &c.

Wurzen, (*voort'zen,*) a walled town of Saxony, on the Mulde, 14 m. from Leipsic. *Manuf.* Linens and hosiery. *Pop.* 4,000.

Wyacon'da, in *Missouri,* a post-village of Scotland co., abt. 44 m. W.N.W. of Keokuk, Iowa.—A river which rises in Appanoose co., Iowa, and flowing S.E., enters the Mississippi at La Grange, in Lewis co.—A township of Clark co.

Wyalu'sing, in *Pennsylvania,* a creek which enters the N. branch of the Susquehanna from Bedford co.—A post-borough and township of Bradford co., 10 m. S.W. of Towanda.

Wyalusing, in *Wisconsin,* a post-village and township of Grant co., 100 m. W. of Madison.

Wyandot', or **Wyandott,** in *Kansas,* an E. co., bordering on Missouri; *area,* 160 sq. m. *Rivers.* Missouri and Kansas. *Surface,* undulating; *soil,* fertile. *Products.* Corn, wheat, oats, hay, vegetables, broom corn, all kinds of dairy products, live stock, &c. *Cap.* Kansas City. *Pop.* (1895) 57,352.

—A village, former cap. of the above co., on the Missouri river, 24 m. S.E. of Leavenworth.

Wyandot, in *Ohio,* a N.W. central co.; *area,* 404 sq. m. It is drained by the Sandusky river. *Surface,* undulating; *soil,* fertile. *Cap.* Upper Sandusky. *Pop.* (1897) 24,260.

—A post-village of the above co., 50 m. N. of Columbus.

Wyandots', a tribe of N. American Indians of the Iroquois family, the Hurons of the French writers, who called themselves Wendats or Yendats, first known at Montreal, where, in the middle of the 17th century, they became Roman Catholics under the instructions of the French missionaries. Having, as allies of other tribes, become involved in a war with the Iroquois, they were nearly exterminated, and the remnant emigrated to the country around Lake Superior; then gathered at Mackinaw, 1670, under the care of Father Marquette; thence came to Detroit, where they furnished 400 warriors to the English in 1812. In 1829 they were settled in the number of 600, on the head-waters of the Sandusky

river in Ohio; and in 1832, by a treaty with the U. S. government, removed to Kansas, where, in 1885, many of them acquired the rights of citizenship, each having of their divided lands a farm of 40 acres. A few of them removed to the Indian Territory.

Wyandotte', in *Cal.*, a post-township of Butte co. —In *Michigan*, a post-vill. of Wayne co., on Detroit river.

Wyandotte Cave, a remarkable cave in Crawford co., *Ind.*, 4 m. from Leavenworth; it is over 20 m. in extent, and is said to rival Mammoth Cave (*q. v.*) in its size and beauty.

Wych Hazel, *n.* (*Bot.*) See HAMAMELIDACEÆ.

Wycliffe, or **Wicklif,** JOHN DE, (*wik'lif,*) the earliest of the English reformers, called the Morning Star of Reformation, and B. in Yorkshire, 1324. He studied at Merton College, Oxford, where his greatest talents, in 1361, obtained him the mastership of Baliol College. In 1376 *W.* began to preach against and to denounce the corruptions of the church; such conduct led to his citation before a synod, ordered to examine him by Gregory XI. *W.* appeared, supported by John of Gaunt, duke of Lancaster, and Lord Henry Percy; *W.* made an able defence of himself, and the council ended without any determination. It would appear that, still continuing to denounce papal corruption, he was, in 1378, summoned before a synod held in the archbishop's palace at Lambeth; but his safety was secured by a message from the king's mother, ordering the proceedings to terminate. It is remarkable that, although *W.* continued his vehement attacks upon the temporal power of the Pope, and also upon several vital points of Roman Catholic doctrine, he escaped the fate of those who professed "heresy." This immunity from the consequences of his bold conduct is supposed to have been owing to the secret protection of John of Gaunt; nevertheless, forty years after his death, his bones were taken up and burned by order of the council of Constance. He wrote, among other works, a tract on the schism of the popes; and also translated the New Testament into English. D. 1384.

Wycombe, CHIPPING or HIGH, (*wik'kum,*) a town of England, in Buckinghamshire, 29 m. from London; *pop.* 4,221.

Wye, (*wī.*) a river of England, in South Wales, rising in the S. side of Plinlimmon, in Montgomeryshire, and, after a course of 130 m., falling into the Severn below Cheyston.

Wye River, in *Maryland*, an inlet of the Chesapeake Bay, between Talbot and Queen Anne cos.

Wyes, (*wīz,*) the supports of the telescope in the theodolite and in the levelling instrument; —so called from their resemblance to the letter Y, and written also *Y's.*

Wy'lliesburg, in *Virginia*, a post-village of Charlotte co., 18 m. S. of Marysville.

Wym, in *Maine*, a vill. of Kennebec co.

Wymondham, or WINDHAM, (*wind'ham,*) a town of England, in Norfolk co., 8 m. from Norwich. *Manuf.* Woven fabrics, spindles, tops, &c. *Pop.* 5,500.

Wy'nant's Kill, in *New York*, a stream which falls into the Hudson in Rensselaer co., 2 m. below Troy.—A post-village of Rensselaer co., 7 m. E.N.E. of Albany.

Wy'nantsville, in *New York*, a vill. of Rensselaer co.

Wyoce'na, in *Wis.* a.p.-v. and twp. of Columbia co.

Wyo'ming, a N.W. State of the American Union, lying mainly on the eastern slope of the Rocky Mountains, and in great part a mountainous region. It lies between Lat. 41° and 45° N., and Lon. 104° and 111° W., and is bounded on the E. by South Dakota and Nebraska, N. by Montana, S. by Colorado and Utah, and W. by Utah and Idaho, its length, E. to W., averaging 355 m., and breadth, N. to S., 276 m.—*Area*, 97,890 sq. m., or 62,649,600 acres. The State is traversed by the main axis or continental divide of the Rocky Mountains, which system finds here its greatest northern development, and is noted for the picturesqueness of its scenery and its wild and rugged character. The Wind River Mountains, in the west-central part of the State, constitute the culminating crest of the main range of the Rockies. Numerous other ranges traverse the State, including the Big Horn Mountains in the north-central section, the Laramie Range in the southeast, the Medicine Bow Mountains in the south, north of these the Sweetwater and Rattlesnake ranges, and in the west the Teton, Shoshone and Gros Ventre ranges. In the extreme northeast the Black Hills extend into the State from South Dakota. The greatest altitude of the Wind River Range is that of Fremont's Peak, 13,790 feet high. Other elevated peaks are the Grand Teton, 13,690, Mt. Hayden, 13,691, &c. The Wind River Mountains form the initial point of three widely separated drainage systems: those of the Columbia, flowing westward to the Pacific; the Colorado, southwestward to the Gulf of California, and the Missouri, southeastward to the Gulf of Mexico. Much the greater part of the State consists of elevated plains, it having a mean elevation of 6,000 feet.—*Rivers.* The S.E. part of *W.* is traversed by the North Fork of the Platte and its affluents, including the Laramie and Sweetwater rivers, the Ledge Pole, Rock, Poison Spring, Medicine Bow, Horse, and Rawhide creeks. The N.E. part is drained by the North and South Forks of the Cheyenne river, which flows eastward to the Missouri. The streams traversing the S.W. are Green river and its numerous affluents, whose waters reach the Pacific Ocean through the Colorado river and the Gulf of California. The N.W. is watered by the Big Horn and Yellowstone rivers, affluents of the Missouri, which flow north through S.E. Montana. The small streams W. of the Wind River Mountains combine to form the Snake River, which flows through Idaho to join the Columbia in Washington. None of these streams are navigable. They supply the mountains with an abundance of watercourses, but the plains and broad valleys are poorly supplied, many streams which run full in the mountains during the year drying out in summer on the plains. The Yellowstone Lake in Yellowstone National Park (*q. v.*) is the largest body of water in the State.—*Geol.* The surface strata of *W.* extend through much of the whole geological range, including rocks of the Eozoic, Devonian, Carboniferous, Triassic, Jurassic, Cretaceous, and Tertiary formations, while the evidences of recent volcanic action are shown in great sheets of lava and volcanic breccia, from which mountain ranges have been carved, and in the active hot springs and geysers of the Yellowstone Park. —*Min.* Of the numerous mineral products of *W.*, coal forms one of the most important. The Laramie Plains, an extensive plateau in the southern section of the State, embracing an area of 30,000 sq. m., are largely underlaid with lignite or brown coal of high order, containing 50 per cent. of carbon, its deposits ranging from a few inches to 15 feet in thickness and underlying an area of some 20,000 sq. m. Carbon, Evanston, Rock Springs, Almy and Twin Creek, on or near the Union Pacific R. R., are the most prolific mining regions, their deposits being extensively worked, and furnishing fuel for the railroads, towns and manufacturing industries of the State. The deficiency of fuel in many sections of the adjacent States makes these great deposits of the highest value, and has instigated a rapid increase in production, the yield having grown from 829,355 tons in 1886, to about 2,500,000 tons in 1896. Iron also exists abundantly in close juxtaposition to the coal-beds and in the mountains which surround the Laramie Plains. The other minerals include gold, silver, tin, copper, lead, bismuth, gypsum, graphite, sulphur, arsenic, alum, soda, petroleum, asbestos, and various building stones—granite, sandstone, marble and limestone. Gold and silver have been mined to some extent, though the yield as yet is small. Soda exists in several counties, the deposits near Laramie being 12 feet thick. Petroleum is found in many localities, and a number of wells have been bored in Fremont and Natrona counties.—*Natural productions.* *W.* contains about 22,000,000 acres of mountainous area, 18,000,000 acres of high plateaus, about 30,000,000 acres which produce nutritious grasses suitable for grazing, and 10,000,000 acres which can be utilized for agriculture, if irrigated. Like the mountain states of the west in general, *W.* has an arid climate, the rainfall in the arable regions being nowhere sufficient for agriculture. In this part of the State it ranges from 8 to 15 inches, diminishing westerly. More rain falls in the mountains, reaching there 30 or more inches annually. Timber, consisting chiefly of pine, spruce, and hemlock, exists abundantly on the mountains of every section of the State, with trees of other kinds on the foot-hills and in the valleys. The forests on the Black Hills in the E., on the Medicine Bow, Elk, and other ranges E. of the main divide, and those on the headwaters of Green river in the W. are hundreds of sq. m. in extent, and afford some of the finest timber of the country. During the high stages of water in the principal streams lumber may be rafted down to the Union Pacific R. R., and thus brought within easy reach of a market, it being of the highest advantage to those portions of the W. which are deficient in building material. The regions adapted to grazing are covered with highly nutritious grasses, native as well as introduced. These, on account of the dry climate, cure naturally, thus retaining their valuable qualities. There are hundreds of thousands of acres of fine pasture-lands, where cattle may feed throughout the year, and where they can be cheaply reared, the loss from exposure not being deemed sufficient to render provision for shelter and feeding necessary. The raising of cattle and sheep has therefore become the leading industry of the country, the State possessing over 1,500,000 cattle and 1,000,000 sheep.—*Agric.* The soil of the uplands and plateaus is a light sandy loam, that of the valleys a black loam, on which, by the aid of irrigation, large crops of alfalfa, clover, timothy, etc., may be grown. The cereal crops embrace wheat, corn, oats, barley, rye, and buckwheat, while potatoes yield largely, and are of excellent quality. Sugar beets are also grown. Agriculture is limited to the lands in the valleys and along the bases of the mountains, where flowing streams render irrigation possible. As yet the farming area is small, but it may be increased by a system of mountain reservoirs and irrigation canals. Of 1,830,432 acres in farms in 1890, only 476,831 were improved. A large proportion of the area of the State is still open for settlement, under the Homestead laws. —*Climate.* The summers are mild and delightful, the winters severe, in exposed regions, though the dryness of the air renders the cold endurable. Storms are infrequent, and the climate, as a rule, healthful and agreeable, the atmosphere being pure, rarefied, and usually cloudless. *Springs.* *W.* abounds in mineral springs, which are found widely throughout the State, including saline, chalybeate, sulphurous, and alkaline waters. Many of these are highly charged with elements of medicinal value, and some of them are noted for their curative properties. The mineral waters of Yellowstone Park are without a rival in the world for abundance. The *fauna* of the State includes the grizzly, black, and cinnamon bears, wolf, coyote, puma, wild-cat, wolverine, otter, beaver, porcupine, &c. The buffalo, once very abundant, is now practically extinct. There are many varieties of game and other birds, and of fishes.—*Pol. div.* *W.* is divided into 13 counties, as follows:

Albany.	Crook,	Laramie,	Sweetwater.
Big Horn,	Fremont,	Natrona,	Uinta.
Carbon,	Johnson,	Sheridan,	Weston.
Converse.			

The leading towns are Cheyenne (the capital), Larnmie, Rock Springs, Rawlins, and Evanston. The Shoshone Indian reservation includes 1,520,000 acres of excellent land, now occupied by Shoshone and Arapahoe Indians, some 2,000 in all.—*Govt.* The elective executive officials consist of a governor, secretary of state, auditor, treasurer and superintendent of public instruction. The legislative department of the government includes a Senate, whose members are elected for 4 years, and a House of Representatives, elected for 2 years. Sessions are held biennially, and are limited by the Constitution to 40 days. The judicial department embraces a supreme court, district courts, and justices of the peace. The right of citizens to vote and hold office cannot be abridged on account of sex, and men and women enjoy equally all civil and political privileges. *W.* was the first of American communities to give full suffrage to women, this being done in 1870, under the Territorial government, and subsequently included in the State constitution. The system seems to have worked to the satisfaction of the people, and full woman suffrage has since been adopted by several of the adjoining states.—*Educ.* In 1894, *W.* had 18,933 children of school age, of whom 10,310 were enrolled in the public schools, the teachers numbering 407. In addition there is a State University and agricultural college, at Laramie, a Congregational College, at Big Horn, and a number of private schools. The public institutions include an insane asylum at Evanston, a State hospital, at Rock Springs, a Soldiers' and Sailors' Home, at Cheyenne, and a State penitentiary, at Laramie.—*Hist.* The area of *W.* was in the main included in that of the Louisiana Purchase, of 1802, though the western section formed part of the Oregon settlement. In 1868, Congress set aside portions of the Territories of Dakota, Utah, and Idaho, as a separate Territory, to which the name of *W.* was given, from Wyoming Valley, in Pennsylvania. This Territory was admitted to the Union as a State, July 10, 1890. The oldest white settlement within its confines was Fort Laramie, on Platte river, which was made a fur trading post in 1834, rebuilt by the American Fur Co., in 1836, sold by them to the U. S. and garrisoned as a fort in 1849. It was long an important base of operations against the Indians, though it is now abandoned. Settlement took place very slowly until recently, the Indians occupying the more fertile districts. As the latter were removed, settlement became more rapid. There have been 2 serious Indian outbreaks, the Custer massacre by the Sioux, in 1876, and the Meeker massacre by the Utes, in 1878. The N.W. corner of the State, remarkable for its natural beauties and wonders, has been set aside as the Yellowstone National Park (*q. v.*). *Pop.* (1870) 9,118; (1880) 20,789; (1890) 60,705; (1900) 92,531.

Wyoming, in *New York*, a W. co.; *area*, 606 sq. m. *Surface*, undulating; *soil*, fertile. *Cap.* Warsaw. *Pop.* (1897) 32,645.

Wyoming, in *Pennsylvania*, a N.E. co.; *area*, 395 sq. m. *Surface*, mountainous; *soil*, moderately fertile. *Cap.* Tunkhannock. *Pop.* (1897) 16,840.

—A post-borough of Luzerne co., on the Susquehanna.

—A mountain of Luzerne co., extending from 15 to 20 m. along the Susquehanna, having an altitude of 1,000 feet.

Wyoming, in *West Virginia*, a S. co.; *area*, 700 sq. m. *Surface*, mountainous, and mostly covered with forest; *soil*, adapted to wool-growing. *Cap.* Oceana.

Wyoming Val'ley, in *Pennsylvania*, a valley in Luzerne co., Pa., famous as the scene of a massacre following a battle of Tory and Indian invaders, on one side, and the American settlers on the other, July 3, 1778. The American force was weak, nearly all the fighting men being away in the Continental Army, and more than half of it was killed. The survivors took refuge in Forty Fort, where most of the families of the Valley had gathered. The Tories, under Colonel Butler, offered unexpectedly easy terms of surrender, and the settlers went back to their homes, while the invaders were supposed to be leaving the Valley. Against the commands of their white leaders the Indians remained, and, on the night of July 4, began massacreing the inhabitants and burning the houses. All who could escape made their way into the Wilkes-Barre Mountains and the swampy land beyond, where so many women and children died that it was afterward called "The Shades of Death." When peace was established and the Indians came under control, the surviving settlers returned. They were confirmed in the possession of the valley about 1787.

Wy'sox, in *Illinois*, a township of Carroll co.

Wy'sox, in *Pennsylvania*, a post-village and township of Bradford co., about 3 m. E. of Towanda. *Pop.* (1897) 1,290.

Wythe (*with*), in *Illinois*, a township of Hancock co.

Wythe, in *Virginia*, a S.S.W. co.; *area*, 496 sq. m. *Rivers.* Holston and Little Kanawha, or New River, and Cripple, Reed and Walker's creeks. *Surface*, elevated; *soil*, fertile. *Min.* Iron, lead, stone-coal, limestone, and gypsum. *Cap.* Wytheville. *Pop.* (1897) 19,250.

Wythe'ville, in *Virginia*, a post-town, cap. of Wythe co., on the Norfolk & Western R.R., 133 m. W.S.W. of Lynchburg; has some manufactures. *Pop.* (1897) 2,900.

Wy'vern, *n.* (*Her.*) An imaginary animal representing a flying serpent.

W.—SECTION II.

Waddell', James Iredell, naval officer, was born at Pittsboro, N. C., July 13, 1824; entered the navy (1841); joined the Confederate navy (1862); served on different missions, and (Oct. 19, 1864) took command of the *Shenandoah*, and began a piratical warfare on American shipping on the high seas, capturing 38 ships. He returned to America a few years after the war, and was a captain in the service of the Pacific Mail Steamship Company. Died March 15, 1886.

Wade'na, in *Minnesota*, a N. W. central co.; *area*, 540 sq. m.; intersected by the Crow Wing river, and also drained by the Red Eye and Leaf rivers. *Surface*, rolling prairie with timber, both pine and hard wood; *soil*, fertile. *Cap.* Wadena. *Pop.* (1895) 6,076.

Wads'worth, James Samuel, soldier, was born at Geneseo, N. Y., Oct. 30, 1807; educated at both Yale and Harvard; studied law with Daniel Webster; enlisted in the Federal army (1861), and became a brigadier-general; engaged in the battles of Fredericksburg, Chancellorsville, and Gettysburg, and was assigned to the command of a division, under Gen. Grant. He was wounded at the battle of the Wilderness, May 6, and died May 8, 1864.

Wa'ges-fund, *n.* (*Polit. Econ.*) A term formerly in use to denote that portion of active capital employed in paying the wages of labor; not properly a "fund," but the aggregate of individual wages.

Wag'ner, Alexander, painter, was born at Pesth, Hungary, in 1838; was a pupil of Theodor von Piloty, at Munich. His pictures are mainly historical figures; one, the *Roman Chariot Race*, received a medal at the Centennial Exposition of 1876. He was appointed a professor at Munich about 1864.

Wagner, in *South Dakota*, a N.W. co.; *area*, 720 sq. m.; drained by Grand river. Grazing the leading industry. Unorganized. *Pop.* (1895) 55.

Wagonette', *n.* A kind of four-wheeled pleasure-wagon of light construction, without top, having seats lengthwise back, and one or two crosswise in front, holding six or eight persons.

Wahoo', *n.* [Am. Ind.] The burning-bush. (See Euonymus).—The winged elm (*Ulmus alata*), a small tree of the Southern and Western U. S., the hard and close-grained wood of which is used for the hubs of wagons, &c.

Wahoo, in *Nebraska*, a post-village, cap. of Saunders co., 54 m. W. of Omaha; has mills. *Pop.* (1897) 2,650.

Wah'peton, in *North Dakota*, a city, cap. of Richland co., 27 m. W. of Fergus Falls. Red River Valley University (Methodist) is located here. *Pop.* (1897) 1,950.

Waite, Morrison R., jurist, was born at Lyme, Conn., Nov. 29, 1816; graduated at Yale (1837); was admitted to the bar (1839); removed to Ohio, and became prominent in his profession and in politics; was a member of the legislature; in 1871 was sent to Geneva as U. S. Consul in the "Alabama" case; was president of the Constitutional Convention of Ohio (1873), and became Chief Justice of the U. S. Supreme Court in 1874. He received the degree of LL.D. from Yale College. Died March 23, 1888.

Wakash'an In'dians. (*Ethnol.*) A language-stock of North American Indians, often hitherto called *Nootkan*, which embraces the dialects of the Makahs, of Cape Flattery, Wash., and of many small tribes living along the west coast of Vancouver Island, B. C., divided into two sections, Aht tribes and Hæltzuk tribes. The total census gives about 5,400 persons speaking this tongue, which is a deep-throated, clicking guttural, almost unpronounceable by white men. J. G. Swan's history of the Makahs and Dr. Boas' account of the Kwakiuth Indians are the most comprehensive writings upon these maritime people and their customs.

Wake'field, in *Massachusetts*, a post-town of Middlesex co., 10 m. N. of Boston; has manufactures of rattan, pianos, and shoes. *Pop.* (1895) 8,304.

Wake'-rob'in, *n.* A plant (*Arum maculatum*). (See Arum.)—Also, any species of Trillium. See Trilliocæ.

Wal'dersee, Count von, soldier, was born at Potsdam, Germany, April 8, 1832; entered the army in 1850, and served with distinction thereafter, finally succeeding General Von Moltke as field-marshal of the German army in 1888. He was given command of the Ninth Army Corps in 1891. At the annual maneuvers of the German army near Stettin, in 1895, for his show of strategic ability he was complimented by the Emperor and promoted to the rank of field-marshal. Was commander-in-chief of the allied forces during the Boxer outbreak in China in 1900.

Walke, Henry, U.S.N., was born in Princess Anne co., Va., Dec. 24, 1808; entered the navy (1827); served during the Mexican war, and in the Mediterranean Squadron; in 1861 commanded the *Carondolet* at the battles of Fort Henry and Fort Donelson; captured the batteries below Island No. 10; led the Union fleet at the battle of Fort Pillow; was conspicuous at the battle of Memphis, and with the *Carondolet* overcame the Confederate ram *Arkansas;* was active in the Vicksburg and Red River operations; cruised for two years after the *Alabama* in the *Sacramento;* was commissioned commodore in 1866 and rear-admiral in 1870; retired in 1871, and died March 8, 1896.

Walk'er, Amasa, political economist, was born in Woodstock, Conn., May 4, 1799; was for many years engaged in commercial pursuits; from 1842 to 1848 he lectured on political economy at Oberlin, Ohio; in 1848 became a member of the Massachusetts Assembly, and in 1849 of the Senate; in 1851–52 was secretary of state, and in 1862–63 was a member of Congress. He was lecturer on political economy at Amherst College (1859–69). He was an active reformer, interested in the anti-slavery movement, and was one of the founders of the Free Soil party. In 1857 he began the publication of a series of articles on political economy, and was regarded as an authority on questions of finance. Died Oct. 29, 1875.

Walker, Francis Amasa, statistician and political economist, son of Amasa Walker, was born in Boston, Mass., July 2, 1840; graduated at Amherst (1860); served in the Civil War; was wounded at Chancellorsville; was for a time in Libby Prison; brevetted brigadier-general (1865). From 1865 to 1867 he taught Latin and Greek at Williston Seminary. In 1869 he was appointed chief of the Bureau of Statistics at Washington, and was superintendent of the ninth and tenth censuses (1870 and 1880), becoming an authority on statistical questions in the U. S. He was U. S. Indian Commissioner (1872); professor of Political Economy in the Sheffield Scientific School of Yale (1873–81); in 1881 he became President of the Massachusetts Institute of Technology in Boston. He was U. S. Commissioner to the International Monetary Conference in Paris in 1878; was elected in 1878 to the National Academy of Sciences, and was elected an honorary fellow of the Royal Statistical Society of London. Besides his census reports he published several volumes; among them: *The Indian Question* (1874); *The Wage Question* (1876); *Money* (1878); *Money, Trade and Industry* (1879); *Political Economy* (1883); *History of the Second Army Corps* (1886), and last, his masterly work on *Bimetallism*. Died Jan. 5, 1897.

Walker, John, lexicographer, was born near London, Eng., March 18, 1732. He is remembered as the author and compiler of the *Critical Pronouncing Dictionary*, published in 1791, which was, for more than half a century a popular authority, gradually superseded by Webster and others. Died Aug. 1, 1807.

Walker, John Grimes, U. S. N., was born in Hillsboro, N. H., March 20, 1835; graduated at the Naval Academy (1856); served, during the Civil War, on the Atlantic coast, the Gulf squadron, and the battles of the Mississippi river; was secretary of the lighthouse board (1873–78); chief of bureau of navigation (1881–89); acting rear-admiral commanding the South Atlantic station (1889–93); and rear-admiral and president of the naval retiring board in 1895.

Walker, Robert James, lawyer and statesman, was born in Northumberland, Pa., July 19, 1801; graduated at the University of Pennsylvania; removed to Natchez, Miss. (1826); in 1836 was elected to the U. S. Senate; secretary of the treasury (1845–49). In 1857 he was appointed governor of the territory of Kansas; in 1861 he was a staunch Federalist, and advocated the most vigorous policy toward the seceding States. In 1863 he was appointed financial agent of the U. S. in Europe, and negotiated $250,000,000 of the 5-20 U. S. bonds. Died Nov. 11, 1869.

Walk'erville, in *Montana*, a post-town of Silver Bow co. *Pop.* (1897) 2,150.

Wal'lace, Lewis, lawyer, soldier, and author, was born in Brookville, Ind., April 10, 1827; was a soldier in the Mexican war; practiced law in Covington and Crawfordsville, Ind. (1848–61); served with distinction in the Civil War, becoming a major-general of volunteers (1862), and rendering valuable service as a commander during 1863 and 1864. In 1881–85 he was U. S. minister to Turkey. Meanwhile, and since, he has practiced law and engaged in literary work. He published in 1873 his first novel, *The Fair God*, a story of the conquest of Mexico by the Spaniards; after seven years of study and preparation he issued his most popular book, *Ben Hur* (1880); then followed *Commodus, a Tragedy* (1889), and *The Prince of India* (1893). He also wrote *The Life of Benjamin Harrison*. Died Feb. 15, 1905.

Wal'lace, in *North Dakota*, a N.W. co.; *area*, 1,323 sq. m.; bounded N. and N.E. by Missouri river. *Soil*, generally fertile. Grazing is the leading industry. Unorganized. *Pop.* (1897) 100.

Wal'lack, James William, actor, was born at Lambeth, London, England, Aug. 24, 1795; was an actor from early childhood, and appeared in leading Shakespearean rôles in England and America; from 1837 was interested in theatrical management in New York city, finally establishing Wallack's Theater, in 1861. He was an actor of fine personality, thoroughly accomplished in stage technique. Died Dec. 25, 1864.

Wallack, John Lester, actor, son of James W. Wallack, was born in New York city, Jan. 1, 1820; appeared on the stage in 1847, and acted in various New York theaters until 1852, when he became a permanent member of his father's company. On the death of the latter (1864) he succeeded him as proprietor of Wallack's Theater, which he conducted for nearly a quarter of a century. Died Sept. 6, 1888.

Wal'ler, in *Texas*, a S.E. co.; *area*, 500 sq. m.; bounded W. by the Brazos river. *Surface*, slightly undulating, chiefly prairie; *soil*, fertile, especially in the Brazos bottom. *Cap.* Hempstead, or Hempstead Center. *Pop.* (1897) 13,350.

Wall'-flow'er, *n.* (*Humor.*) A person, especially a woman, who, at a ball or party, does not join the dance, but sits or stands by the wall.

Wall'hofen, Pauline (Lucca), vocalist, was born in Vienna, Austria, of Jewish parents, in 1842; after receiving a musical training under Uschmann and Lévy, she appeared in 1859 at Olmutz, and soon after at Prague in *Norma* and *Les Huguenots*. Through the influence of Meyerbeer she secured an engagement in Berlin in 1861; within the next ten years she had received world-wide recognition, singing in the principal capitals of Europe, and in the U. S. Since 1875 she has resided in Vienna. She married Baron von Rohden in 1865; was later divorced, and married Herr von Wallhofen.

Wal'lowa, in *Oregon*, an extreme N.E co.; *area*, 2,890 sq. m.; bounded E. by Snake river, and N.W. by the Grande Ronde river. *Surface*, varied, mountains, rolling hills, and valleys; *soil*, fertile and well watered. Has fine agricultural land, grazing land, immense tracts of timber, fine marble, building stone, silver and galena. *Cap.* Enterprise. *Pop.* (1897) 4,220.

Wall'-pa'per, *n.* (*Manuf.*) The Chinese used paper for wall decoration at an early date, and there are instances of it in Europe as early as the 16th century, though it did not come into general use until the 18th century. Some of the earlier designs were all pictures, with panels of plain paper between. They were made by block printing and stencilling. When paper became obtainable in the roll, cylinder printing was introduced, the machines employed being similar to those used in calico printing. The paper is run between a large central cylinder and a set of pattern-cylinders, each bearing that portion of a pattern which is to appear in a certain color, and having its own appropriate color-fountain. The pattern-cylinders are usually made of wood, into which thin strips of brass are driven to outline the pattern, the interstices being filled in with felt. Some of the more expensive patterns are still made by hand. For gold effects, the paper is usually printed in yellow size, and a bronzing powder dusted on before the size has time to dry; or the real gold leaf may be applied. Flock paper is also made by size printing, and dusting with flock (which is finely comminuted wool), dyed to some appropriate color. Satin papers are made by finishing with powdered steatite and polishing. The quality of paper used for hangings is different from that required for printing, the requisites being a stout fiber, and a soft surface that will easily take the colors. Sometimes very thick and tough paper is employed, and embossed and tinted in imitation of stamped leather. Originally, wall-papers were regarded as cheap substitutes for really ornamental wall hangings, but as they have improved in design, and are hung with taste for general effect, they have come to be regarded as suitable in handsome apartments.

Wall-tree. *n.* (*Hort.*) A fruit tree trained on walls for the better exposure of the fruit to sunshine, and for sake of the heat radiated from the wall—a practice especially followed in Great Britain. Trees are trained on walls in hothouses as well as in the open air. Flued walls are often used, the fruit being thus partially forced by artificial heat; and screens of various kinds, as of reeds, canvas, and oiled paper, are sometimes employed to protect blossoms in spring. Woollen nets are also much used for this purpose, and a net even with wide meshes affords much protection from spring frosts. Wall-trees intended permanently to occupy the wall, are generally trained in the nursery with a dwarf stem only five or six inches in length, so that the branches may cover the whole wall, and no available part of it may be lost. It is usual, however, in planting to introduce *riders* alternately with the permanent wall-trees, which, are grafted or budded on tall stocks, and occupy part of the wall till the other trees have

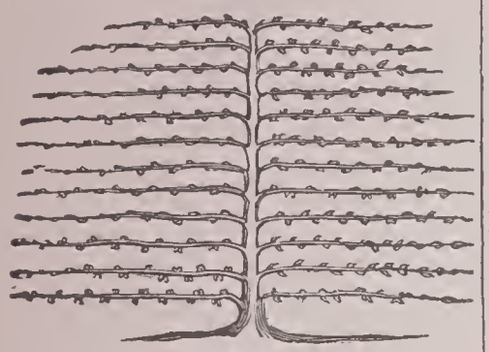

Fig. 3093.—HORIZONTAL TRAINING.

become large enough to require it all for themselves, being often trained into a star shape. Different modes of training wall-trees are practiced, of which the principal are known as *fan training* and *horizontal training* (Fig. 3093). In the former the branches are arranged like the spokes of a fan; in the latter a main stem is led up, from which they are spread out horizontally on both sides. There is a Dutch mode of training, which consists in leading two chief branches horizontally to right and left, and training shoots from them straight up to the top of the wall. It is necessary for the gardener in training wall-trees to consider the habit of each kind, particularly whether fruit is chiefly to be expected on young branches or on the *spurs* of older branches. Superfluous branches must in all cases be carefully removed, and among these are to be reckoned all *foreright shoots*, or branches which project straight from the wall.

Walpel'lo, in *Iowa*, a S.S.E. co.; *area*, 432 sq. m.; intersected by Des Moines river. *Surface*, undulating, prairie and forest; *soil*, fertile; coal and limestone; has extensive manufacturing interests. *Cap.* Ottumwa. *Pop.* (1895) 33,293.

Walsh, in *North Dakota*, a N.E. co.; *area*, 1,584 sq. m.; bounded E. by the Red River of the North, and also drained by Forest river and the North and South Forks of Park river. Eastern half of surface, level prairie; western half, undulating; *soil*, a very fertile black loam watered by timbered streams. *Cap.* Grafton. *Pop.* (1897) 20,200.

Wal'ter, JOHN, journalist, was born in England in 1739; in 1785 he established a newspaper, *The London Daily Universal Register;* in 1788 the name was changed to the *Times*. Mr. *W.* died Nov. 6, 1812, and the management of the *Times* devolved upon his son, John.

Walter, JOHN, journalist, son of the foregoing Walter, was born in 1784; becoming manager of the *Times* in 1803, he organized a system of press dispatches from abroad, more rapid than those furnished by the government; through this means the news of the battle of Waterloo and other events appeared in the *Times* ahead of the official dispatches. In 1814 he introduced steam-power presses; raised the standard of literary excellence by securing the ablest writers and those who most correctly reflected the best official and social circles. Died in 1847.

Walter, JOHN, journalist, son of the foregoing, was born in London in 1818; educated at Eton and Exeter College, Oxford, graduating in 1843. In 1847 he was elected to Parliament for Nottingham, which he represented for 12 years; was member for Berks from 1859 till 1885, with the exception of the election of 1865. In his conduct of the *Times* he continued the progressive policy of his predecessors. Died Nov. 3, 1894.

Wal'worth, in *South Dakota*, a N. co.; *area*, 740 sq. m.; bounded W. by Missouri river. *Surface*, undulating; *soil*, very fertile. Agriculture and stock raising are the chief industries. *Cap.* Bangor. *Pop.* (1895) 2,480.

Wame'go, in *Kansas*, a post-village of Pottawatomie co., 37 m. W. by N. of Topeka. *Pop.* (1895) 1,410.

Wan'amaker, JOHN, merchant, was born in Philadelphia, Pa., July 11, 1837; educated in the public schools. In 1861 he began business ventures of his own, and in 1876 became the head of the extensive clothing, dry goods, and miscellaneous business in Philadelphia. In the conduct of his business he introduced the profit-sharing system; in 1888–89 he distributed more than $100,000 among his employees. In 1858 he founded Bethany Presbyterian Church and Sunday-school, and for many years was president of the Young Men's Christian Association of Philadelphia. He was Postmaster-General of the U. S. under President Harrison (1889–93).

Wan'dering Jew. See JEW.

(*Bot.*) Any one of several trailing plants cultivated in hanging-baskets and window-gardens.

Wap'pinger's Falls, in *New York*, a post-village of Dutchess co., 8 m. S. of Poughkeepsie; has excellent water-power. Here are large print works, several machine shops, and other manufactures. *Pop.* (1897) 4,200.

War Col'lege, The Na'val. (*Navy.*) An institution under the care of the Secretary of the U. S. Navy, having a large building on Coasters Harbor Island, Newport, R. I., for the instruction of navy officers in strategy and "the science of naval warfare as distinguished from the development of naval material." To it are assigned, in the intervals of sea-service, some 30 officers of various ranks, who listen to lectures upon strategy, tactics, International law, maritime interests of the United States, and new questions arising in respect to naval science. They also engage in the solving of problems and games of defence and attack relating to given coast-districts, and make careful studies of all the elements required for given supposable operations in various places and circumstances. The college was founded by Admiral Stephen B. Luce, about 1885, and among its first presidents was Capt. A. T. Mahan, whose writings upon the influence of sea-power in history and cognate subjects were suggested and begun there. Capt. H. C. Taylor, U. S. N., was one of his most eminent successors.

Ward, ARTEMUS. See BROWNE, CHARLES F.

Ward, ELIZABETH STUART PHELPS, was born at Andover, Mass., Aug. 13, 1844; daughter of Rev. Austin Phelps, professor in the Theological Seminary; educated at Andover, under her father's supervision; she became interested in various reformatory enterprises, and many of her earlier sketches reflect her purpose in this direction. She began to write for publication in early youth, her first book, *Ellen's Idol*, being published in 1864. Many of her early writings were for juvenile readers; her later books have dealt with problems for mature minds. Among her works are "*The Tiny Series*" and "*The Gypsy Series*," of four volumes each; *The Gates Ajar* (1868); *The Silent Partner* (1870); *The Story of Avis* (1877); *Doctor Zay* (1884); *Come Forth* (1891); *The Supply of St. Agatha* (1896), &c. She has published two volumes of verse, and a series of autobiographical reminiscences, published in *McClure's Magazine*. In 1888, she married her cousin, Rev. Herbert D. Ward.

Ward, FREDERICK TOWNSEND, soldier, was born at Salem, Mass., Nov. 29, 1831. He served in the French army in the Crimean War; in 1860 he entered the service of the Chinese Emperor in the war against the Taiping rebels, offering to capture cities for a fixed price each. He organized bands of soldiers, training them in European tactics; captured the city of Sungkiang, and the following year captured Ningpo. For his services he was made a mandarin of the fourth degree and admiral-general. He became a subject of the Emperor, and married the daughter of an influential native. Sept. 21, 1862, in an assault on Tse-ki, near Ningpo, he was killed; Gen. Gordon succeeded to the command. *W.* was buried in the Confucian cemetery at Ningpo, and the Chinese raised a great mausoleum in his honor.

Ward, JOHN QUINCY ADAMS, sculptor, was born at Urbana, Ohio, in 1830. He studied under Henry K. Browne, in Brooklyn, N. Y., working in his studio for 6 years; afterward he spent a year or two in Washington, modelling busts, and preparing designs for future works. In 1861, took a studio in New York, and, among other things, finished *The Escaped Slave*, in bronze. In 1863, visited the Indians, and passed several months among them, making studies with reference to his statue of *The Indian Hunter*, which he completed in bronze on his return. This statue was purchased by citizens of New York, and presented to Central Park. Later, he executed in bronze statues of *Com. W. C. Perry* (with basso-relievos for pedestal); *The Good Samaritan; Seventh Regiment Memorial Statue; Colossal Group in Marble for Equitable Building; Gen. Reynolds;* a colossal *Shakespeare*, now in Central Park, N. Y., and a colossal *Washington*, which stands in front of the sub-treasury building in Wall Street, New York. He was elected a member of the National Academy of Design, in 1863; was elected for the second time to the office of vice-president of that institution in 1871, and president in 1872. He is regarded as one of the best American sculptors.

Ward, MARY AUGUSTA ARNOLD (MRS. HUMPHREY), novelist, was born in Tasmania, where her father, Rev. Thomas Arnold, held an educational position; in 1856 the family returned to England. In 1872 she was married to Thomas Humphrey Ward, a writer on the London *Times*. She began her literary work by writing critical articles for *MacMillan's Magazine*, &c.; her first novel, *Miss Bretherton*, was issued in 1884; in 1888 she published *Robert Elsmere*, a book that, at the time, aroused active discussion and provoked animated argument among theological debaters. Other books which she has published since are, *The History of David Grieve* (1892); *Marcella* (1894); and *Sir George Tressady* (1896). In 1890, Mrs. Ward took an active part in founding University Hall in London, an institution designed for the purpose of carrying into practical effect the theories set forth in *Robert Elsmere*.

Ward, in *North Dakota*, a N.W. co.; *area*, 5,955 sq. m.; drained by Mouse river. *Surface*, undulating; *soil*, fertile and well watered; fine grazing country; has an abundance of fine lignite coal. *Cap.* Minot. *Pop.* (1897) 2,340.

Ward, in *Texas*, a W. co.; *area*, 1,160 sq. m.; bounded S. and W. by the Pecos river. Unorganized. *Pop.* (1897) 160.

War'ing, GEORGE E., sanitarian, was born in Poundridge, N. Y., July 4, 1833; was drainage engineer of Central Park, New York city (1857–61); served throughout the Civil War, after Jan., 1862, as colonel of the 4th Missouri Cavalry. In 1879, he was appointed expert and special agent of the tenth census of the U. S., with charge of the social statistics of cities; in 1882, he became a member of the National Board of Health. He devised the new system of drainage adopted by the city of Memphis, after the yellow fever scourge of 1878; he also originated many improvements in connection with the drainage of houses and towns. In 1895 he was appointed street commissioner of New York city, and revolutionized the methods before prevailing, giving the city effective and honest service. In 1898 he went to Havana, where he sought to remove the causes of yellow fever, but he took this fever himself and died October 29 of that year.

War'ner, CHARLES DUDLEY, author, was born in Plainfield, Mass., Sept. 12, 1829; graduated at Hamilton College, in 1851, and at the Law School of the University of Penna., in 1856; practiced in Chicago, until 1860; was editor of the *Press*, Hartford, Conn., in 1861, and of the Hartford *Courant*, in 1867. He travelled in Europe; in 1884, became associate editor of *Harper's Magazine*, contributing several series of critical articles. Among his books are: *My Summer in a Garden* (1871); *Backlog Studies* (1872); *In the Levant* (1876); *In the Wilderness* (1878); *Their Pilgrimage* (1886); *A Little Journey in the World* (1892); *The Golden House* (1894), &c. In 1884–92, he conducted the "Editor's Drawer" in *Harper's Magazine*, and afterward the "Editor's Study." In 1896, he began the editorship of the *Library of the World's Best Literature* a work in 30 octavo volumes. Died Oct. 20, 1900.

Warner, SUSAN, novelist, was born in New York city, July 11, 1819; she made her literary reputation with her first novel, *The Wide, Wide World* (1851); other novels from her pen are *Queechy* (1852); *The Old Helmet* (1863); *Daisy* (1868); *Wych Hazel* (1876); *Nobody* (1883); *Daisy Plains* (1885), &c. Died Mar. 17, 1885.

War'ren, JOSEPH, physician and Continental patriot, was born at Roxbury, Mass., June 11, 1741; graduated at Harvard (1759); studied medicine, and practiced in Boston (1762); was one of the Committee of Safety appointed after the Boston massacre of March 5, 1770; in 1774 he drew up the "Suffolk Resolves," which placed Massachusetts virtually in a state of rebellion against Great Britain; on May 31, 1775, he was chosen president of the Provincial Congress, thus becoming executive officer of the provisional government. In the battle of Bunker Hill, June 17, 1775, while commanding the militia, he was instantly killed.

Warren, SAMUEL, novelist and legal writer, was born in Denbighshire, Wales, in 1807; graduated at Edinburgh University; was called to the bar (1837), and became recorder of Hull (1852). His novels, *The Diary of a Late Physician* and *Ten Thousand a Year*, were very popular. Of his legal writings, perhaps the most important is *Blackstone Systematically Abridged* (1857). Died in 1877.

Warren, SAMUEL PROWSE, organist, was born in Montreal, Canada, Feb. 18, 1841; educated in Montreal and in Berlin. Returning to America (1864), he settled in New York; was organist of Grace Church (1868–94). He gave organ recitals, with miscellaneous programmes covering a wide field of selections; his compositions include organ music, and solos and part-songs.

War'rington, in *Florida*, a post-town of Escambia co. *Pop.* (1897) 1,574.

War'tegg (Mas.), MINNIE, singer, better known by her maiden name of MINNIE HAUCK, was born in New York city, Nov. 16, 1852. The family removed to New Orleans in 1855; in 1865 she made her first appearance at a concert. During the years that followed she was a pupil of Errani, in New York, and in 1868 sang there in opera, as *Amina*. In the autumn of 1868, she went to London, and (1869–73) sang in Vienna, making occasional tours on the Continent. Her signal success was in the Bizet's *Carmen*, which has since been associated with her name. She has been successful in the Wagner opera, her *Elsa* in *Lohengrin* being especially approved by the composer. In 1881 she was married to Count Ernst von Hesse-Wartegg, since which date she has appeared on the stage only at rare intervals.

Wa'satch, in *Utah*, a N.E. co.; *area*, 3,444 sq. m.; drained by Uintah river and smaller streams. *Surface*, mountainous; Wasatch Mountains in the west and Uintah Mountains in the N.; much of the country is desert. *Cap.* Heber. *Pop.* (1895) 4,408.

Wase'ca, in *Minnesota*, a city, cap. of Waseca co., on the C. & N. W. and Minn. & St. L. R.Rs., 26 m. E. by S. of Mankato. *Pop.* (1895) 2,780.

Wash'abaugh, in *South Dakota*, a S.W. co.; *area*, 1,260 sq. m. Grazing the leading industry. Unorganized.

Wash'burn, WILLIAM BARRETT, was born in Winchendon, Mass., Jan. 31, 1820; graduated at Yale (1844); engaged in manufacturing and banking at Greenfield, Mass.; was elected State senator (1850), and member of the Assembly (1854); was a member of Congress (1862–72); governor of Massachusetts (1872–74); and U. S. senator (1874–75) to fill the vacancy caused by the death of Charles Sumner. Died Oct. 5, 1887.

Wash'burn, WILLIAM DREW, lawyer, brother of Hon. E. B. Washburne, was born in Livermore, Me., Jan. 14, 1831; graduated at Bowdoin (1854); studied law, and began to practice in Minneapolis, Minn. (1857); was elected to the legislature in 1858 and in 1871; was a member of Congress from Minnesota (1879–85); and s U. S. senator (1889–95). He is interested in various manufacturing enterprises in Minneapolis, and is president of the Minneapolis & St. Louis Railroad, as well as of the "Soo" line.

Washburn, in *Wisconsin*, a N.W. co.; *area*, 864 sq. m.; drained by Namakagon river and several lakes. *Surface*, mostly level, somewhat broken by hills; *soil*, one-half excellent farming land, the rest high and timbered. Lumber is the chief product. *Cap.* Shell Lake. *Pop.* (1895) 4,266.

—A city, cap. of Bayfield co., on Lake Superior, 12 m. S. of Bayfield. Has a good lake trade. *Pop.* (1895) 5,178.

Wash'burne, ELIHU BENJAMIN, statesman, was born in Livermore, Me., Sept. 23, 1816; had some early experience in journalism, but finally studied law at Harvard; was admitted to the bar (1840), and began practice in Galena, Ill. He was elected to Congress in 1852, and held office until 1869. He was called the "Father of the House" from his long continuous term of service; and his close scrutiny of all demands on the treasury won for him the name of the "Watch-dog of the Treasury." He opposed all measures that tended to subordinate the claims of the U. S. government to those of corporations or individuals. In 1869 President Grant appointed him secretary of state; soon after he was appointed minister plenipotentiary to France. During the Franco-German War the American legation was the refuge of Germans and other foreigners who could not leave Paris, and *W.*, acting as the representative for these governments, gave them assured protection. For this service he received special honors from the Emperor of Germany and Bismarck, as well as from the French leaders, Gambetta and Thiers. His *Recollections of a Minister to France* was published in 1887. After his return to the U. S. he resided in Chicago until his death, Oct. 22, 1887. He was the only member of his family who spelled his name with a final *e*.

Wash'ington, BOOKER TALIAFERRO, educator, was born a slave, at Hale's Ford, Va., April 18, 1858. After the war his mother removed with him to West Va., where he worked in the mines, attending school in the winter months. Several years of his youth were spent at service in New England; in 1871 he entered General Armstrong's school for colored boys at Hampton, Va., graduating with honors in 1875; he then attended Wayland Seminary, in Washington, D. C. In 1879 he became a teacher at Hampton, and two years later was placed in charge of the Tuskegee Institute, a school having only 30 students, and no available buildings, to which the State of Alabama made an annual appropriation of $2,000. Here he began to develop a method similar to that followed in the Hampton school, and gradually built up the Institute, until in 1897 it had 867 students, 79 instructors, 2,460 acres of land, and 37 buildings, the property valuation being $300,000. Twenty-five industries are carried on by the students; all but three of the buildings were built by the students, even to the making of the bricks and the sawing of the planks. All trades are taught, but especially the various branches of farming. The chief object is to train the colored youth in various self-supporting occupations. Girls are also taught the branches most useful to them. The position taken by *W.* is that the race problem will be solved when the negro becomes a valuable workman, and financially independent. At the Atlanta Exposition, on Sept. 18, 1895, he made an address that attracted the attention of all the country, and won for him the sympathy and respect of all classes.

Washington, in *Alabama*, a W.S.W. co., bordering on Mississippi; *area*, 960 sq. m. *Rivers.* Tombigbee and Escatappa. *Surface*, undulating; *soil*, sandy and poor. *Cap.* St. Stephens. *Pop.* (1897) 8,550.

Washington, in *Arkansas*, a N. W. co., bordering on Indian Territory; *area*, 900 sq. m. *Rivers.* White and Illinois, a branch of the Arkansas. *Surface*, diversified; *soil*, fertile. *Cap.* Fayetteville.

—A township of Conway co.

—A post-village, cap. of Hempstead co., 125 m. S. W. of Little Rock.

—A township of Independence co.

—A township of Lawrence co.

—A township of Ouachita co.

—A township of Sevier co.

—A township of Sharpe co.

Washington, in *California*, a township of Alameda co.

—A post-village and township of Nevada co., 22 m. E.N.E. of Nevada.

—A township of Plumas co.

—A township of Sonoma co.

—A village and township of Yolo co.

Washington, in *Colorado*, a N.E. co.; *area*, 1,080 sq. m.; the N.W. corner is intersected by the South Platte river, and it is also drained by Red Willow creek. *Surface*, rolling; *soil*, fertile, dark loam; no timber. *Cap.* Akron. *Pop.* (1897) 2,550.

Washington, in *Idaho*, a W. co.; *area*, 2,700 sq. m.; bounded W. by Snake river. *Surface*, mountainous, with fertile valleys; *soil*, a black loam easily irrigated; large tracts of fir, pine, tamarack, &c. *Min.* Gold, silver, copper, and lead. *Cap.* Weiser. *Pop.* (1897) 4,340.

Washington, in *South Dakota*, a S.W. co.; *area*, 1,510 sq. m.; drained by White river. Grazing is the leading industry. Unorganized.

Washington and Lee University. (*Educ.*) In 1749 Robert Alexander, one of three brothers who emigrated to America from Ireland in 1736, started a school, which he called the Augusta Academy, for the county of Virginia, in which he lived. Under this name the school existed from 1749 to 1776. It was moved to Mount Pleasant, near Fairfield, within the bounds of the adjoining (Rockbridge) county, in which is the famous Natural Bridge, beneath which flows a tributary of the James river. While at Mount Pleasant the name of the school was changed to Liberty Hall Academy, which appellation it retained from 1776 to 1798. In 1780 it was again removed to a place near Lexington, the county-town of Rockbridge. In 1796 it received from Gen. Washington 100 shares of stock in the James River Canal Company, which had been voted to him by the General Assembly of Virginia, but which he preferred to be donated to some public object, suggesting the academy. The legislature afterward commuted the stock to an interest-bearing fund of $50,000; thereupon, in 1798, the school was called the Washington Academy. It was finally removed, in 1803, within the corporate limits of Lexington. In 1813 it became Washington College. It received, in 1803, a fund of $25,000 from the Society of the Cincinnati. During the Civil War, when Gen. "Stonewall" Jackson was one of its professors, the college was closed and its scientific apparatus was destroyed. It was reorganized in 1865 under the presidency of Gen. Robert E. Lee. On his death, in 1870, the name was changed to its present form, as a mark of gratitude to the benefactor who had "rescued the institution from the obliteration that threatened it after the war." It has found many friends, at the North as well as the South, who have increased the endowment to $641,000, its revenue in 1896 being $45,000. In that year it had 18 instructors and 223 students, with 30,000 volumes in its library.

Wash'ington Heights, in *Illinois*, a village of Cook co., 12 m. S. of Chicago, of which it is a suburb.

Washington Mills, in *New York*, a post-village of Oneida co. *Pop.* (1897) 1,250.

Washington University. (*Educ.*) A non-sectarian, co-educational institution at St. Louis, Mo., incorporated in 1853. It has been formed by the conglomeration of six schools started at different times: The undergraduate department, which includes the college (1859); the St. Louis Law School (1867); the O'Fallon Polytechnic School (1870); the Henry Shaw School of Botany (1886); the School of Fine Arts; the St. Louis Medical College (1891); and the Missouri Dental College (1892). The college curriculum is identical with that in similar institutions. The polytechnic school has courses in civil engineering, mechanical engineering, chemistry, mining and metallurgy, building and architecture, each course including four years' instruction. To the university are attached three secondary schools: The Smith Academy for boys (1854); the Mary Institute for girls (1859); and the manual training school (1879). The university had in 1896, in all departments, 175 instructors, 1,823 students, and special reference libraries containing altogether 15,000 volumes. Its real estate in 1896 was worth $625,000, its total endowment was $800,000, and its revenues, exclusive of benefactions, were $160,000.

Wash'ita, in *Oklahoma*, a W. co.; drained by Washita river. *Surface*, undulating in parts, level in others; *soil*, black sandy loam, very fertile; some timber. *Cap.* Cloudchief. *Pop.* (1897) 10,000.

Wash'out, *n.* An opening or channel made by a torrent or flooding rain, as along a wagon-road or railway track.

Wa'ter Val'ley, in *Mississippi*, a post-town, cap. of Yalabusha co., 17 m. S. of Oxford; has railroad car and machine shops. *Pop.* (1897) 3,150.

Wa'ter-bag, *n.* A bag for holding water; especially a skin bag as used in the East for carrying or distributing water; or a rubber bag for holding water, usually hot, to be applied to some part of the body, as for inducing perspiration.

Wa'ter-gas, *n.* (*Chem.*) Illuminating gas made by the decomposition of water. The water is used in the form of steam, the hydrogen being liberated from the oxygen and made to take up hydrocarbons. The theory of the production of water-gas is based upon the chemical fact that carbon, in a highly heated state, has so strong an affinity for oxygen that it will decompose steam and combine with the oxygen, which is one of its constituents. Air consists principally of a mixture of two gases, oxygen and nitrogen, in the proportion, by volume, of about one part oxygen to four parts nitrogen. There is also in the air a little vapor of water and carbonic acid gas, but we need take no account of these. Oxygen is the active principle of the air, and is the great supporter of combustion. Nitrogen is a gas that will not support combustion, and by its presence in the air it serves to dilute the oxygen. An atmosphere of pure oxygen is too intense for animal life; it would also cause so hot a fire that few materials could withstand the heat. Water is composed of two gases, hydrogen and oxygen, combined in the proportion, by volume, of two parts hydrogen to one part oxygen. Hydrogen is the lightest gas known, and in burning produces per pound the greatest amount of heat.

In order to avail themselves of the valuable qualities of so common a gas as hydrogen, the manufacturers of water-gas employ a cupola, in which anthracite coal is heated to incandescence with the aid of an air-blast. When the incandescence is satisfactory, the air-blast is turned off, and superheated steam is allowed to pass through the red-hot coals. This liberates the hydrogen, while the carbon of the coal unites with the oxygen to form carbonic oxide gas. These two gases mixed together form what is termed water-gas, which burns with an intense heat, but if used at this stage would give out only a pale blue flame. In order to give it illuminating power, the gas is passed to an illuminator, where it takes up a quantity of vaporized naphtha. The oil-vapor and the water-gas are made to pass together through a carburetter and superheater, where contact with the surfaces of the highly heated checker-bricks results in the final product becoming "fixed," *i. e.*, made a permanent gas that can be distributed under varying conditions of temperature and pressure without condensing or losing any of its valuable light-giving constituents. The gas passes from the superheater through the oil heater to the washer and thence to the condensing, scrubbing, and purifying apparatus, which is not essentially different from that employed in coal-gas works, going finally to the gas-holder, to be distributed to consumers. For a description of the manufacture of coal-gas, see GASLIGHT.

Wa'tertown, in *South Dakota*, a city, cap. of Codington co., about 100 m. N. of Sioux Falls. A manufacturing city; has mills, foundries, machine shops, manufactures of plows and harrows, sash and doors, carriages and wagons, paint, varnish, &c.; numerous elevators and grain warehouses, and is the center of a rich agricultural and stock-raising region, whose products it ships in large quantities. *Pop.* (1895) 2,709.

Wa'ter-works, *n. pl.* (*Engin.*) Establishments for providing a supply of water to dwellers in cities and towns, where the population is too dense to be satisfied with wells, are known by this name. The principle of their construction is simple. Water from some convenient stream or lake is led into a reservoir and retained till required, or pumped to a higher level, from which a pressure is obtained to fill the mains and pipes that distribute the water over the district. In hilly regions it is usually possible to obtain the use of streams sufficiently elevated to render it possible to form a reservoir by means of a simple dam. Where such are not obtainable in the limits of the municipality, it is often necessary to buy the water-shed of some less populous district, and divert the water to the desired use. If a sufficient quantity of water cannot be had at a proper elevation, it becomes necessary to resort to pumping. The location of a reservoir with a water-level a little above the highest stories of the buildings in the district is sufficient to supply them by pressure, but if the streams are lower than the reservoir, the water can be pumped up into them. If there is no high point at which a reservoir may be placed to give the pressure, it becomes necessary to use a standpipe or water-tower, which is connected with the mains, and kept filled by pumping. In some places it is impossible to find streams of sufficient size, and then artesian wells are driven to obtain a supply. Such water is usually very pure and palatable. Where it becomes necessary to use water which is not wholly satisfactory, as river-water, receiving more or less unwholesome drainage, the supply may be made potable by filtration and deposition. Even very foul water may be purified in this way. Filter-beds, onto which water may be pumped for purification, are made as follows: A large tank, resembling a small reservoir, of perhaps an acre in extent, is built about with a wall and bank, and furnished with a floor of rubble or old bricks, upon which is spread broken stone, coarse gravel, fine gravel, and finally sand. From 3 to 4 feet of material thus arranged will allow the water admitted above to flow through the interstices to a lower outlet, retaining the impurities in the sand. In laying out the water-pipe system of a town or city the mains may be laid at any convenient incline, up hill or down, as water seeks its level, but they must always be located below the frost line to avoid danger of bursting. The consumption of water in European cities is from 40 to 50 gallons per head per diem, but in American cities frequently reaches double that amount. See HOLLY SYSTEM; FILTRATION OF WATER.

Waton'ga, in *Oklahoma*, a post-village, cap. of Blaine co. *Pop.* (1897) 450.

Wat'son, JAMES CRAIG, astronomer, was born in Fengal, Ontario, Can., Jan. 28, 1838; graduated at the University of Michigan (1857), having devoted his attention to astronomy. Before his graduation he had discovered a comet. He became professor of Astronomy and director of the observatory there (1863). In 1879 he accepted similar positions at the University of Wisconsin. He discovered 23 asteroids, several of the smaller comets; and his calculation of the orbit of Donati's comet is accepted as authoritative. In 1869 he went to Iowa, and in 1870 to Sicily, to observe the eclipses of the sun. He had charge of the American party that went to Pekin, China, in 1874, to observe the transit of Venus. In 1876 he was one of the judges of the award at the Centennial Exposition in Philadelphia; in 1878 he conducted the government expedition to Wyoming to observe the total solar eclipse. He published a *Popular Treatise on Comets* (1860), &c. Died Nov. 23, 1880.

Watson, JOHN. See IAN MACLAREN.

Watson, THOMAS E., journalist and politician, was born in Columbia co., Ga., Sept. 5, 1856; admitted to the bar (1876); elected to the legislature (1882); Democratic State elector-at-large (1888); elected to the Fifty-second Congress from Georgia; the nominee of the People's Party for Vice-President in the campaign of 1896.

Watson, WILLIAM, poet, was born in Wharfedale, Yorkshire, England, in 1856. In 1892 he published his poem, entitled *Wordsworth's Grave*, which at once made him famous. The same year he published the memor-

ial poem, *Lachrymæ Musarum*, which was pronounced the finest tribute paid to Tennyson. He has previously published *Love Lyrics; Epigrams of Art, Life, and Nature;* and *The Prince's Quest*. In 1893 he published *The Eloping Angels*, and a volume of essays entitled *Excursions in Criticism*. A volume of poems appeared in 1894, and *The Father of the Forest* in 1895. In 1896 he wrote sonnets on the Sultan that conveyed through the medium of verse some stern moral and political criticism. In recognition of Watson's talent, he has been granted a civil-service pension of £100.

Wat'terson, Henry, journalist, was born in Washington, D. C., Feb. 16, 1840; began his career as a writer for *The Democratic Review* and *The States;* in 1861 went to Nashville and edited the *Republican Banner;* joined the Confederate ranks, and served as staff-officer during 1861–63, and as chief of scouts in Johnston's army. After the war he returned to edit the *Banner*, but soon removed to Louisville, where (1867) he founded the *Journal*. This paper was later consolidated with the *Courier*, and became the *Courier-Journal*, one of the foremost of American newspapers. *W.* presided over the Democratic National Convention of 1876, and was a strong supporter of Tilden; he was a member of every succeeding convention, representing Kentucky, and exerting a marked influence on the action taken by the convention. In 1876–77, he was a member of Congress, serving with distinction, but declining renomination. He is an active public speaker and a voluminous writer on economic subjects.

Watts, George Frederick, painter, was born in London, England, in 1820; is eminent as a portrait painter, many notable people having been among his sitters. His other work is chiefly ideal or mythological in subject, but he has done some strong work in historical lines, and has executed some admirable frescoes. He was elected a Royal Academician in 1867, but resigned in 1896, after the death of Millais.

Wauko'mis, in *Oklahoma*, a post-village of Garfield co., 9 m. from Enid. *Pop.* (1897) 500.

Wave'-mo'tors, *n. pl.* (*Mech.*) Motors employing the force of the waves on the seashore have been invented in considerable numbers, but so far as known none of them have ever been used except in an isolated and experimental way. Their unreliability as a source of steady power, and their liability to destruction in storms, combined with their necessary location at points where great demand seldom exists for power, seem to be the reasons which have militated against their use. One class of these motors utilizes the force of waves rolling up the beach to push horizontal floats hanging from upright levers, to which a reciprocating motion is given, so that a set of paddles connected by pawls and ratchets with an overhead shaft, may cause continuous rotation of the shaft. Of this pattern is the Whitesides wave-motor, tested at Oakland, Cal. The Stahl wave-motor is typical of another class, in which levers bearing paddles are oscillated by the waves so as to turn an overhead horizontal wheel, through the medium of pawls and ratchets. More simple forms have a horizontal board or boards suspended so as to swing a few inches above the sand of the beach, the oscillations being made use of to drive a crank on shore. This form cannot be expected to produce as regular a motion as either of the two previously mentioned. Another method of utilizing the power of a wave to drive a motor is to use a broad float that lies free in the water within certain limitations to operate pawls and drive a wheel by means of connecting-rods and pawls, whose positions are affected by its changes of level. A still simpler form, making use of the same idea, has a float confined within stakes, where its rise and fall are utilized to produce mechanical motion. It would seem as if some of these motors might be used to charge storage batteries, and deliver power by wire to adjacent points.

Wa'verly, in *Illinois*, a post-village of Morgan co., 18 m. S. E. of Jacksonville; has flour mills, creameries, and tile factory. *Pop.* (1897) 1,500.

Way'eross, in *Georgia*, a post-town, cap. of Ware co., 60 m. W. of Brunswick. *Pop.* (1897) 4,000.

Way'land, Heman Lincoln, clergyman, educator, and journalist, was born at Providence, R. I., April 23, 1830; graduated at Brown University (1849) and Newton Theological Seminary; taught in the University of Rochester (1852–54), was pastor of a Baptist church at Worcester, Mass. (1854–61), and chaplain of the 7th Connecticut Volunteers (1861–64); held the chair of Rhetoric and Logic at Kalamazoo College (1865–70); was president of Franklin College, Indiana (1870–72); edited the *National Baptist* (1872–94), and afterward the *Examiner*. Died Nov. 7, 1898.

Wayne, in *Michigan*, a post-village of Wayne co., 18 m. W. of Detroit. *Pop.* (1894) 1,555.

Wayne, in *Nebraska*, a N.E. co.; *area*, 444 sq. m.; intersected by Logan creek and also drained by Plum creek, both affluents of the Elkhorn river. *Surface*, undulating; timber scarce; *soil*, fertile. *Cap.* Wayne. *Pop.* (1897) 7,000.

—A post-village, cap. of above co., 46 m. W. of Sioux City, Iowa. *Pop.* (1897) 1,500.

Wayne, in *Pennsylvania*, a post-village of Delaware co., on the Penna. R.R., 13½ m. N.W. of Philadelphia. *Pop.* (1897) 2,000.

Weak'fish, *n.* See Sciænidæ.

Weath'er Bu'reau. (*U. S. Govt.*) A bureau of the U. S. Department of Agriculture, at Washington, whose business it is to observe and collect information as to the weather in all parts of the country and contiguous regions; to calculate a forecast of it for each of various defined districts, and to publish these promptly, so that the people may know the probabilities as to local weather in each district.

The principles underlying those constant regional changes of temperature, atmospheric movements, and relative dampness or dryness of the air, which constitute *weather*, are discussed in the article Meteorology. See also Atmosphere, Barometer, Climate, Clouds, Rain, Temperature, Thermometer, Wind, and similar topics. It being of the highest importance, in many practical relations, to know in advance what the weather is likely to be, especially in such pursuits as farming, navigation, and warlike enterprises, men from the beginning of time have endeavored to judge, by a study of the appearances of the sky, the actions of plants and animals, &c., what changes were about to occur; and have called to their aid many fanciful notions, as the influence of the moon, &c. As soon as such instruments as the thermometer, barometer, and hygrometer were invented, systematic observations of temperature, humidity, direction of the winds, and the like, were made in all the more civilized parts of the world, and an enormous mass of classified facts of this kind were long ago collected and recorded. In recent

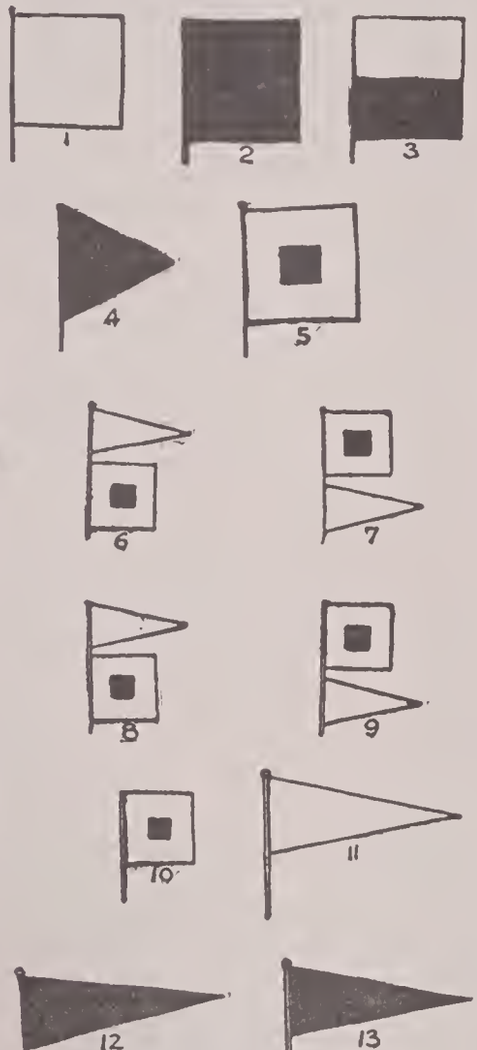

Fig. 3094.—WEATHER BUREAU SIGNALS.

1, white flag, clear weather; *2*, blue flag, rain or snow; *3*, white and blue flag, local rains or snow; *4*, black triangular flag, signal for temperature; *5*, white flag with black center, cold wave; *6*, northeasterly winds; *7*, southeasterly winds; *8*, northwesterly winds; *9*, southwesterly winds; *10*, red flag, black center, storm of violence; *11*, white pennant (on Great Lakes), westerly winds; *12*, red pennant (on Great Lakes), easterly winds; *13*, red pennant (on Coast).

times the United States has taken the lead in this matter. Benjamin Franklin, with that remarkable penetration that made him great, pointed out some of the fundamental climatic facts in America, such as the eastwardly drift of storms in the Northern U. S.; and Thomas Jefferson saw that only by simultaneous observations could truth be discovered, and arranged that weather observations should be taken at the same hours at several points in Virginia.

When the Smithsonian Institution was founded it was one of the earliest cares of Joseph Henry (*q. v.*) to organize a system of simultaneous instrumental weather observations all over the United States, and these were sustained for 40 years or more, and resulted in the collection and publication of several volumes of tabulated meteorological material, which have formed the basis of that science in the United States, and have been of vast service in the science of cosmic meteorology. "Weather prophets" had attempted to grow more scientific than formerly by these studies, forming theories of coincidences and returning "cycles" of weather, which are less trustworthy than the guess of the average farmer or sailor; but real weather-prophets presently arose, and weather-prophecy is now founded upon a scientific basis. This was made possible by the invention and spread of the electric telegraph, enabling one to make immediate use of widely scattered data. As early as 1850, Maury, then the principal student and exponent of oceanic meteorology, and author of numerous works on hydrography, winds, sea-currents, &c., proposed the charting of collected observations; and Henry soon utilized his corps of observers and the telegraph to display upon a map daily, by movable symbols, the state of the weather at various points in the United States. This interested thinking people greatly, but the oncoming of the Civil War interrupted its development. "In 1869," says Prof. Harrington, "the idea was revived and put into practical operation by Prof. Cleveland Abbe, then director of the Cincinnati Observatory. . . . The data were collected by the Western Union Telegraph Company, free of charge, and the enterprise was fostered by the Cincinnati Board of Trade. Professor Abbe drew the maps, and copies of them were struck off in the local office of the telegraph company [and locally distributed]."

So much interest was taken in this matter by business men that an Act of Congress was soon passed requiring the War Department to undertake a similar work for the whole country, with special reference to storm-warnings for the Atlantic coast and the Great Lakes. As was anticipated, this duty was committed to the chief signal officer of the army (see Signal Service), Gen. A. J. Myer, who at once called Professor Abbe to his assistance, and organized a general service with so much celerity that he began to issue bulletins and storm-warnings in Nov., 1870. As this was the direct outcome of the early work of Maury, Henry, and others, who antedated any European efforts of a similar kind, the credit of taking the lead in public forecasting of the weather is universally accorded to the U. S. Nevertheless, the interruption occasioned by the Civil War permitted both France and England to institute governmental weather service earlier than it was begun at Washington. Leverrier, at Paris, began to issue the French weather-maps in 1863; and in England Fitzroy started the British system of meteorological forecasts in 1861. It would be interesting to trace their development, and certain local peculiarities, especially as these, and several other foreign countries, now coöperate with America; but lack of space prevents, nor is it necessary, since their methods do not essentially differ from, and are largely based upon, those of the American bureau. General Myer's work attracted instant attention and welcome, and he soon came to be known as "Old Probabilities," for all his prognostications were given as "probable" rather than as certain. The large and increasing percentage of correctness established the value of the forecasts, however, and the service grew steadily.

In 1880 Myer died, and his successor, Gen. W. B. Hazen, found the care of this office the greater part of his duty, as chief signal officer, for seven years. He was followed by Gen. A. W. Greely, who had already won fame by his arctic studies. The annual expenditure was now about $1,000,000, a considerable part of which, especially in Hazen's time, was spent for purely scientific ends, such as special arctic explorations, stations in Alaska, &c. Public sentiment favored less of this, and disliked the routine of the War Department, where every observer was an enlisted "sergeant," or "corporal," or "private." Congress therefore transferred the weather service to the Department of Agriculture in 1891, where it became a bureau in charge of Prof. Mark W. Harrington (*q. v.*) until July 1, 1895, when he was succeeded by Willis L. Moore, who had grown up in the bureau. The equipment and methods of the U. S. Weather Bureau are now fully developed, and the forecasts are implicitly relied upon, 9 out of 10 proving true, while the total expense has been reduced to about $850,000 annually. There are now (1897) about 125 telegraphic reporting stations, 30 exchange stations (with other countries), 2,500 voluntary observers reporting to over 40 State weather services (for nearly every State in the Union sustains a similar local service, of which some, as that of Massachusetts and New York, are highly efficient), and over 200 stations reporting floods and other data as to rivers. About 1,700 stations show weather and temperature signals; about 175 stations show storm signals, and 500 signal frosts. Some 100 stations make forecasts, and publish weather-maps, of which about 2,500,000 are issued annually. While the principal and foremost work of all these observers and stations is the collection of data, and the dissemination of daily forecasts derived from them, there is also obtained, systematically, a large amount of meteorological information, which is also published and commented upon by the scientific staff of the bureau in the annual reports and occasional publications, the most important part of which, perhaps, relates to the rainfall of the continent. In this, as in all else, the hearty coöperation of the Canadian Weather Service is of the highest mutual benefit.

The method of weather forecasting is as follows: Twice each day, morning and evening, the observers simultaneously note the conditions at their stations—temperature, cloudiness, humidity, force and direction of the wind, &c., according to the required list—write

them out in the cipher used by the bureau, and telegraph them to Washington, and also to the central (forecasting) station in each district. In each of these stations—the outer ones assisted by advices from Washington—the forecast-official of the day studies them, deduces the probabilities of the weather for the 24 or 36 hours, and hands his statement to the newspaper press-agencies, by whom they are distributed to the morning and afternoon newspapers throughout the country. Every effort is otherwise made to disseminate the information, which is known to the public generally within three or four hours of the collection of the data. Telegraph and railway companies, boards of trade, shipping agencies, and others get the forecast direct, and post it conspicuously; and the weather-map issued daily is posted in thousands of public places within a short time after it is printed. In the interior of the country, where daily newspapers cannot promptly reach farmers and ranchmen, who are most interested, some railway place upon their trains large colored signals, which can be seen by the rural population as the trains run past farms and villages. Steam whistles have also been employed to sound signals. On the coasts lofty lights, rockets, and search-light signals are sometimes employed, especially to warn mariners against dangerous approaching storms. The extension of telephone lines is increasing the facility of spreading this valuable information. At all stations and on many private buildings flags during the day and lanterns at night are hoisted as symbols of prevailing weather or expected changes. These are as follows:

The white flag indicates clear or fair weather; blue flag indicates rain or snow; white and blue flag indicates that local rains or showers will occur, and that the rainfall will not be general. The black triangular flag always refers to the temperature; when placed above number 1, 2, or 3 it indicates warmer weather; when placed below number 1, 2, or 3 it indicates colder weather; when not displayed, the indications are that the temperature will remain stationary, or that the change in temperature will not vary more than five degrees from the temperature of the same hour of the preceding day from June to August, inclusive, seven degrees from November to March, inclusive, and not more than six degrees for the remaining months of the year. A white flag, with black square in center, indicates the approach of a *sudden* and *decided* fall in temperature, and is usually ordered at least twenty-four hours in advance of the cold wave. When No. 5 is displayed, No 4. is always omitted. A special storm flag, red with black square in center, is prescribed for use in North and South Dakota, Minnesota (except at lake stations), Iowa, Nebraska, and Wyoming, to indicate high winds, accompanied by snow, with temperature below freezing. When displayed on poles, the signals should be arranged to read downward; when displayed from horizontal supports a small streamer should be attached to indicate the point from which the signals are to be read.

Another class of flag-signals relates to wind, storm, and hurricane, and these are as follows:

Storm Signals.—A red flag with a black center indicates that a storm of marked violence is expected.

The pennants displayed with the flags indicate the direction of the wind; red, easterly (from north to south); white, westerly (from southwest to north). The pennant *above* the flag indicates that the wind is expected to blow from the northerly quadrants; *below*, from the southerly quadrants.

By night a red light indicates easterly winds, and a white light above a red light westerly winds.

Information Signal.—Red or white pennant displayed alone.—When displayed at stations on the Great Lakes indicates that winds are expected which may prove dangerous to tows and smaller classes of vessels, the red pennant indicating easterly and the white pennant westerly winds.

When displayed at stations on the Atlantic, Pacific, and Gulf coasts indicates that the local observer has received information from the Central Office of a storm covering a limited area, dangerous only for vessels about to sail to certain points, and serves as a notification to shipmasters that information will be given them upon application to the local observer. Only the red pennant is displayed on the coasts. No night information or hurricane signals are displayed.

Hurricane Signal.—Two red flags with black centers, displayed one above the other, indicate the expected approach of tropical hurricanes, and also of those extremely dangerous storms which occasionally move across the Lakes and Northern Atlantic coast.

"The forecaste," says Professor Harrington, "depend on the general shift easterly of the weather existing at any moment over the U. S. This shift is at about the speed of an express train, but is subject to innumerable fluctuations in speed and direction, and the weather conditions, in advancing, may change in intensity or assume new features. The skill of the forecaster lies in foreseeing these fluctuations, and for this long experience, as well as a sort of intuitive tact, is necessary. . . . The art so far has depended chiefly on empirical methods, and advance in this direction seems to be about exhausted. Further progress can hardly be expected except by improvements in the theory of meteorology. . . . There are two directions of advance which give especial promise of useful results. The first lies in the study of the phenomena of the condensation of moisture in the air into raindrops and other forms. The best judgee are of the opinion that in this process lies the secret of such intense storms as tornadoes. . . . The other promising line of research lies in the investigation of the meteorological processes taking place in the free air, especially in the cloud-layer. An investigation of the free air can be carried on by balloons, towers, and kites, and the last (see KITE) in 1896 had developed unexpected capacity for usefulness."

Weav'er, JAMES B., soldier and politician, was born in Dayton, O., June 12, 1833; graduated in law (1854); served in the Union army during the Civil War, becoming a brigadier-general; afterward practiced law in Iowa; filled several offices in that State, and edited the *Iowa Tribune*, at Des Moines; was elected to Congress in 1878; in 1880 was the Greenback candidate for the Presidency; in 1884 he was again elected to Congress, and re-elected in 1886. In 1892 he was again a Presidential candidate, this time on the People's Party ticket, and received 22 electoral votes.

Webb, ALEXANDER STEWART, U. S. A., was born in New York city, Feb. 15, 1835; graduated at West Point (1855); was commissioned in the artillery, and served in Florida; was then made assistant professor of Mathematics at West Point (1857–61); served throughout the Civil War, making a distinguished record and receiving the brevet of major-general, U. S. A. (1865). He was a professor at West Point until 1868; commanded the 5th Military District in 1869; was president of the College of the City of New York, in 1869; resigned from the army in 1870.

Webb, GEORGE JAMES, musician, was born at Salisbury, Wiltshire, Eng., June 24, 1803; removed to the U. S. in 1830, and located in Boston as an organist and a teacher of music. He made a specialty of voice culture; published many collections of popular music in the fashion of that day, among them: *The American Glee Book; Little Songster for Schools; Massachusetts Collection of Psalmody, &c.* Died Oct. 7, 1887.

Webb City, *Missouri*, a city of Jasper co., 9 m. S. W. of Carthage; has extensive zinc and lead deposits, and large mining operations. *Pop.* (1897) 5,500.

Weber (*va'ber*), WILHELM EDUARD, physicist, was born at Wittenberg, Germany, in 1804; died at Göttingen, 1891. In 1825, in connection with his brother, Ernst Heinrich, he published a work on *The Theory of Waves*. He is best known by his researches, made in concert with Prof. Gauss, in terrestrial magnetism. In 1837, for having protested against the violation of the constitution, he was one of seven professors dismissed from the University of Göttingen, but was restored in 1849, after having filled the chair of Physics at the University of Leipsic. He contributed a number of important articles to the scientific journals of Germany, and was the author of several published works.—ERNST HEINRICH, his brother, a physiologist, was born in 1795; his principal work, *De Aure et Auditu Hominis et Animalium* (1820). Died in 1878.—EDUARD FRIEDRICH, another brother, also a distinguished physiologist, was born in 1806; author of several important scientific treatises. Died in 1871.

Web'ster, in *Louisiana*, a N.W. parish; *area*, 609 sq. m.; drained by Bayou Dorcheat. *Surface*, undulating; *soil*, fertile; abounds in valuable timber, iron ore, and coal. *Cap.* Minden. *Pop.* (1897) 14,450.

Webster, in *Mississippi*, a N.E. central co.; *area*, 430 sq. m.; bounded S. by the Big Black river. *Surface*, undulating; *soil*, fertile. *Cap.* Walthall. *Pop.* (1897) 13,180.

Webster, in *Nebraska*, a S. co.; *area*, 576 sq. m.; intersected by Republican river. *Surface*, undulating; timber scarce; *soil*, fertile; good pasturage. *Cap.* Red Cloud. *Pop.* (1897) 14,200.

Webster Groves, in *Missouri*, a post-village of St. Louis co., 10 m. from St. Louis. *Pop.* (1897) 2,500.

Web'-worm, *n.* (*Zoöl.*) Any caterpillar that forms a web about itself is a web-worm, such as the TENT-CATERPILLARS (*q. v.*). In the U. S., however, the term applies specifically to the garden or fall web-worm, the larva of a pyralid moth of the family *Botidæ* named *Hyphantria cunea*. The tawny yellow moths of the year appear as soon as the leaves are fully developed, and fly about in the evening and during the night for six or eight weeks, when all gradually perish; in the Southern States, however, this insect is double-brooded, and the second set of moths linger until autumn is well advanced. Meanwhile they have paired early and the female has deposited her eggs (about 450) in a cluster on a leaf. In favorably warm weather these hatch in 10 days. The caterpillars are pale yellow or greenish, striped and spotted with black and dusky, and are covered with whitish hairs. "As soon as the caterpillars hatch they immediately go to work to spin a small silken web for themselves, which, by their united efforts, soon grows large enough to be noticed upon the trees. Under this protecting shelter they feed in company, at first devouring only the green upper portions of the leaf. . . . As they increase in size they enlarge their web by connecting it with the adjoining leaves and twigs; thus as they gradually work downward their web becomes quite bulky, . . . and an unpleasant feature in our public thoroughfares and parks." When they approach maturity (in about a month) they let themselves down by a silken thread, or perhaps tumble, to the ground, when each one creeps into some crevice of bark or rubbish, or buries itself in the loose earth about the roots of the tree or bush, and wrapping itself in a thin, almost transparent cocoon, proceeds to undergo its metamorphosis into a pupa and development toward a perfect insect. In the case of the first brood of a Southern region this requires about 8 days, when the moth emerges; but in the case of the Southern second brood, or of the Northern single brood, this pupa stage is prolonged into a winter hibernation, and the moth does not appear until the following summer. The injury done by these insects in denuding shade-trees, orchards, and gardens, where they are unchecked, is enormous; and it is the duty of every man to search for and destroy their eggs, and especially to burn or otherwise destroy all their web-nests, as soon as they are formed.

Wed'more, FREDERICK, author, was born at Clifton, England, July 9, 1844; educated at Paris and Lausanne. His earlier literary work was chiefly in the line of novels and short stories, which were well received. He became better known as an art critic; In 1878 and 1880 he published *Studies in English Art*, in two series of papers; *The Masters of Genre Painting* (1880); and *The Four Masters of Etching*. In 1878 he became art critic for the London *Standard*. In 1885 he visited the U. S., and lectured at Harvard and Johns Hopkins Universities; has since published *Balzac*, in the Great Writers Series (1889), and two short stories. In 1893 he edited an edition of M. Michel's *Rembrandt*.

Weed, THURLOW, journalist and politician, was born in Greene co., N. Y., in 1797. After learning the printers' trade and serving in the War of 1812, he edited several newspapers before 1830, when he established the Albany *Evening Journal*, which he edited until 1862, exercising a great influence in the Whig and Republican parties and becoming one of the most skilful political leaders of his day. During the Civil War he was sent on a mission to Europe, and after the war was editor, for a time, of the New York *Commercial Advertiser*, resigning on account of ill health. Besides his editorial writing, he wrote *Letters from Europe and the West Indies* (1866); *Reminiscences* (*Atlantic Monthly*, 1870); and an autobiography, which was finished by his grandson, Thurlow Weed Barnes. Died in 1882.

Weichsel (*vīk'sĕl*) **Wood.** (*Bot.*) A species of wood used in the manufacture of pipestems, brought from the banks of the river Weichsel, Germany.

Weigh'ing-machines', *n. pl.* (*Mech.*) Almost all weighing-machines operate on the principle of the balance or scales, although some are made which utilize the contractive or expansive power of a spring, and measure the same on an indicator or scale. Balances for weighing small articles usually have arms of equal length, the weight being ascertained by placing the article on one end of the scales and weights on the other until an approximation to the exact weight is obtained. For heavier weights the steelyard is commonly employed, having levers so arranged that a small weight on the end of a long lever is made to balance a heavy article hung from a short lever. Platform-scales are but an extension of the steelyard principle, the scale being marked on the long lever, and the platform being balanced on the short lever. In all such machines friction is a source of error, and it becomes necessary to reduce this to a minimum. The balance is therefore obtained on what are known as knife-edges, which are formed of hardened steel, and brought to as narrow a straight edge as the weight supported will admit. Weight may also be measured by the elastic pressure of a fluid, as water. (See TESTING-MACHINE.) The British mint employs a most delicate machine for weighing gold coins and testing them, and separating them into "good," "light," and "heavy" groups. This machine employs an extremely long arm on which to balance the coins, the length of the leverage thus reducing the effect of the friction in the machine. By its use about 23 coins a minute are weighed to within 1-100th of a grain of the exact standard. The automatic weighing-machine of Percival Everett was patented in 1886, and has come into universal use as the slot-machine type of weighing-machine used in railway stations, ferry houses, and other public places. In this machine the weight of the person on the platform is conveyed by levers to a counterpoise, so as to turn a pivoted spindle and a weighted arm, which may be geared to a segment that controls the pointer on the circular scale outside the machine. When the proper coin is placed in the slot the gearing is brought together and the indicator works; but if no coin is introduced, though the weighing process is gone through with, no effect is visible at the indicator.

Wei'mar, in *Texas*, a post-town of Colorado co., 16 m. W. of Columbus. *Pop.* (1897) 1,580.

Weir, HARRISON WILLIAM, artist and writer, was born at Lewes, Eng., May 5, 1824; in early years was articled to a designer on wood, color-printing, and wood-engraving; later devoted himself to artistic painting, in which he was entirely self-taught. He won recognition for his excellent work in water-colors, and even more for his book illustrations and sketches for various periodicals; he also illustrated several books on natural history, and he wrote as well as illustrated other books, including *Animal Stories, Old and New; Bird Stories, Old and New; Our Cats, and All About Them;* the last being his most elaborate work. He was the founder of the Annual Cat Show at the Crystal Palace. He is noted as a judge at shows, as a horticulturist, and a poultry-fancier.

Weir, JOHN FERGUSON, artist, son of Robert Walter Weir, was born at West Point, N. Y., Aug. 28, 1841; trained in art by his father; opened a studio in New York city (1861); was elected an Academician (1866); spent a year in Europe, and (1869) was appointed director of the Yale School of Fine Arts. He was a judge of the fine arts at the Centennial Exposition of 1876. *The Gun Foundry* (1867) and *Forging the Shaft* are the most noted of his pictures.

Weir, JULIAN ALDEN, artist, son of Robert Walter Weir, was born at West Point, N. Y., Aug. 30, 1852; studied with his father and afterward with Gérôme, at Paris.

He became an Academician in 1886; has painted some fine portraits, including one of his father, and one of John Gilbert.

Weir, Robert Walter, painter, was born in New Rochelle, N. Y., June 18, 1803. After studying in New York, he went to Italy (1824), remaining for several years. In 1829 he was elected a member of the National Academy of Design. In 1832 he became instructor in drawing at West Point, holding this position for 42 years. Among his best-known paintings are *The Belle of the Carnival; Landing of Henry Hudson;* and *Embarkation of the Pilgrims*, in the rotunda of the Capitol, at Washington. Died May 1, 1889.

Weir, in *Kansas*, a city of Cherokee co., 4 m. S. E. of Cherokee; has coal mines and zinc smelting works. *Pop.* (1895) 3,020.

Weis'mann, August, biologist, was born at Frankfort-on-the-Main, Jan. 17, 1834; studied medicine at Göttingen, Vienna, and Paris, giving special attention to the natural sciences. In 1861 he became physician to the Archduke Stephen, of Austria. This appointment gave him leisure to attend to his favorite studies, which resulted in the publication of *Development of the Diptera* (1864). He studied zoology at the University of Gelssen (1863), and a few years later became professor at Freiburg. He made original researches, especially on insects, and wrote two books upon the subject, but failing eyesight interfered with this phase of work, and he gave his thoughts to philosophical reflection in regard to the theory of descent and natural selection, writing *Studies in the Theory of Descent* (1880); *Essays on Heredity and Kindred Subjects* (1882–92); *The Germ-Plasm* (1893); and *Germinal Selection* (1896). His works are known to all students of biology, and have been translated into the English language.

Weit'zel, Godfrey, U. S. A., was born in Cincinnati, Ohio, Nov. 1, 1835; graduated at West Point (1855). He was in active service in the engineering department all his life. During the Civil War he was occupied in constructing defences, and also commanded divisions of the army at various points, being commissioned brigadier-general of volunteers in 1862 and major-general in 1864, and at the close of the war receiving the brevet of major-general, U. S. A. After the war he was engaged in important engineering works. Died March 19, 1884.

Welch, William Henry, pathologist, was born at Norfolk, Conn., April 8, 1850; graduated at Yale (1870) and at the College of Physicians and Surgeons in New York (1875). He studied pathology at European universities; became demonstrator of Anatomy and professor of Pathology in Johns Hopkins University, and pathologist in the university hospital. His writings are chiefly contributions to standard works, and consist of chapters on special subjects within the scope of his specialty.

Welles, Gideon, statesman, was born in Glastonbury, Conn., in 1802; studied law; in 1826 he became editor and proprietor of the *Hartford Times*. In 1846–49 he was chief of a bureau in the Navy Department in Washington; was called to the Cabinet as secretary of the navy by President Lincoln (1861), and filled that office with success and credit during the Civil War period. After his retirement from office he published his *Memoirs of the War*. Died Feb. 11, 1878.

Wel'lesley, in *Massachusetts*, a post-town of Norfolk co., 15 m. W. by S. of Boston; seat of Wellesley College. *Pop.* (1895) 7,799.

Wellesley Col'lege. (*Educ.*) A non-sectarian institution for the higher education of women, in the village of Wellesley, Mass., on Lake Waban, about 15 miles from Boston. It was founded in 1875, by Henry F. Durant, of Boston. The main building is 475 feet long, and five stories high. Other buildings are for the School of Music (1881), the Farnsworth School of Art (1889), the Chemistry Building, besides Stone Hall, and 8 cottages for dormitories. In 1896 its income from all sources was $216,470, which included appropriations from the State of Wyoming and the U. S., amounting to the income from nearly $1,000,000. In that year it had 175 instructors and 718 students, with about 47,000 volumes in its library.

Wel'ling, James Clark, educator and editor, was born in Trenton, N. J., July 14, 1825; graduated at Princeton (1844), and studied law. In 1848 he was appointed associate principal of the New York Collegiate Institute. Meanwhile he was a writer for the Washington *National Intelligencer*, of which he later became the editor (1856–65), also being appointed clerk of the U. S. Court of Claims (1862). In 1867 he returned to the profession of teaching, as president of St. John's College, Annapolis, Md.; professor of Belles-Lettres at Princeton (1870), and president of Columbian University, Washington (1871), retaining this position for life. Died Sept. 4, 1894.

Wel'lington, in *Kansas*, a city, cap. of Sumner co., 30 m. S. by W. of Wichita; has large stone quarries; trade center of a fertile agricultural district. *Pop.* (1895) 3,657.

Wells, Clark Henry, U. S. N., was born in Reading, Pa., Sept. 22, 1822; graduated at Annapolis (1846); served during the Mexican War; was with the Atlantic Cable Expedition (1857); served throughout the Civil War, and afterward in the squadron off Brazil, and on the coast of Italy. He received the cross of the Legion of Honor, for rendering assistance to a French ironclad in distress near Spezzia. He was promoted by regular grades, until his retirement as rear-admiral, Sept. 22, 1884. Died Jan. 28, 1888.

Wells, in *Minnesota*, a post-village of Faribault co., 20 m. W. by N. of Albert Lea; has railroad repair shops and some manufactures. *Pop.* (1895) 1,702.

Wells, in *North Dakota*, a central co.; *area*, 1,296 sq. m.; intersected by Sheyenne river and also drained by Kline river and Pipestem creek. *Surface*, slightly rolling prairie; *soil*, deep, rich black loam; lignite; little timber. *Cap.* Fessenden. *Pop.* (1897) 1,450.

Wells'ton, in *Ohio*, a city of Jackson co.; 32 m. S.E. of Chillicothe; has large coal and iron mines. *Pop.* (1897) 4,800.

Welsh, John, merchant and philanthropist, was born in Philadelphia, Pa., Nov. 9, 1805; received a collegiate education, and entered mercantile life. Throughout his career he was an active and public-spirited citizen, filling posts of great responsibility and honor. He was president of the executive committee of the Sanitary Fair during the Civil War, and was president of the board of finance of the Centennial Exposition of 1876. In recognition of his services in this latter enterprise the city of Philadelphia presented him a gold medal and $50,000. This sum he employed to endow the Welsh chair of English Literature in the University of Pennsylvania. He was appointed minister to England in 1878, remaining in the diplomatic service for years. Died April 10, 1886.

Wends (*vĕndz*), *n. pl.* [From the same root as to *wend*, to *wander*, and signifying the wandering or roving border tribes] (*Hist.*) The name given by the Germans to all ranch of the Slavs, which call themselves *Serbe* or *Sorbe*, and as early as the 6th century occupied the north and east of Germany from the Elbe along the coast of the Baltic to the Vistula, and as far south as Bohemia. They were divided into several tribes, which were successively subdued by the Germans, and either extirpated or gradually Germanized and absorbed, although remnants of them are still here and there to be found.—In a narrow sense, the name of *Wend* is given to those remnants of the Slavic population of Lusatia who still speak the Wendic tongue, and preserve their peculiar manners and customs. They are divided into Upper and Lower Lusatians, and number about 150,000. The Wends, like the other subject Slavic tribes, were in early times cruelly oppressed by their German masters; in recent times their lot has been more tolerable.

Werder (*vĕr'dĕr*), August von, a Prussian general, was born in 1808; entered the army in 1825, and in 1842–3, with the permission of his government, served as an engineer officer with the Russian army in the Caucasus. He became, in 1866, lieutenant-general, and participated in the campaign in Bohemia, in the army of Prince Frederick Charles. He highly distinguished himself in the battles of Gitschin and Königsgrätz; and on the outbreak of the Franco-German War (1870) he was attached to the superior command of the Third Army Corps of the Crown Prince of Prussia, and did good service before Strasburg, and also in the battles near Belfort. Died in 1887.

Wes'leyan Univer'sity. (*Educ.*) A Methodist co-educational institution at Middletown, Conn. It is the oldest college in the U. S. under the control of the Methodist Episcopal Church. In 1829 a joint committee, appointed by the New York and New England conferences, issued proposals inviting the towns within a specified region to compete by the offer of subscription for the location of a proposed college. In answer to these proposals, two large stone buildings in the city of Middletown, erected before for the American Literary, Scientific, and Military Academy, but vacated a short time previously by the removal of that institution to Norwich, Vt., were offered to the committee as a gift, on condition that an endowment fund of $40,000 should be raised for the endowment of the college. This offer, accompanied by a subscription of $18,000 from the citizens of Middletown, was immediately accepted. The remainder of the $40,000 was raised, and in 1831 the college was chartered and organized under the name of the Wesleyan University. It has commodious buildings beautifully situated, an observatory with a 12-inch refracting telescope, by Alvan Clark & Sons, well-appointed laboratories and cabinets, and a large modern gymnasium. In 1896, the university had 33 instructors, 306 students, and 46,000 volumes in its library. In the same year its productive funds amounted to $1,128,200 and its revenues to $91,000.

Wes'son, in *Mississippi*, a post-town of Copiah co., 9 m. N. of Brookhaven; a summer resort; has a large cotton and woollen factory. *Pop.* (1897) 3,380.

West, or St River. A river of southern China, emptying into the China Sea through the province of Kwangtung; its main branches rise in Yun-nau and Kweichau, and join in province of Kwangsi. It and its tributaries have recently been declared open to foreign trade, but no ports are open to steamers beyond Wachow, in the province of Kwangsi.

West Bay City, in *Michigan*, a city of Bay co., on W. bank of Saginaw river, opp. Bay City. *Pop.* (1894) 12,337.

West Branch, in *Michigan*, a post-village, cap. of Ogemaw co., on Mich. Central R.R., 66 m. N. of Saginaw; has several important manufacturing interests; in a lumbering district. *Pop.* (1894) 1,223.

West Car'roll, in *Louisiana*, a N.E. parish; *area*, 380 sq. m.; drained by Bayous Boeuf and Macon. *Surface*, generally level; *soil*, fertile. *Cap.* Floyd. *Pop.* (1897) 4,150.

West Cleve'land, in *Ohio*, a suburb of Cleveland, Cuyahoga co.

West Conshohock'en, in *Pennsylvania*, a post-borough of Montgomery co., 3 m. S. of Norristown. *Pop.* (1897) 1,870.

West Duluth', in *Minnesota*, a post-village of St Louis co., 4 m. from Duluth. *Pop.* (1895) 3,368.

West Fair'view, in *Pennsylvania*, a post-village of Cumberland co. *Pop.* (1897) 1,200.

West Lib'erty, in *Iowa*, a city of Muscatine co., 38 m. W. of Davenport, has soap, tile, and carriage works, and farming and dairying interests. *Pop.* (1895) 1,481.

West Nash'ville, in *Tennessee*, a post-village of Davidson co. *Pop.* (1897) 1,250.

West Point, the seat of the United States Military Academy. Pleasantly situated upon a level plateau on the W. bank of the Hudson in the midst of the Highlands, and comparatively isolated from the surrounding country, associated with some of the most stirring events of our national history, and possessed of visible relics of the Revolutionary War, West Point may well be the place consecrated to training the youth of the nation for the military service of their country. The government tract of land at West Point contains about 2,100 acres, most of which was purchased in 1790. The buildings mainly surround a spacious parade, the larger part of which is a fine lawn, while the remainder is devoted to cavalry and artillery drills. The Academy, devoted to recitations, &c., is a handsome Renaissance building of stone, erected in 1896 from designs by the late Richard M. Hunt; next is the old Tudoresque Barracks (dating from 1849) where the cadets (students) have their rooms, and next to that the new gymnasium (by R. M. Hunt, 1893). These, with the chapel (Prot. Episcopal, dating from 1836), containing interesting captured flags, portraits, and tablets, and Library (erected in 1840, and now containing 40,000 vols.), occupy the southern side of the square. The Administration building, or Headquarters, and the Mess Hall (cadets' dining-room, containing many portraits of distinguished officers) are near by on the river road, where also are the hospital and residences of many officers of the teaching-corps. On the east the parade extends to the brink of the cliff-like river-bank, where pleasant walks are laid, and statues to Major Dade and Kosciusko stand. Here was erected in 1897 Cullom Memorial Hall, from bequest by Maj.-Gen. G. W. Cullom, U. S. A., designed to provide for the public meetings and social life of the garrison; it is a stately and beautiful building in neo-Greek style. Beyond it are Battery Knox, overlooking the "point" whence the celebrated chain was stretched across to Constitution Island in 1778, and Fort Clinton; both are restorations of Revolutionary fortifications, and under the trees about the latter the cadets spend the summer encamped in tents and studying tactics. The northern side of the parade overlooks the river far upstream, and is adorned by the splendid Battle Monument (dedicated 1897) erected by U. S. army subscriptions to the officers and men of the regular army who lost their lives in the Civil War. It is a lofty pedestal and column of red granite, designed by McKim, Meade & White, surmounted by a bronze Winged Victory after model of Augustus St. Gaudens. Its cost was $75,000. Near by, on Trophy Point, are assembled a large number of captured cannons, relics of past wars. The "seacoast battery," used for artillery instruction, lies just below; and down at the margin of the river are the ordnance laboratory and similar buildings. The western side of the parade is occupied by the residences of the commandant and higher officers of the post and the Academy, which continues northward along the road leading to the beautiful post cemetery, where many noted soldiers are buried. Statues to Col. Thayer, "the father of the Academy," and to Maj.-Gen. Sedgwick adorn this side of the parade. The wooded and rocky hills to the westward contain the ruins of Fort Putnam and other fortifications of Revolutionary date, and the new astronomical observatory, formerly housed in the present Library building. West Point has been a regular army post since the creation of the United States, and has a full military staff, and a small detail of troops, including a fine permanent band.

The U. S. Military Academy grew up here by force of circumstances, since this post, after the Revolutionary War, was made the principal repository of war material. This fact determined the stationing here of the Corp of Engineers, and made it the headquarters of the artillery arm of the reorganized service. To these corps were early attached a number of junior officers, termed "cadets," for the purpose of learning the art of war; this system was soon changed by Congress into a regular School of Instruction, at first in charge of the artillery, but speedily given an independent place under an academic staff of its own. This has gradually developed into the present institution, and now urgently needs enlargement in various directions. Cadets are admitted between the ages of 17 and 21 years. The authorized number is determined by the law that each congressional district and territory is respectively entitled to have one cadet at the academy, and 10 are also appointed yearly at large. The appointments at large are confirmed by the President; the others by the secretary of war, on the nomination of the representative or delegate in Congress. To secure admission candidates must be well versed in those preparatory studies required at the higher colleges, except that less of the classical and more of the mathematical side of knowledge is insisted upon. The examinations are very rigorous, and a physical examination is also required. The course lasts four years. The departments of instruction are as follows: Natural and experimental philosophy, drawing, mathematics, chemistry, mineralogy and geology, tactics, modern languages, law, civil and military engineering, practical military engineering, ordnance and gunnery, sword

exercise, and music. Several of these are presided over by civilian professors having the "assimilated" rank of lieutenant-colouels, but all the instructors are detailed officers of the army. For tactical purposes the corps of cadets is formed into a battalion of four companies, composed without regard to academic classes, and each commanded by a regular captain; but all the lieutenauts and non-commissioned officers are appointed from the fourth class for academic proficiency, the highest cadet rank and most coveted honor being that of cadet battalion adjutant. Many drills, and all the early instruction of the freshmen, or "plebes," are conducted by these cadet officers, under the eye of the company commanders.

Graduates of the academy become *ipso facto* second lieutenants in the army, in which they are expected to serve at least a year before boing privileged to resign. Those standing at the head of the class may choose their service, and usually enter the Corps of Engineers or artillery; the remainder are assigned to vacancies elsewhere. The academy is annually inspected by a board of visitors appointed by the President, whoso annual reports, and that of the superintendent, should be read by persons interested. The most interesting and valuable general book is Colonel Bailey's *Reminiscences of West Point.*

West Point, in *Mississippi*, a post-town, cap. of Clay co., 16 m. N.W. of Columbus. In a cottou-growing region. *Pop.* (1897) 3,000.

West Ware'ham, in *Massachusetts*, a post-village of Plymouth co., 45 m. S. S. E. of Boston.

West Wheat'field, in *Pennsylvania*, a township of Indiana co.

West'cott, Brooke Foss, Biblical scholar, was horn near Birmingham, England, Jan. 12, 1825; gradnated at Trinity College, Cambridge, snd was ordained in 1851; preacher to the University of Cambridge (1859); canon of Peterborough Cathedral (1869). In March, 1890, he was ordained bishop of Durham. He was one of the compauy for the revision of the authorized version of the New Testament. In collaboration with Dr. Hort, he published (1881) *The New Testament in Greek.* He wrote several critical and historical works on Biblical themes. Died in 1887.

West'ern Reserve'. (*U. S. Hist.*) A part of the pubUc lands in Ohio, comprising 3,667,000 acres, extending 120 m. westward from the Peunsylvania boundary, claimed by Connecticut under her charter of 1662, but relinquished in 1800 to Ohio.

Western Reserve Univer'sity. (*Educ.*) Organized in Cleveland, Ohio, In 1884, by the consolidation of several earlier institutions. It now consists of Adelbert College (founded 1826) at Hudson, which, at the time of its moviug to Cleveland, was given 20 scres of land by the city, and hy Amasa Stone buildings worth $150,000 and an endowment of $450,000. It has a library of about 25,000 volumes. Besides three courses of study, vlz., classical, modern languages, and Latin-English, much attention is given to practical training in chemistry, physics, and biology. For the purposes of this training there are three laboratories. The invested funds amount to $700,000, the real estate and apparatus to $300,000. There are 11 professors, and 5 instructors and lecturers. A gymnasium was sdded to the equipment in 1888. While essentially a Christian institution, the collego is in no sense denominational. (2) The college for women, organized by the university in 1888, and in full operation, with 13 instructors and a course of study on the same grade as Adelbert. It has $172,000 ondowment, with grounds and buildings worth $120,000 more. (3) The college of medicine, formerly the medical department of Adelbert College, and known as the Cleveland Medical Collego. It has 24 instructors, a four-years' graded course, and occupies a building erected for it by John L. Woods, at a cost of ahout $250,000. It has also a permanent fund amounting to $150,000, and operates a dispeusary with $50,000 endowment. (4) The college of dentistry, established in 1892. It has 9 instructors. (5) The college of law, opened in 1892. It has 10 instructors, with the support and coöperation of the Cleveland bar. (6) The graduate department, opened in 1892. It is nnder the direction of the faculties of Adelbert College and the college for women. (7) At Hudson, O., is the Western Reserve Academy, a preparatory and classical school, belonging to Adelbert College. The university had in 1896, in all its departmcnts, 152 instructors and 920 students, with 130,000 volumes in its various libraries. Its total revenues in that year were $310,000.

West'minster (Hugh Lupus Grosvenor), Duke of (the first duke, and third marquis), was born in London, Eng., Oct. 13, 1825; was member of Parliament for Chester (1847–69); succeeded to tho marquisate Oct. 31, 1869; was created a duke in 1874. He is reputed to be the wealthiest nobleman in Europe.

West'minster Abbey. This magnificent and venerable historic pile of London, Eng., stands on the site of a Saxon church huilt in the 7th century, and is snpposed to have received its name of *West Minster* by way of contradistinction to the Cathedral Church of St. Paul's, originally styled the *East Minster* — minster being old Saxon for a church attached to a mouastery. The present structure dates originally from the time of Edward the Confessor, 1055–1065, but of this epoch, the Pyx House, a low chamber, 110 feet long hy 30 feet wide, vaulted and divided by a central range of eight plain pillars with simple capitals, is nearly all that remains. The greater part of the Abbey as it now stands was built in tho reign of Henry III. In 1220 that monarch erected a chapel dedicatod to the Virgin, and in 1225 he demolished the old abbey of the Confessor, and erected the existing choir and transepts, together with the Chapel of King Edward the Confessor, which were consecrated in 1269. The rest of the huilding arrived at completiou under the abbots, the westorn parts of the nave and aisles having been erected between 1340 and 1483. The west front and its great window were constructed by Richard III. and Henry VII. The chapel erected by Henry III. was takeu down in order to replace it by the superb chapel known as *Henry the Seventh's.* The only later additions to the present pile have been the two towers at the north end, the work of Sir Christopher Wren. The entire building is of cruciform shape, with an extreme length, including Henry VII.'s Chapel, of 513 ft.; its width across the transepts is 203 ft. The width of the nave and aisles is 79 ft.; of the choir, 38 ft.; and of Henry the Seventh's Chapel, 70 ft. The altitude of the roof is 102 ft., a height seldom found in English churches. Owing to the immediate vicinage of St. Margaret's Church, the east front of the Abbey and its finest, is not exhibited to the fullest sdvantage, noither is the noblo western front. It is in the interior that the mind of the beholder becomes impressed with an almost boundless admiration. The harmony of its architectural proportions, the lofty and long-drawn aisles with their subdued light and ghostly silence, the superb stained windows — all combine to impress one with unusual feelings of veneration and solemnity. The Abbey is crowded with tombs and historic monuments. Besides being the last resting-place of the monarchs of the Tudor, Stuart, and early Georgian lines, it contains the mausoleums of many of the greatest among English statesmen, warriors, philosophers, poets, artists. To be interred in Westminster Abbey has become the consummation of a life of honor. At the end of the south transept is Poet's Corner, the necropolis of some of the highest names in English literature. Here are the tombs or cenotaphs of Chaucer, Beaumont, Ben Jonson, Shakspeare, Drayton, Cowley, Milton, Dryden, Addison, Prior, Gray, Thomson, Gay, Goldsmith, Dickens, Macaulay, Bulwer-Lytton, Thackeray, Browning, and Tennyson, and other great men. In the north transept are the monuments of Pitt, Fox, Chatham, Canning, Wilberforce, Palmerston. Elsewhere are those erected to the memory of England's great engineers — Watt, Telford, Stephenson, Brunel, &c. Edward the Confessor's Chapel, at the east end of tho choir, contains a shrine erected by Henry III., and the altar-tombs of Henry III., Edward I., Edward III., and Henry V. Tho canopy over that of the third Edward is esteemed one of the finest examples of wood-carving extant, and, indeed, is equal to anything produced by mediæval art. Near the altarpiece of the choir, are placed the two coronation chairs used by the English sovereigns. That of the king encloses the famous Stone of Destiny, on which the Scottish monarchs were crowned for many generations. The other is the queen-consort's chair, first employed at the coronation of Mary, wife of William III., and with him, co-sovereign of the realm. Attached to the Abbey are the Cloisters, the Chapter-house, and the building known as the famous Westminster School, formerly used as the monks' dormitory in the old monastic times. The best and most interesting account of tho subject of this article is that given by Dr. Stanley, the late Dean of Westminster, entitled *Historical Memorials of Westminster Abbey*, published in 1867.

West'on, in *Wyoming*, a N.E. co.; *area*, 4,830 sq. m.; drained by Sheyenne and Belle Fourche rivers, and Beaver creek. Eastern part, Black Hills; central and west, rolling; *soil*, dark-red alluvial; plenty of timber. *Min.* Bituminous coal, gold, and silver. *Cap.* Newcastle. *Pop.* (1897) 3,000.

West'point, in *Nebraska*, a post-village, cap. of Cuming co., 82 m. N. of Omaha. Has excellent water-power and large mills. *Pop.* (1897) 2,500.

West'ward, *adv.* [A. S. *westweard.*] Toward the west; as, "The course of empire *westward* takes its way."

West'wardly, *adv.* In a course or directiou toward the west; as, to sail *westwardly.*

Wey'ler, Valeriano, a Spanish general, was horn about 1836, it is claimed of Irish extraction. During the earliest disturbances in Spain and in the African war against the Moors, he was a favorite lieutenant of the brutal chief, Valmaseda, and gained a reputation for excessive barbarity that might have been attributable to his associations rather than to himself, if it were not that his later independent action has proved the justice of the direct charge. In self-defence he has claimed that rigorous measures in dealing with rebels are necessary, because of the too great leniency of the past. He ignores all questions of reform, and meets war with war. He was captain-general of Catalonia, Spain, when appointed to the charge of Cuban affairs. He arrived in Havana, Feb. 10, 1896. On Feb. 17 he issued three proclamations, establishing the sternest martial law; among other severe messures ordering that "any who invent or circulate news or information directly or indirectly favorable to the rebellion; those who praise the enemy; who in any manner belittle the prestige of Spain or the army," should be subject to trial hy court-martial, and liable to the death penalty, or imprisonment for life. Pursuant to this proclamation and others of equal severity, the policy of *W.* in Cuba was conducted for 18 months, amid the determined opposition of the Cuban patriot army, and the openly expressed disapproval of the civilized world, especially th popular indignation of the American people. Though the action of the U. S. was officially conservative and diplomatic, the informal opinion of citizens was freely expressed by public speeches and through the press. In his management of Spanish affairs in Cuba, *W.* had the support of the home government, under the control of the Conservative party. In Aug., 1897, the prime minister of Spain, Canovas, was assassinated; General Azcarraga was made temporary president of the Spanish cabinet, and was prime minister for one month, resigning with all his cabinet, Sept. 29, 1897. As a result of a conference which the retiring premier and General Polavieja had with the Queen Regent, the latter became convinced that it would be impossible to reunite the Conservatives to form a strong ministry, and she therefore accepted the resignations. These events were coincident with the arrival at Madrid of the newly appointed U. S. minister, General Stuart L. Woodford. As an immediate sequence of the Azcarraga resignation, *W.* was recalled and the captain-generalship of Cuba was given to General Blanco y Arenas, and a new cabinet was formed by Señor Sagasta.

Wey'man, Stanley, novelist, was born at Ludlow, Shropshire, England, Aug. 7, 1855; educated at Shrewsbury, and at Christ Church, Oxford, and in 1878 was classical instructor in King's School, Chester; admitted to the bar (1881), and practiced eight years. He began to write for *Cornhill Magazine* in 1883; his first book, *The House of the Wolf*, was published in 1889. Others issued since are *The New Rector* (1890); *The Story of Francis Cludde* (1891); *A Gentleman of France* (1893); and during 1894 a series of historical romances, *The Man in Black; Under the Red Robe; My Lady Rotha.* In 1895 he published *The Red Cockade* and *Memoirs of a Minister of France.* He ranks as one of the conspicuous writers of current literature.

Whale'back, *n.* (*Naut.*) A form of vessel or barge having the main deck covered and rounded over, for use in rough seas, in the grain-carrying trade, &c.

Whar'ton, Francis, lawyer, was born in Philadelphia, Pa., Mar. 7, 1820; graduated at Yale (1839); was admitted to the Philadelphia bar (1843); became assistant attorney-general (1845). From 1856 to 1863 he was professor of Logic and Rhetoric in Kenyon College, O., and then went abroad. Upon his return he was ordained in the Protestant Episcopal Church, and installed as rector of St. Paul's Church, Brookline, Mass., also filling the professorship of Ecclesiastical and International Law in the Cambridge Divinity School. In 1885 he was appointed by President Cleveland counsel to the State Department in matters of international law; and in 1888 was appointed editor of the Revolutionary diplomatic correspondence of the U. S. He wrote extensively on legal and theological subjects, his opinions being regarded as authoritative, especially his *Treatise on the Criminal Law of the United States* (1846), which is accepted as a standard work. Died Feb. 21, 1889.

Wharton, Thomas, Marquis of, an English statesman, born about 1640, became Lord-Lieutenant of Ireland, 1708, and Lord Privy Seal in 1714. He was the reputed author of the famous ballad of *Lillibullero*, which popularized the Revolution of 1688 among the lower classes. He was the ablest Parliamentary debater, and most consummate political intriguer of his time, a member of the Junto. Died 1715. —His famous son Philip, first Duke of *W.*, was born in 1698. After a career of unsurpassed extravagance and libertinism, he joined the Jacobites, and for serving in the Spanish army at the siege of Gibraltar, in 1727, suffered attainder. Died at Tarragona, 1731.

Whatcheer', in *Iowa*, a city of Keokuk co., 76 m. W. of Muscatine. Coal mining the principal industry. *Pop.* (1895) 2,675.

What'com, in *Washington*, a N. W. co.; *area*, 2,468 sq. m.; bounded W. by the Gulf of Georgia and intersected by Skagit river. *Surface*, partly mountainous and covered with extensive forests. *Cap.* New Whatcom. *Pop.* (1897) 22,000.

Whatcom, or **New Whatcom,** in *Washington*, a city, cap. of Whatcom co., 125 m N. of Seattle; has a saw-mill, sash and door and furniture factories. Hops, coal and lumber are shipped. *Pop.* (1897) 7,500.

Wheat'on, Frank, soldier, was born at Providence, R. I., May 8, 1833; graduated at Brown University as a civil engineer; engaged on government surveys; became first-lieutenant of cavalry (1855); lieutenant-colonel of volunteers (1861); served throughout the Civil War, commanding brigades and divisions at various points; was brevetted from lieutenant-colonel to major-general for gallantry in action; mustered out of the volunteer service, April 30, 1866; appointed major of the 2d Cavalry, U. S. A., Nov. 5, 1863; and through regular grades of promotion became a brigadier-general, April 18, 1892.

Wheat'stone, Sir Charles, physicist, was born at Gloucester, England, in 1802. He is regarded in England as the *scientific* inventor of the electric telegraph; in the United States Professor Samuel B. Morse is accounted its prior discoverer. As professor of Experimental Philosophy in King's College, London, he made several discoveries with respect to telegraphy, determining the velocity of electricity when passing through a metal wire, and originating a method of converting a few wires into a considerable number of circuits. He also invented the stereoscope and the electrical balance known as the Wheatstone's bridge or Wheatstone's balance, which serves to measure electrical resistances, and is the underlying principle of the rheostat; and devised an apparatus for conveying instructions to the engineers and steersmen on board large steamships. In 1868, he received the Copley Medal of the Royal Society for his researches in acoustics, optics, electricity, and magnetism. Died Oct. 20, 1875.

Wheeler, Joseph, soldier, was b. at Augusta, Ga., April 16, 1836, graduated at West Point, 1859, served in

the cavalry, and in 1861 joined the Confederate army, being made colonel of the 19th Alabama infantry. Commanded a brigade at Shiloh; entered the cavalry service in July, 1862, and was made brigadier-general in October and major-general in January, 1863. At Chickamauga he commanded the cavalry, and afterwards cut the Federal line of communication and destroyed a large amount of stores. He actively opposed Sherman's march through Georgia, and was promoted lieutenant-general in February, 1865. After Stuart, he was the most brilliant cavalry leader in the Confederate army. After the war he studied and practiced law, and was a member of Congress from 1885 to 1898, when he was appointed major-general of volunteers in the war with Spain. He commanded the dismounted cavalry in the Santiago campaign, and played a brilliant part in the assault on the Spanish works at San Juan. Elected member of 56th Congress, 1899–1901.

Wheel'er, WILLIAM ALMON, statesman, born June 30, 1819, in Malone, N. Y. Entered the University of Vermont at the age of 19; after 2 years, commenced the study of law; owing to throat disease, he relinquished law in 1851. He successively occupied the positions of town clerk, school-commissioner, district-attorney, State senator (1858–59), and delegate to the constitutional convention of New York (1867), over which he was called to preside. He represented New York in the 37th, 41st, 42d, 43d, and 44th Congresses. In the latter he was chairman of the Committee on Commerce. He opposed the increase of salary and returned his extra pay. He was the author of what is called the Wheeler compromise of the Louisiana difficulties of 1875. In 1876 he was nominated by the Republicans for the Vice-presidency, and being declared elected in 1877 (see ELECTORAL COMMISSION) served until 1881. Died in 1887.

Wheel'er, in *Nebraska*, a N. central co.; *area*, 576 sq. m.; drained by Beaver and Cedar creeks. *Surface*, undulating; *soil*, fertile. *Products*. Wheat, corn, hay, &c. *Cap*. Bartlett. *Pop*. (1897) 1,950.

Wheel'man, *n.* One who steers a vessel; a helmsman.—One who rides a bicycle or tricycle.

Whi'lom, *a.* [A. S. *hwilum*.] (*Poet*.) Once existing, former.

—*adv.* Of old; formerly; erewhile.

Whip'ple, EDWIN PERCY, author and critic, was born at Gloucester, Mass., in 1819; became a bank-clerk in Boston (1837); afterward was in Merchants' Exchange, and superintendent of the reading-room. He wrote reviews and lectures on literature, his favorite beat, becoming a popular orator in Boston. From 1860 he devoted himself to the literary criticisms for which he is widely known. Died June 16, 1886.

Whist'ler, JAMES ABBOTT M'NEIL, artist, was born at Lowell, Mass., in 1834; educated at West Point; studied art in France, and settled in London, where he became noted for his originality of execution, and his interesting experiments in color harmonies. His paintings are nearly all illustrations of these artistic effects in color combination, and are named according to the colors used, as, *Nocturne in Blue and Gold*; *Harmony in Gray and Green*, &c. Although so conspicuous as a colorist, he is even more noted for his etchings. In 1886 he became president of the British Society of Artists. He has published *Four Masters of Etching* (1883); *Ten O'Clock* (1888), and a volume issued in 1890 (and an enlarged edition in 1892), containing *Ten O'Clock* and a miscellaneous collection of short letters and critiques, including his celebrated rejoinder to John Ruskin's criticisms, which brought *W.* into prominence as the first artist who daringly challenged the infallibility of England's great art authority. This brilliant attack and the partisan debate that it aroused in art circles, won for *W.* a hearing, and a final judgment of praise for the real merits of his work, wherein as an exponent of the impressionist school he showed talent of a high order, besides attaining eminence in the special lines before mentioned. Died July 17, 1903.

Whit'aker, OZI WILLIAM, ecclesiastic, was born in New Salem, Mass., May 10, 1830; graduated at Middlebury College (1856); was a teacher for several years; graduated at the General Theological Seminary (1863), and was ordained a priest of the Protestant Episcopal Church, April 7, 1863. In 1868 he was elected Missionary bishop of Nevada; in 1886, assistant-bishop of Penna.; in 1887, upon the death of Bishop Stevens, he became bishop of Pennsylvania.

White, ANDREW DICKSON, educator, was born at Homer, N. Y., Nov. 7, 1832; graduated at Yale; became professor of History and English Literature in the University of Michigan (1857); resigned in 1862; was president of Cornell University (1867–85), contributing during this time $100,000 to the equipment of the university, and supplying 30,000 volumes to the library, which has since been named for him. He has held many distinguished positions, among them that of Minister to Germany (1879–81); Minister to Russia (1892); and Ambassador to Germany (1896). He has published *Lectures on Mediæval and Modern History* (1861); *The New Germany* (1882); *History of the Warfare of Science with Theology* (1896), &c.

White, EDWARD DOUGLAS, jurist, was born in Louisiana, in November, 1845; educated at Mount St. Mary's College, in Maryland; at the Jesuit College, of New Orleans, and at Georgetown College. He was a soldier in the Confederate army; after the war practiced law; was State senator of Louisiana (1874); associate justice of the supreme court of Louisiana (1878); and elected to the U. S. Senate to succeed Senator Eustis, taking his seat March 4, 1891. While still in the Senate he was appointed an associate justice of the supreme court, Feb. 19, 1894.

White, EDWIN, artist, was born in South Hadley, Mass., May 21, 1817; began to paint when a boy; in 1848 was elected an associate of the National Academy, and in 1849 a full Academician. His success was won by his unaided genius, although he studied in Rome, Paris, and Florence. His paintings are chiefly historical, and have been held at a high valuation. Died in 1877.

White, JOHN WILLIAMS, Greek scholar, was born in Cincinnati, Ohio, March 5, 1849; graduated at Ohio Wesleyan University (1868); filled the chair of Greek and Latin at Willoughby College, and at Baldwin University in Ohio (1868–69); was tutor and assistant professor of Greek in Harvard (1874–84), and then elected to the full professorship. He has written textbooks and papers on subjects within his special field, and is one of the editors of Ginn's College Series of Greek authors.

White, PEREGRINE, the first child born in New England of English parents; born in 1620, on the *Mayflower*, in Cape Cod harbor. He received 200 acres of land because of his birth, and filled several important offices. Died in 1704.

White, RICHARD GRANT, author, was born in New York City, in 1821. He studied both law and medicine, but gave little attention to the practice of either, devoting himself to journalism and literature; being connected with the *Courier and Enquirer* of New York (1845–59)—the last five years as editor. He was an accepted critic of music and art. He made stirring contributions to current literature during the Civil War period, publishing *National Hymns* (1861); *The Gospel of Peace* (a satire); and *Poetry of the Civil War* (1866). He was for 30 years a constant contributor to leading magazines, and his literary criticisms were cordially received by a large circle of readers. His favorite literary subject was the plays of Shakespeare. He wrote *Words and their Uses* (1870); *Every-Day English* (1879), &c. From 1861 to 1878 he was chief clerk in the revenue bureau of the New York Custom House. Died Aug. 8, 1885.

White, WILLIAM, born in 1748, was the first bishop of the Protestant Episcopal Church in Pennsylvania; author of *Memoirs of the P. E. Church*, *Views of the Controversy between the Calvinists and Armenians*, *Lecture on the Catechism*, &c. One of the founders of the Protestant Episcopal Church in the United States. Died in 1836.

White Bear Lake, *Minnesota*, a post-village of Ramsey co., 12 m. N. by E. of St. Paul: a summer resort on a lake of the same name. *Pop*. (1895) 1,334.

White Chap'el. A parish of London, Eng., formerly in the county of Middlesex, in the borough of Tower Hamlets. It has a population of over 30,000, and contains the London Hospital and the Tower of London.

White Goat (of British Columbia). See ROCKY MOUNTAIN GOAT-ANTELOPE.

White Lady, The. (*Superstitions*.) In German, English, and Scottish folk-lore the name of a supernatural visitant supposed to be seen at certain times and upon particular occasions. In Germany, under the name of *Bertha*, this apparition was first seen at Rosenberg, in Bohemia, in the 16th century. Since then she is said to have appeared in many of the castles of the German nobility, both by night and by day, and especially just before the death of a member of the family. The White Lady is looked upon as the ancestress of the house, and her appearance in so many noble families has been accounted for by the intermarriages which have taken place with members of the Rosenberg line, in whose train she followed. She dresses in white, wears a chatelaine of keys, and sometimes watches over the children while their nurses sleep. In England, she is still believed by the peasantry to haunt certain ancient castles and manor-houses; and the same belief lingers in the Scottish Highlands, where she was long supposed to be the presiding genius of the fortunes of certain families. Sir Walter Scott, in his *Monastery*, has described such a spectral guardian in the *White Lady of Avenel*. The name *Bertha* or *Berhta* is also that of the great Teutonic goddess of nature, who appears under other names as well, and who is supposed to go her rounds upon Twelfth-Night. Certain dishes eaten in many districts of Germany about the season of Christmas and until after Twelfth-Night, such as fish, oatmeal-gruel, dumplings, &c., are consecrated to *Berhta*, as being the divinity who influences birth and death, and presides over the ordering and fortunes of the household.

White Pass. A pass over the coast range of Alaska, from the head of the Shkagway cañon (see SHKAGWAY) to Summit lake, one of the sources of the Lewes (Yukon) river. (See YUKON.) It is about 3,500 feet in altitude, and was first regularly used in 1897 by travellers to the Yukon gold regions. A wagon-road was built over it in 1898, and a railroad has been planned across it. It lies about 10 m. S. of and nearly parallel to Chilkoot pass.

White River. A river of the Yukon district, Dom. of Canada. It rises in the coast mountains near the head of Altsekh river, and flowing N.W. some 200 m. through a rough country and by a swift, rocky course, enters the Yukon just above the mouth of the Stewart. Limited quantities of fine placer gold have been found along its course.

White'cap, *n.* A wave that shows white foam.

(*Bot*.) A field-mushroom (*Agaricus arvensis*).

(*Zoöl*.) One of several birds.

(*U. S*.) A member of a self-constituted secret committee or body of men, who, under pretense of regulating or promoting public morality in a community, commit outrages upon individuals who have incurred their ill-will; so called from wearing a white hood.

White'hall, in *Michigan*, a post-village of Muskegon co., 16 m. N.N.W. of Muskegon. *Pop*. (1894) 1,741.

Whites'boro, in *Texas*, a post-town of Grayson co., 17 m. W. of Sherman. A shipping-point for cotton, grain and stock. *Pop*. (1897) 1,290.

White'stone, in *New York*, a post-village of Queen's co., on Long Island Sound, 11 m. E.N.E. of Brooklyn. *Pop*. (1897) 3,240.

Whit'ing, in *Indiana*, a post-town of Lake co., 30 m. N.W. of Crown Point. *Pop*. (1897) 1,520.

Whit'man, CHARLES OTIS, naturalist, was born at Woodstock, Me., Dec. 14, 1844; graduated at Bowdoin (1868), studied at Leipsic, and was appointed professor of Zoölogy in the Imperial University of Tokyo, Japan, (1878). He studied in Europe again in 1880, and returning to the U. S. became assistant to Professor Agassiz, at Harvard. In 1889 he took charge of the Zoölogy department of Clark University; in 1892 was called to the chair of Zoölogy in the University of Chicago.

Whitman, MARCUS. Among the interesting events in United States history none are more so than the story of how the Oregon Territory—now the States of Oregon, Washington and Idaho—was won for the great American republic. A vigorous effort was made by the Hudson Bay Fur Company to secure this region for Great Britain, and this country would have very probably lost one of its most important sections but for the alertness, energy, and intrepidity of Dr. Marcus Whitman, born Sept. 4, 1802, at Rushville, N. Y., and who in 1836 emigrated with a party of missionaries to work among the benighted Indians of the upper Columbia. He crossed the plains and mountains with his young wife by wagon, being the first to demonstrate that the Pacific slope could be reached on wheels. Other missionaries followed, and in 1842 many settlers began to reach that country, wagon trains of several hundred crossing the intervening ranges. Meanwhile the Hudson Bay Company had purchased the rights of the Astor Fur Company at Astoria, and was taking energetic steps to settle the country with emigrants from the Red River country and secure it for the British crown. This plan becoming evident to Dr. Whitman, he determined to forestall it. The Ashburton-Webster treaty was then before Congress, and was expected to cover the Oregon question. It was important that Congress should be advised of the true state of affairs, and he determined to cross the mountains on horseback and endeavor to save this rich region for the United States. With but a single companion, the intrepid pioneer made a winter journey of 3,000 miles, braving the cold and snows of the Rocky Mountains, enduring the severest suffering, and running imminent risk of perishing. Fearing treachery on the part of the English, he turned from the direct route and took the "old Indian trail" southerly to Santa Fé, a thousand miles out of his way. The hardships, perils, and narrow escapes of his journey have seldom been exceeded. Starting in October, he reached Washington on the 3d of March, 1843, only to find that the treaty had been signed. Fortunately the Oregon question had not been included. Dr. Whitman at once went energetically to work, taught the government the value of the land it had deemed worthless, spread far and wide the story of the fertility of Oregon and the fact that it could be reached by wagon, and arrived home again in September at the head of a train of 200 wagons and about 1,000 emigrants. Others rapidly followed, a provisional government was organized, and all question as to the ownership of Oregon was at an end. Dr. Whitman had won this western empire for the U. S., and the results of his work were secured by the treaty of 1846. He died the following year (1847), being, with his wife and some others, massacred by the Cayuse Indians.

Whitman, WALT, poet, was born at West Hills, Long Island, May 31, 1819. His father was a carpenter, and in early life Walt sometimes followed that trade, sometimes set type, and sometimes wrote for the papers or acted as editor, doing anything that came in his way or nothing at all, with the same genial delight in the process of living which is expressed so constantly in all that he wrote. In 1862 he volunteered as an army nurse and served through the war. He had the power of giving himself unreservedly to the interest at hand, and at the close of the war, after having nursed, it is said, 100,000 Union and Confederate soldiers, he was greatly broken in health, partly from hospital malaria and partly from the strain of constantly giving out sympathy, courage, and incentive, for so long a time. He accepted a government clerkship in Washington, where he remained until 1873, when he was disabled by paralysis. After that time he lived in Camden, N. J., keeping the characteristic breadth and freedom of his thought in spite of ill health and a poverty which sometimes amounted to need. His first publication was a thin edition of *Leaves of Grass*, in 1855. From that time until his death he kept adding to, revising, and bringing out new editions of this volume, until the last edition (1892) fairly represents his life-work. When it first appeared it met with little except censure in the U. S., though much more appreciated in England, for he had chosen the whole cycle of nature as his theme, taking the ground that nothing which had been created was unpoetic or unholy. His style was as unusual as his subject, for he disregarded all accepted poetic forms and wrote in a strange, irregular, recitative, sometimes clumsy, awkward, and simply enumerative, sometimes rising to the rhythmic beauty of the psalms, which his poems in some ways resemble, or of the grander sounds of nature. He met with so much criticism that in 1866 William Douglas O'Connor

William Wilberforce

1759–1833

published *The Good Gray Poet: a Vindication*, which helped the public to a better understanding of his purpose, and at the same time gave, in its title, an affectionate description of him by which he was afterward known. In 1868, W. M. Rossetti published an edition of *W.*'s poems, in England; it was met with a favor which was somewhat reflected in America, where he began to have many warm admirers. Besides *Leaves of Grass*, he published *Drum Taps* (1865); *Democratic Vistas* (1871); *Memoranda During the War* (1875); *Two Rivulets* (1876); *Specimen Days and Collect* (1883); *November Boughs* (1888); *Good-bye, My Fancy* (1891); and *Selected Poems*. Died March 26, 1892.

Whit'man, in *Massachusetts*, a post-town of Plymouth co., 21 m. S. of Boston; manufactures shoes, tacks, and eyelets.

Whitman, in *Washington*, a S.E. co.; *area*, 2,124 sq. m., bounded S. by Snake river and also drained by the Palouse river. *Surface*, partly mountainous, partly broad plains; *soil*, fertile. *Cap.* Colfax. *Pop.* (1897) 22,200.

Whit'ney, Adeline Dutton Train, author, was born at Boston, Mass., Sept. 15, 1824, a sister of George Francis Train (*q.v.*); in 1843 she was married to Seth D. Whitney, of Milton, Mass., where she has since resided. She has written regularly for juvenile magazines, and has published a large number of novels, many of them in series.

Whitney, Josiah Dwight, geologist, was born in Northampton, Mass., in 1819; graduated at Yale and spent five years in scientific studies in Europe. Returning, he was occupied in geological surveys throughout the U. S. In 1865 was made professor of Geology in Harvard University. His many published books relate to geology, and most of them are of the nature of reports of his several surveys.

Whitney, William Collins, lawyer, was born at Conway, Mass., July 5, 1841; graduated at Yale (1863), and at Harvard Law School (1864), beginning the practice of law in New York city (1865). He was corporation counsel of New York city (1875–76, 1880–82). In March, 1885, he was appointed Secretary of the navy by President Cleveland; filled this office until March 4, 1889, when he engaged in the practice of law in New York city. Died February 2, 1904.

Whitney, William Dwight, philologist, brother of Josiah D. Whitney, was born at Northampton, Mass., in 1827; became clerk in a banking house, devoting his leisure to language studies, especially Sanskrit. He went to Germany and continued his studies at Tübingen and Berlin (1850–53); in 1854 was made professor of Sanskrit in Yale, and also professor of Comparative Philology. He published several valuable text-books in Sanskrit, and in German. He was the editor-in-chief of the *Century Dictionary*. Died June 7, 1894.

Whymp'er, Edward, wood-engraver and traveller, born in London, 1840; has acquired great celebrity by his mountaineering exploits, particularly that of ascending the Pointe des Ecrins, the loftiest peak of the French Alps, in 1864. In 1865 he gained the summit of the Matterhorn, which no one else had ever reached. In 1867 he explored N.W. Greenland, and demonstrated the former existence of luxuriant vegetation in those high northern latitudes. The fossil plants he collected on this occasion are now in the British Museum. He wrote *Scrambles amongst the Alps in the Years 1860–69*, &c. In 1874–75 he was engaged in exploring Greenland, and in 1880–2 visited America, ascending many mountains in the Ecuadorian Andes. In 1892 he wrote *Travels among the Great Andes of the Equator*.

Wich'ita, in *Kansas*, a W. co.; *area*, 720 sq. m.; drained by affluents of the Smoky Hill river. *Cap.* Leoti. *Pop.* (1895) 1,438.

—A city, cap. of Sedgwick co., 160 m. S.W. of Topeka; has plow works, a watch factory, extensive car works, several large pork-packing establishments, numerous brick yards, and a large lumber business. *Pop.* (1895) 20,051.

Wichita, in *Texas*, a N. co.; *area*, 600 sq. m. It is bounded on the N. by the Red river. *Surface*, undulating; *soil*, very fertile. *Cap.* Wichita Falls. *Pop.* (1890) 4,881.

Wichita Falls, in *Texas*, a post-town, cap. of Wichita co., on the Wichita Valley R.R., 114 m. N.W. of Fort Worth. *Pop.* (1897) 2,150.

Wieck, Frederick, pianoforte teacher, was born at Pretsch, Saxony, Aug. 18, 1785. He taught the piano on a system of his own, and was eminently successful. His method is explained in the brief work, *Clavier und Gesang* (1875). He also published some creditable piano studies.—His daughter, Clara Josephine (Schumann), was one of the best exponents of his teaching, and married another one of his famous pupils, Robert Schumann.

Wil'barger, in *Texas*, a N. co.; *area*, 940 sq. m.; bounded N. E. by Red river. *Surface*, chiefly high prairie, well watered and easily cultivated, well adapted to the raising of small grain. *Cap.* Vernon. *Pop.* (1897) 8,000.

Wil'ber, in *Nebraska*, a post-village, cap. of Saline co., 31 m. S. by W. of Lincoln; has several elevators and flour mills; corn and wheat are largely shipped. *Pop.* (1897) 1,485.

Wil'berforce, Albert Basil Orme, clergyman, was born in England; educated at Exeter College, Oxford; has filled various clerical offices, becoming rector of St. Margaret's, Southampton (1871–94). In 1894 he was appointed a canon of Westminster, and presented to the living of St. John's Church. He became famous as a temperance advocate in his early days, and in later years has been distinguished for his pulpit eloquence.

Wil'berforce, Ernest Roland, clergyman, was born on the Isle of Wight, Jan. 22, 1840; educated at Harrow and Exeter College, Oxford. In 1878 he was nominated to a canonry in Winchester Cathedral. He was subalmoner to the Queen (1871–82), when he was appointed first bishop of the see of Newcastle-on-Tyne.

Wilberforce, Samuel, an eminent English prelate and theologian, was born in 1805, third son of the celebrated philanthropist, William Wilberforce; graduated at Oxford in 1826, and took holy orders. In 1844 he became bishop of Oxford and Lord High Almoner of England, and in 1868 bishop of Winchester and prelate of the Order of the Garter. He was involved in the innumerable theological contests arising from the "Oxford movement," in which, during a revival of religious fervor, so many devout and earnest Church of England prelates went over to the Church of Rome. He himself, although a zealous High-churchman, claimed to represent the old Church of England, which opposed both Puritanism and Roman Catholic superstition. He was noted for his great administrative ability, for his tireless energy, for his versatile social charm, but particularly for his brilliant oratory. His persuasiveness and fertility in expedients earned him the sobriquet of *Soapy Sam*, but he explained it truthfully by saying that although he was always in hot water, he always came out with his hands clean. He wrote: *Note Book of a Country Clergyman* (1832); *Agathos* (1839); *History of the Protestant Episcopal Church in America* (1844); and, with his brother, a life of his father, in 1838. He was killed by a fall from his horse in 1873.

Wilberforce, William, the philanthropist to whose efforts was due the abolition of the African slave trade in British territory, was born at Hull, England, Aug. 24, 1759, and when but 16 years of age published a newspaper article "in condemnation of the odious traffic in human flesh." He was educated at St. John's College, Cambridge, where he began an acquaintance with William Pitt, which afterward grew into intimacy. In 1780 he offered himself at Hull as a candidate for Parliament, and was elected after a sharp contest. In 1784 he was elected to represent York, and in the following years experienced a marked change in his religious convictions, which changed his whole views of life and its duties. This was followed, in 1787, by a series of efforts for social reform and for the abolition of the African slave-trade. After many obstacles, this subject was brought before Parliament in 1789, he opening with a speech of great beauty and power, while he was supported in his efforts by Burke, Pitt, and Fox. Defeated then and later, he persisted in his efforts, and finally in 1807, after nearly 20 years of struggle, he had the joy of having a bill passed making it illegal for any British citizen to engage in the slave trade. It was signed by the King and became law March 25, 1807. He retired from Parliament in 1825, after nearly 46 years' service, in which he had worked earnestly for every measure for the betterment of mankind. He afterward lived in retirement, and three days before his death (July 29, 1833) had the intense satisfaction of learning that Parliament had passed to second reading a bill for the abolition of slavery. He was buried in Westminster Abbey, close by Pitt, Canning, Fox, and Grattan. He published in 1797 a book entitled, *A Practical View of the Prevailing Religious System of Professed Christians in the Higher and Middle Classes of This Country, Contrasted with Real Christianity*. His *Life* and his *Correspondence* were afterward published by his sons Robert and Samuel.

Wil'cox, Ella (Wheeler), poet, was born at Johnstown Center, Wis., about 1845; was educated at the University of Wisconsin; was married in 1884 to Robert M. Wilcox, and has resided in New York city since 1887. She became known as a writer of short poems for various newspapers, and has published several collections of verse and two novels. Her first reputation was made on her *Poems of Passion* (1883).

Wilcox, in *Pennsylvania*, a post-village of Elk co. *Pop.* (1897) 1,120.

Wi'ley, Harvey Washington, chemist, was born at Kent, Ind., Oct. 18, 1844; educated at Hanover College and at the Indiana Medical College; also studied chemistry at the University of Berlin (1878). He has filled many college professorships and official positions under the government, and is a distinguished member of many scientific societies; has published the results of his researches in the form of valuable papers contributed to scientific journals.

Wil'helm, Karl, musical composer, was born at Schnalkald, Prussia, Sept. 5, 1815; taught music in Coefeld, and was director of the Liedertafel there (1840–65). He became famous through his music for the *Watch on the Rhine*, composed in 1854; during the Franco-Prussian War this song became the battle-cry of the German army, and the composer received, in 1871, a pension of $750. Died Aug. 26, 1875.

Wilhelmi'na, Helen Pauline Marie, Queen of the Netherlands, was born at the Hague, Aug. 31, 1880. She succeeded to the throne on the death of her father, King William III., November 23, 1890. Her mother, Queen Emma, acted as regent during the minority of the young queen. Wilhelmina was crowned Sept. 6, 1898, and on Feb. 7, 1901, was married to Prince Henry of Mecklenburg-Schwerin. The lack of children from this marriage has caused apprehension in the Netherlands, as the failure of a direct heir to the throne might yield political peril.

Wil'helmshaven, or **Wil'helmshafen,** a strongly fortified seaport, the principal Prussian naval station on the North Sea. It is situated on the Jahde Bay and surrounded by Oldenburg, from which the ground on which it stands was bought by Prussia in 1864. Though naturally swampy, the place has been built up at great expense into a modern fortress of the first rank, defended by a torpedo system and by forts, and provided with dry docks, basins, naval stores, and work-shops. *Pop.* (1897) 16,150.

Wil'kin, in *Minnesota*, a W. co.; *area*, 725 sq. m.; bounded W. by the Red River of the North. *Surface*, level; scarcely any timber; *soil*, fertile. *Cap.* Breckinridge. *Pop.* (1895) 6,400.

Wil'kins, Mary Eleanor, writer, was born in 1865, in Mass.; educated at Brattleboro, and at Mt. Holyoke Seminary. She is well known as a successful writer of short stories and sketches, and a constant contributor to current magazines. She has published several volumes: *A New England Nun, and Other Stories* (1891); *The Pot of Gold* (a juvenile book, 1892); *Jane Field* (1895); *Pembroke* (1894); *Madelon* (1896), &c.

Willamette' Univer'sity. (*Educ.*) A Methodist Episcopal co-educational institution, founded in 1844 at Salem, the capital of the State of Oregon and one of the handsomest cities on the Pacific coast. The university has a much larger number of pupils than any other collegiate institution in the State, having, in 1896, 737 students, with 52 instructors. Its library is one of the largest collections of books in the State, containing about 7,000 volumes, exceeded by that of Pacific University alone, which numbers about 7,500 volumes. Its annual revenue is surpassed by that of the University of Oregon only, which derives its income from taxation.

Wil'lard, Emma C., educator, was born at Berlin, Conn., Feb. 23, 1787; educated in Berlin and Hartford. She began to teach when 16 years of age, and continued uninterruptedly, taking charge of various academies, until 1809, when she was married to Dr. John Willard, of Middlebury, Vt. She opened a school for girls in Middlebury (1814) and later a seminary at Waterford, N. Y., which was moved to Troy in 1821, where it became known as Troy Female Seminary. This institution enjoyed a very high reputation in its day as the most advanced school for girls, and many of its pupils were afterward distinguished as teachers. Mrs. *W.* resigned the management of this school to her son, John Hart Willard, in 1838. She published several books on history, and a *Journal and Letters from France and Great Britain* (1833); and a volume of poems, containing her most popular song, *Rocked in the Cradle of the Deep*. Died April 15, 1870.

Willard, Frances Elizabeth, a leading reformer, was born in Churchville, near Rochester, N. Y., Sept. 28, 1839; graduated at the Northwestern Female College (1858). She taught for the next 12 years, becoming professor of Esthetics in the Northwestern University, and president of the Woman's College (1871); was corresponding secretary of the National Woman's Christian Temperance Union (1874); president of the Woman's Christian Temperance Union of Illinois (1878); president of the National Woman's Christian Temperance Union from 1879 onward; was one of the organizers of the Prohibition party (1884); editor of the Chicago *Post* (1879); of the *Union Signal*, the official organ of the National Woman's Christian Temperance Union. She organized the World's Woman's Christian Temperance Union (1883), and was made its president at the first convention (1891); she also originated the idea of the Polyglot Petition against the manufacture and importation of alcohol and opium. This petition, addressed to the governments of the world, and signed by 7,000,000 persons, was presented to Queen Victoria and to the President of the U. S. In 1889 Miss *W.* was president of the Woman's Council in the U. S. She has published several books, among them *Glimpses of Fifty Years* (1889); *How to Win* (1888); *A Great Mother* (1893), &c. She received the degree of A.M. from Syracuse University, and that of LL.D. from Ohio Wesleyan University in 1893. Died Feb. 17, 1898.

Wil'liam and Ma'ry, Col'lege of. (*Educ.*) This non-sectarian college, at Williamsburg, in southeastern Virginia, claims to be the oldest institution of learning in the U. S., affirming that it is the lineal descendant of a school dating back to 1617. It is certain, at any rate, that it is the second oldest college in the country, its charter having been approved by King William and Queen Mary in 1693, and Harvard having been founded a few years before. King William aided in the original endowment. The first building was designed by Sir Christopher Wren, but was burned in 1705. The first president was the Rev. Dr. James Blair, who secured the charter from the English crown. At his death, in 1743, the college was highly prosperous. When the War of the Revolution broke out, it was the wealthiest college in America. That war, however, deprived it of all its endowments, save 20,000 acres of land, by the sales of which a new moneyed endowment of $200,000 was obtained. The Civil War stripped it of about everything it had, several of its buildings, as well as its library and apparatus, being destroyed. In 1869 the main building was restored and the college reopened, but in 1882 financial embarrassment made it necessary to close its doors. Liberal gifts from wealthy persons in the Northern States and England, with a yearly appropriation by the General Assembly of Virginia, enabled the institution to open once more in Oct., 1888, and it has since had fair success. In 1893 Congress voted it $64,000 as indemnity for losses sustained during the Civil War. Among its distinguished alumni have been Thomas Jefferson, James Monroe; and John Tyler, Presidents of the U. S.; Benjamin Harrison, Carter Braxton, Thomas Nelson, and George Wythe, who, with Jefferson, were signers of the Declaration; Edmund Randolph, the first attorney-general of the U. S.; John Marshall and Bushrod

Washington, jurists; and Lieut.-Gen. Winfield Scott. George Washington was chancellor of the college (1788–99). The Phi-Beta-Kappa Society was founded at William and Mary in 1776. Its classes number little over 200, and its endowment is small, amounting to $154,000 in 1907.

Wil'liam II., ninth King of Prussia and third Emperor of Germany, was born at Berlin, Jan. 27, 1859, son of the Crown-Prince (afterward Emperor) Frederick and Princess Victoria of England. After a careful training at home, his education was completed in the gymnasium at Cassel; and he also received a thorough military training and full instruction in the arts of government and administration. An accident at his birth caused a permanent weakening of his left arm, yet despite this he became a skilful horseman and an untiring hunter, as well as an enthusiastic yachtsman. In addition to the weakness of his arm, he has a serious affection of the ear, which hitherto has defied treatment. Yet, though thus affected, he has, since his accession to the throne on the death of his father, June 15, 1888, shown an indefatigable and exuberant energy, and has made himself felt as a vigorous power in home and general European affairs. The speeches with which he began his reign showed an exaggerated idea of the imperial dignity, and the energy with which he pushed forward the organization of the army and navy seemed significant of warlike purposes, though his later career has gone far to quiet the apprehensions to which his early actions and expressions gave rise. His independence of action soon led to strained relations with Prince Bismarck, who had continued in office as premier, but who found his authority in governmental affairs greatly diminished by the initiative of the strong-willed young Emperor. A break came when William established a system of partial state-socialism, of which Bismarck strongly disapproved. The result was the resignation of the able chancellor, and his replacement by Count Caprivi, a premier more in accord with the Emperor's views, or less wedded to his own. The foreign policy of the new regime has been to strengthen the triple alliance between Germany, Austria, and Italy, to weaken the older bond between Germany and Russia, and to extend the colonial possessions of the empire, which gained a large territory in Africa in the portion of that continent among the European powers. The island of Heligoland was ceded by England to Germany (1890) in return for advantages granted England in Africa. In the arrangement of the treaty of peace between Greece and Turkey, at the end of the 1897 war, the German Emperor took the most prominent part, insisting that provision for payment of the defaulted interest to foreign bondholders of the Grecian debt (mainly German) should form part of the settlement. The treaty was made in accordance with his views. In his internal administration William has actively sought to establish a more pronounced personal government. He has taken steps to placate the workingmen by establishing a system of old-age insurance, under State auspices, and other legislation in their favor; but has vigorously, though not successfully, sought to repress the socialism so widely spread among the German people. One of his favorite measures, a religious educational bill, he was obliged to withdraw on account of the opposition it excited. His plans for an increase of the army and navy, with the necessary additional taxation, have more than once brought him into conflict with the Reichstag, and in December, 1906, when that body opposed his views for maintaining a large garrison in the colony of German Southwest Africa, he ordered its dissolution and a new election. The action of the Reichstag was partly to sustain its own prerogatives against the autocratic will of the emperor, against which a strong opposition had developed. William has shown himself one of the ablest and most energetic of ruling monarchs, and one ready to maintain the political and commercial interests of Germany to the verge of war, as shown by his conflict with France in 1905 on the Morocco question, in which war seemed imminent. In 1881 he married Princess Victoria of Schleswig-Holstein, and has a family of six sons and one daughter. The crown-prince, Frederick William, was born in 1882.

Williams, Ephraim, soldier, was born at Newtou, Mass., Feb. 24, 1715. He served in wars against the French in 1740 and 1755, being killed in battle in the latter year. He left his estate to found a "Free School" at Williams Town. This is now Williams College.

Williams, George, founder of the Young Men's Christian Association, was born at Dulverton, Somersetshire, England, Oct. 11, 1821. He went to London (1841) as junior assistant with Hitchcock & Rogers. He first gathered together the young men employed in that establishment, and with 12 of them organized a band (June 12, 1844), to be called the "Young Men's Christian Association," and which was designed to be "a society for improving the spiritual condition of young men engaged in the drapery and other trades." He was the first treasurer of the Y. M. C. A., and always devoted to its interests. He was knighted in 1894.

Williams, George Henry, jurist, was born at New Lebanon, N. Y., March 23, 1823; began the practice of law in Iowa (1844); judge of the first judicial district of Iowa (1847–52); chief justice of Oregon Territory (1853–57); member of the convention that framed the Constitution of Oregon (1857); U. S. senator from Oregon (1865–71); member of the commission that framed the Treaty of Washington relative to the Alabama claims (1871); attorney-general under President Grant (1872–75); and afterward practiced law in Washington, D. C.

Wil'liams, in *North Dakota*, a N.W. co.; *area*, 3,420 sq. m.; bounded S. by Missouri river. Grazing and farming are the chief industries. *Cap.* Williston. *Pop.* (1897) 990.

Williams College. (*Educ.*) An educational institution founded by Ephraim Williams (*q. v.*), who left all his property to found a "Free School" at Williams Town, where land had been granted him by the Massachusetts government in 1750. The school was founded on his bequest, and in 1793 was chartered as Williams College. It was a poor and feeble institution until the presidency of Mark Hopkins (1836–72). He was a graduate of the college, and connected with it altogether for sixty years. While he was at the head of the institution, the college grounds were greatly extended, several buildings erected, its corps of instructors enlarged, and an endowment amounting to nearly $300,000 secured. From that time it has prospered. The first foreign missionary society in the U. S. was formed in 1806 by five of its students, while taking refuge under a haystack during a thunder storm. At Williams, in 1836, Prof. Hopkins (not the president) erected the first astronomical and magnetic observatory in North America, and here was organized the first college scientific expedition. Williams is a non-sectarian institution, and in 1906 had 46 instructors and 448 students, with 55,000 volumes, many paintings and art objects in its library. In that year its endowment funds and securities amounted to more than $1,200,000; its buildings and other property were valued at nearly a million more, and its income from all sources was in excess of $140,000.

Wil'liamstown, in *Pennsylvania*, a post-borough of Dauphin co., 5 m. from Lykens. *Pop.* (1897) 2,440.

Will'mar, in *Minnesota*, a post-village, cap. of Kandiyobi co., 104 m. W. of St. Paul; has railroad machine-shops. *Pop.* (1895) 2,511.

Wil'loughby, in *Ohio*, a post-village of Lake co., 18 m. N.E. of Cleveland. *Pop.* (1897) 1,325.

Will'low, in *California*, a post-town, cap. of Glenn co., about 45 m. N.W. of Marysville. *Pop.* (1897) 1,295.

Wills Point, in *Texas*, a post-town of Van Zandt co., 47 m. E. of Dallas. Cotton, grain, hay, fruit, and live stock are shipped. *Pop.* (1897) 1,410.

Will'y-nil'ly, *adv.* [Perhaps originally *will he* (or) *nill he.*] Willingly or unwillingly, whether (one) will or not; as, he must obey, *willy-nilly*. Occasionally used as an *adjective*, in the sense of undecided, uncertain.

Wilmette', in *Illinois*, a post-village of Cook co. *Pop.* (1897) 1,510.

Wil'mot, David, jurist, was born in Bethany, Pa., Jan. 10, 1814; admitted to the bar (1834); member of Congress (1845–51), in 1846 proposing the celebrated "Wilmot proviso;" was presiding judge of the 13th District of Pennsylvania (1853–61); U. S. senator (1861–63), and Judge of the U. S. Court of Claims in 1863. Died March 16, 1868.

Wil'son, Augusta Jane Evans, novelist, was born in Columbus, Ga., May 8, 1835. She is known as the author of the very popular novels, *Beulah* (1859); *St. Elmo* (1866); *At the Mercy of Tiberius* (1887), &c.

Wilson, James, statesman, was born in Ayrshire, Scotland, in August, 1835; son of a farmer, who removed to the U. S. in 1851 and settled in Iowa, where the son received a common-school and academic education. Entering politics, *W.* was elected to the Iowa legislature (1867-73), being Speaker the last two years of his term; member of the 43d, 44th and 48th Congresses, in the latter retaining his seat, which was contested, until the last day of the session. In 1897 he became secretary of agriculture in President McKinley's cabinet, and in 1901 in President Roosevelt's.

Wilson, James F., statesman, was born at Newark, O., Oct. 19, 1828; admitted to the bar (1851); entered politics and filled various State offices in Iowa; was member of Congress from Iowa (1861-69), serving six years as chairman of the Judiciary Committee; U. S. senator (1883-95); declined re-election the latter year. Died April 22, 1895.

Wilson, in *Texas*, a S. central co.; *area*, 940 sq. m.; intersected by San Antonio River. *Surface*, somewhat hilly; *soil*, fertile. *Cap.* Floresville. *Pop.* (1897) 12,150.

Wil'ton Junc'tion, in *Iowa*, a post-town of Muscatine co., 12 m. N. of Muscatine; has some manufactures. *Pop.* (1895) 1,268.

Win'chester, in *Tennessee*, a post-town, cap. of Franklin co., 70 m. W. by N. of Chattanooga; seat of Mary Sharp and the Winchester Normal Colleges. *Pop.* (1897) 1,460.

Wind, *n.* (*Meteorol.*) Air in motion, especially a current of air produced by natural causes, and of some extent, or distinctive as coming from some direction, with a certain degree of permanence. Variation in temperature is the principal cause of winds, the air tending to rise from the surface at heated points, and being drawn in from surrounding cooler places to balance the tendency to a vacuum caused by such rising. S. P. Langley has made a special study of the internal work of the wind, developing the fact that its action is far less constant than was previously supposed, and that during a wind of, say, a certain mean speed, there were very short but frequent pauses, when the speed might fall one-half in a given small area, showing that the wind is made up of an ever-changing, whirling, irregular mass of molecules, apparently as the effect of numerous causes, as surface irregularities of the earth. (See Anemometer.) The wind has also received much study from other investigators interested in the navigation of the air, kite-flying, &c. The present efforts of the U. S. Weather Bureau to obtain records of the condition of the atmosphere at higher strata is sure to increase knowledge as to the wind. The trade-winds and anti-trade-winds are classified as constant, being especially regular on the ocean at the tropics. (See Trade-winds.) The monsoon, simoom, and sirocco (*q. v.*), and land and sea-breezes are classified as periodic, depending upon the difference in temperature of the land and adjacent sea during the day and night. Cyclonic winds are treated at Cyclone. (See also Whirlwind and Tornado.) In mean latitudes the direction of the winds is very variable; toward the poles this irregularity increases, and under the arctic zone the winds frequently blow from several points of the horizon at once. On the other hand, in approaching the torrid zone, they become more regular. The southwest wind prevails in the north of France, in England, and in Germany; in the south of France the direction inclines toward the north, and in Spain and Italy the north wind predominates. In the United States the prevailing winds are from the west. In storms, wind has a tendency to rotary motion, and Dové has demonstrated that there is also a tendency to follow the sun's motion—that is, to pass from north through northeast, east, southeast to south, and so on round in the same direction from west to north.

Wind'flower, *n.* See Anemone.

Win'dom, William, statesman, was born at Waterford, Ohio, May 10, 1827; admitted to the bar of Ohio (1850); removed to Minnesota; was a member of Congress from that State (1858–68); U. S. senator (1870–81); secretary of the treasury (1881); again senator (1881–83); and secretary of the treasury from 1889 until his death, Jan. 29, 1891.

Windom, in *Minnesota*, a post-village, cap. of Cottonwood co., 60 m. W. of Mankato. *Pop.* (1895) 1,523.

Wind'sor, in *Missouri*, a city of Henry co., 21 m. S.W. of Sedalia; has coal. *Pop.* (1897) 1,615.

Windsor Locks, in *Connecticut*, a post-town of Hartford co.; has manufactures of paper, silk, steel, cotton-warp, hosiery, rubber rolls, machinery, school apparatus, &c. *Pop.* (1897) 2,890.

Wines, Enoch Cobb, clergyman, educator and reformer, was born in New Jersey, in 1806; graduated from Middlebury College, Vt. (1827); studied theology; became alternately a preacher and teacher; had charge of Edge Hill School, Princeton, N. J., and of a boarding school at Burlington, N. J.; was professor of Languages in the Central High School, Philadelphia; pastor of churches at Coruwall, Vt. (Cong.), and at East Hampton, Long Island (Pres.); professor of Ancient Languages in Washington College, Pa., and president of the University of St. Louis, Mo. He is best known, however, by his work in connection with prisons and prison-reform, to which he devoted the closing years of a remarkably busy life. He became secretary of the New York Prison Association (1862), of the National Prison Association (1870); visited prisons in Europe under instructions from the U. S. government; was instrumental in convening the First International Prison Congress, London, July 4, 1872, in which 26 governments were represented; became chairman of the World's Prison Commission, which met several times in Europe. He wrote *Commentaries on the Laws of the Ancient Hebrews*, and books and numerous articles on the state of prisons and reform in penal institutions. Died Dec. 10, 1879.

Wink'ler, in *Texas*, a W. co.; *area*, 800 sq. m. Unorganized.

Winnemuc'ca, in *Nevada*, a post-town, cap. of Humboldt co., 170 m. N.E. of Reno; has large railroad workshops, several quartz mills, and shipments of grain, cattle, and wool. Silver mines in the vicinity. *Pop.* (1897) 980.

Wino'na, in *Mississippi*, a post-town, cap. of Montgomery co., 23 m. S. of Grenada; has some manufactures, and ships much cotton. *Pop.* (1890) 1,648.

Winoos'ki, in *Vermont*, a post-village of Chitteudeu co., 3 m. E. of Burlington. *Pop.* (1890) 3,659.

Wins'low, John Ancrum, U.S.N., was born in Wilmington, N. C., Nov. 19, 1811; entered the navy (1827); commissioned lieutenant (1839); for gallantry in the Mexican War received promotion, becoming commander in 1855. He was in command of the *Kearsarge* on special service in pursuit of the privateer *Alabama*; found and blockaded her in the harbor of Cherbourg, June 14, 1864; accompanied her outside the neutral ground on Sunday, June 19, and defeated her after a short engagement. W. was promoted commodore, and commanded the Gulf Squadron (1866–67); was on the Board of Examiners (1868–69); rear admiral (1870); commanded the Pacific Squadron (1870–72). Died Sept. 29, 1873.

Win'sor, Justin, librarian, was born in Boston, Mass., Jan. 2, 1831; studied at Harvard, in Paris, and at Heidelberg; was superintendent of the Boston public library (1868–77); and became librarian at Harvard in 1877. He was first president of the American Library Association (1875–86); president of the American Historical Association and secretary of the Massachusetts Historical Society. Of his various works his *Narrative and Critical History of America* (8 vols. 1884–90) is much the most important. His latest work was *The Struggle in America between England and France from 1697 to 1763* (1895). Died Oct. 22, 1897.

Win'ter, William, poet and dramatic critic, was born in Gloucester, Mass., July 15, 1836; educated in Boston, at the Cambridge High School and at Harvard Law School; admitted to the bar; engaged in lecturing in and around Boston, and in writing for the *Transcript* and *Gazette*; removed to New York (1859) and continued his journalistic work, becoming dramatic critic on the New York *Tribune* in 1865, making that depart-

William II.

1859-

John Winthrop

1588–1649

ment in a few years the leading American authority on the drama. He visited England in 1877, and began a series of works descriptive of English scenes and memorials, beginning with *The Trip to England* (1879–80) and including his most popular book, *Shakespeare's England* (1886–95), &c. He also wrote several books on dramatic subjects, and some dainty verse, having issued 3 volumes of the latter: *My Witness* (1871); *Thistledown* (1877); and *Wanderers* (1888–93).

Win'throp, JOHN, colonial governor of Massachusetts, was born in Suffolk, Eng., Jan. 22, 1588; was a student at Cambridge in 1602–05, and was a justice of the peace before he reached the age of 20 years. Having acquired much reputation with the Puritans, he was one of the leaders of the extensive emigration to America that occurred in 1630, in which year, with 900 colonists, he landed at Salem, Mass., on June 22. About the same time the government of the Massachusetts Bay Company was transferred from England to America, and *W.* was elected governor, being annually re-elected until 1634, when, by his defeat he escaped the chief responsibility for the proceedings against Roger Williams, in which, however, he bore a leading part. *W.* was again defeated in the election of 1636, by Sir Henry Vane, whom he in turn defeated in 1637, retaining the governorship until 1640. He was subsequently governor in 1642–44, deputy governor in 1644–45, and again governor from 1646 until his death, March 26, 1649.

Winthrop, ROBERT CHARLES, statesman and orator, was born in Boston, Mass., May 12, 1809; graduated at Harvard (1828); studied law with Daniel Webster, and was admitted to the bar in 1831. He was a member of the Massachusetts Assembly (1836–40), being speaker of the Assembly from 1838 to 1840; member of Congress (1840–50); speaker (1847–49); and was appointed to Webster's seat in the Senate in 1850, and served one year, after which he retired from political life, and devoted himself to literary, historical, and philanthropic occupations, acting as president of the Boston Provident Association for 25 years, of the Massachusetts Historical Society for 30 years, and of the Harvard Alumni for 8 years, besides filling many other positions of honor and usefulness. He was heard as an orator during Presidential campaigns, or on great historical anniversaries, and is remembered as a speaker of rare polish and fervid eloquence. Four volumes of his *Addresses and Speeches* have been published. Died Nov. 16, 1894.

Wire'-glass, *n.* (*Building.*) The combination of wire-netting and glass is an American invention, although unsuccessful attempts were made in England at an earlier date to produce a union of this sort, which is highly valued for skylights and other glazing that requires protection. In 1871 Thaddeus Hyatt, of England, endeavored to mould wire-netting in glass by first stretching the netting in the mold, and then pouring on the glass. As the wire tended to chill the glass and prevent it from forming properly on the under side, Hyatt undertook to force it into position by hydraulic pressure. Here a new difficulty appeared in the form of the sagging and warping of the wire. He succeeded in making only panes of small sizes, for which there was no special demand. In 1887 another Englishman, named Armstrong, tried pouring the glass first, then laying on the netting and depressing with a heavy roller, and following with a second roller to complete the work. He possessed the germ of the idea which subsequently proved successful, but never carried it to completion. Tenner, a German, in 1888, produced wire-glass in small sizes by first pouring a thin layer, then laying on the netting in a red-hot condition, and pouring on a second thickness of glass, submitting the whole to hydraulic pressure. In 1892 another German, Sievert, improved on this by supporting the wire with corrugations on the lower side of the mould; but it was reserved for Frank Shumann, of Philadelphia, to perfect a process suitable for making glass in large sizes. His patent was dated in 1892, and there are now several factories making the glass under his patents. A long cast-iron table is set in the floor, and heated by gas flames, so that when the molten glass is poured thereon it may not cool too suddenly. On this the glass is poured by hand, two workmen carrying a ladle between them on long handles. In the meantime the wire-netting has been heated red-hot, the object being to place it on the glass at as near the temperature of the molten glass as can be maintained. It is laid on by a vehicle consisting of four rollers, which are also kept hot. The first roller serves to level off the molten glass. The second carries with it the red-hot wire-netting, which is fed in from an inclined plane, and pressed into the molten glass by the corrugations with which this roller is furnished. The third roller smoothes the glass again and covers the depressed netting, while the fourth roller is introduced to prevent the curling up of the glass, which at this stage becomes plastic, and sometimes has a tendency to roll up behind the third roller. The glass is ordinarily cast to the sizes in which it is to be used, but it is possible to cut the sheets at any place by scratching with a diamond, and working a little until the blade of a fine saw can be introduced to separate the wire. The rollers used in this process deliver a pressure of 50 pounds to the square inch. Sizes of glass are made as large as 3 by 8 feet. The thickness of the wire-glass is from $\frac{3}{16}$ to $\frac{3}{8}$ of an inch, and the mesh of the netting from $\frac{1}{4}$ inch to 3 inches. Annealed steel wire is commonly used, and before being heated is washed in benzine, and brushed with machines to render it perfectly clean. This wire-glass is specially valuable in large, arched roofs, as of great railway stations, where it does not endanger persons below by small breakages, as is the case with common glass. It is hail-proof, and will bear the snow from any ordinary fall.

Wiscon'sin, Univer'sity of. (*Educ.*) Incorporated in 1836, two years after Wisconsin became a Territory, and organized in 1848, the year in which it became a State. The university, co-educational and non-sectarian, comprising colleges of letters and arts, a law school, and a post-graduate course, derives its support chiefly from an annual State-tax of one-eighth of a mill on a dollar. Its total income in 1904 was about $652,000. At the close of that year its instructors were 227 in number, and its students 3,151, while its library contained about 86,000 volumes. It is located at Madison, the capital of the State.

Wise'man, NICHOLAS PATRICK STEPHEN, theologian, was born in Seville, Spain, Aug 3, 1802; graduated at the English College, at Rome (1824); was made a priest (1825); professer of Oriental languages in the Roman University (1827), and rector of the English College (1828). He returned to England, and became noted as a preacher and lecturer on the doctrines and practices of the Roman Catholic Church. His treatise on the holy eucharist was published soon after, and also his lectures on the connection between science and religion, which have run through many editions, and have been translated into several languages. Having persuaded Pope Gregory XVI. to increase the number of vicars-apostolic in England, he was himself made vicar-apostolic of the London district (1849). In 1850 he was summoned to Rome and was made an archbishop, and then a cardinal, being the seventh English cardinal since the Reformation. In theology, in science, and in philology *W.* was recognized as one of the most distinguished scholars of his time. Died Feb. 15, 1865.

Wither'spoon, JOHN, a signer of the Declaration of Independence, was born in Gifford, Haddingtonshire, Scotland, Feb. 5, 1722; graduated at the University of Edinburgh (1742); in 1768 he accepted the second invitation to become president of Princeton College, New Jersey; began there an active administration, introducing important lecture courses, and various new departments of study, himself teaching Hebrew, theology, moral philosophy, and rhetoric; and at the same time officiating as pastor of the church. He was elected to the Continental Congress, June 21, 1776, and on his arrival in Philadelphia almost his first act was to sign the Declaration of Independence. He sat in Congress until 1782; after which date he returned to the administration of the college, and, except for two visits to England to raise funds, in 1783 and 1784, he resided quietly on his farm near Princeton, where he died, Nov. 15, 1794.

Witte, SERGEI YULEIVICH, COUNT, Russian statesman, was born at Tiflis, July 29, 1849. He was educated in the New Russian University at Odessa, entered the railway service in 1877, and distinguished himself by his ability in transporting troops during the Russo-Turkish war. He was made general manager of the Southwest Railway in 1886, and his efficiency when the imperial family was threatened with a railway disaster in 1887 led to his appointment as Director of Railways. He entered the Russian Cabinet in 1892, was made Minister of Finance in 1893, and held this post for ten years, during which he doubled the revenue and greatly developed Russian manufacturers. In 1903 he was made president of the Council of the State, and in 1905, as a chief commissioner for Russia in the Peace Conference with Japan, obtained a treaty satisfactory to the Russian Government. For his success in this he was created Count, and in the revolutionary excitement that followed was made Premier of the empire, being second in authority to the Czar himself.

Wof'fington, PEG OR MARGARET, actress, was born in Dublin, Ireland, Oct. 18, 1720. She was the most excellent actress of her time. Died March 28, 1760.

Wolse'ley (GARNET JOSEPH.) VISCOUNT, soldier, was born near Dublin, Ireland, June 4, 1833. He entered the British army in 1852, and served with great distinction in Burmah, the Crimea, India, China and Canada. Knighted in 1870, he commanded in the Ashantee war, in South Africa, and in Egypt, where he won the victory of Tel-el-Kebir in 1882, for which he was made a baron and raised to the rank of general, having before served as major-general and lieutenant-general. He was created viscount after the Soudan campaign of 1884-85, appointed commander-in-chief in Ireland in 1890, made field marshal in 1904, and succeeded the Duke of Cambridge as a commander-in-chief of the army in 1895. He was succeeded by Lord Roberts in 1900.

Women's Rights. During the nineteenth century woman, especially in the United States and Great Britain and its colonies, made many steps of advance from her former position of subservience to and dependence upon man, gaining many political and other privileges formerly enjoyed by man alone. The first decided demand for equality in education, employment, and political condition was made by Mary Wolstonecraft in 1792, since which time great progress has been made. The ordinary industrial employments have been opened to woman in a large measure; she has been widely admitted to the advantages of the higher education, many colleges opening their doors to her; and the control of the property of the wife has been largely conceded to her, in distinction to its former complete control by the husband. The condition of woman has been ameliorated in other particulars, and in regard to her claim to take part in public life and enjoy the privilege of voting on an equality with man, much has been gained. The first Woman's Rights Convention ever called met at Seneca Falls, N. Y., July 19, 1848, and there the claim for Woman Suffrage was first definitely made, Elizabeth Cady Stanton being the prime mover in the demand. Largely as a result of the work of the Woman Suffrage Society, woman now enjoys the full right of suffrage in four American States—Wyoming, Colorado, Utah, and Idaho—and partial suffrage in more than half the States. In Great Britain equal activity has been shown and women have gained the right to vote in all except parliamentary elections. For the latter they made a most vigorous demand in 1906, a number of their leaders invading the precincts of Parliament and willingly suffering imprisonment for their cause. Full suffrage is enjoyed by the women of Australia and New Zealand, municipal suffrage in Canada and Cape Colony, and partial suffrage in several of the countries of Europe. Full suffrage was granted in Finland in 1906 to all women over the age of 24. The movement has now a very strong support among the liberals in most countries, and the triumph of woman in all her demands for social and political equality seems but a question of time.

Won'ders, *n. pl.* THE SEVEN WONDERS OF THE WORLD were, according to the ancients: The Pyramids of Egypt (*q. v.*); the Mausoleum of Artemisia (*q. v.*); the Temple of Diana at Ephesus (*q. v.*); the Wall and Hanging-Gardens of Babylon (*q. v.*); the Colossus of Rhodes (*q. v.*); the Statue of Jupiter Olympus (*q. v.*); and the Pharos of Alexandria (*q. v.*).

Wood, FERNANDO, politician, was born in Philadelphia, Pa., June 14, 1812, and removed to New York city in 1820. He became identified with political organizations there, and was elected to Congress in 1841, serving one term; in 1850 was Democratic nominee for mayor of New York, but was defeated; in 1854 was elected and filled the office so well that he was re-elected almost unanimously. The riot troubles in 1857 disaffected many citizens toward the municipal administration, and he was defeated for re-election. In 1859 he was once more elected. He was in Congress (1863–65, 1867–77). Died Feb. 14, 1881.

Wood Pulp. (*Paper Manuf.*) The manufacture of wood pulp has developed to enormous proportions within recent years. Two modes of manufacture are employed, one known as ground or mechanical wood pulp, the other as chemical wood pulp. The former is the cheapest and least valuable, being chiefly used for making newspaper and cheap wrapping papers. Spruce wood is most commonly employed, it being ground against emery wheels revolving under water, the result being a fine wet sawdust. Pulp so made loses its fibre, and has to be mixed with some more fibrous material, as chemical wood pulp, to make newspaper material. In chemical wood pulp, in which spruce, poplar, and other woods are used, the wood is reduced to chips and digested in great tanks in which suitable chemical materials and live steam are introduced. The result is a pulp in which the fibre is retained, the process simply removing its cementing material.

Book and magazine papers are now made almost wholly from chemical wood pulp, sizing being introduced as a filling, and coating and calendering being employed to give a handsome surface. (See PAPER.) The uses of wood pulp are constantly increasing. It has long been employed in the making of basins, pails and small ware, as a substitute for wood or tin. It is introduced in the so-called paper car-wheels, being used as a filling between the rim, hub, and side-plates. It is forced in under great pressure, and renders the wheel less liable to vibration, thus adding to its durability. At Berlin, Prussia, wood-pulp bricks are being manufactured, the pulp being chemically treated and subjected to a pressure of 2,000 pounds to the inch in moulding. The product is extremely solid, tough bricks, weighing less than one-third as much as clay bricks, and costing about 5 cents each. They are specially valued for building underground conduits for electric cables, because of their insulating qualities. Pipes and drain-tiles are also made by a similar process. About 1894 the manufacture of imitation silk thread from wood pulp was undertaken in both England and France. The pulp is forced by heavy pressure through minute holes in a plate, issuing in threads of a smooth, silk-like finish, which are much stronger than naturally would be supposed. There is literally no end to the list of articles that may be made from wood pulp, and this form of manufacture bids fair in time to largely replace the manufacture of wood articles by carving and turning.

Wood'bury, LEVI, jurist, was born at Francistown, N. H., Dec. 22, 1789; educated at Dartmouth and the Litchfield Law School; admitted to the New Hampshire bar (1812); became a Supreme Court judge (1817); governor (1823–24); speaker of the State assembly (1825); U. S. senator (1825–31); secretary of the navy (1831–34); secretary of the treasury (1834–41); again U. S. senator (1841–45); and a justice of the Supreme Court from 1845 till his death, Sept. 4, 1851.

Wood'ford, STUART LYNDON, lawyer, was born in New York city, Sept. 3, 1835; studied law at Yale, and graduated at Columbia (1854), entering upon the practice of law in New York city; was in the Union army (1862), and brevetted brigadier-general of volunteers. He was lieutenant-governor of New York (1868–70); elected to Congress in 1872; and was U. S. attorney for the Southern District of New York (1877–83). He has written addresses and papers on legal, literary, and political subjects. In 1897 he was appointed U. S. minister to Spain, being entrusted with that important mission because of his well-known firmness and diplomatic acumen.

Wood'ruff, in *Arkansas*, a N.E. central co.; *area*, 577 sq. m.; bounded W. by White river and intersected by the Cache river. *Surface*, nearly level; *soil*, fertile. *Cap.* Augusta. *Pop.* (1897) 16,320.

Woods, William Burnham, soldier, was born at Newark, Ohio, Aug. 3, 1824; educated at Western Reserve and Yale Colleges, graduating at Yale in 1845. He studied law in Newark; was mayor of that city (1856–57); member of the legislature (1857–59), being speaker during 1858. He entered the army as lieutenant-colonel of the 76th Ohio Volunteers, and bore a prominent part, leading a division in Sherman's "March to the Sea." He was brevetted brigadier-general, then major-general; and made full brigadier-general May 31, 1865. He settled in Alabama, in the practice of law; was made State chancellor in 1868; U. S. judge of the fifth circuit in 1869, and an associate justice of the U. S. Supreme Court in 1880. Died May 14, 1887.

Woods, in *Oklahoma*, a N. co.; drained by Cimarron river and the North Fork of the Canadian river. *Surface*, in the north and central parts level or slightly rolling, south part rough; *soil*, black and sandy along streams, red in the uplands, but all fertile; salt, gypsum, and timber. *Cap.* Alva. *Pop.* (1897) 19,000.

Wood'ward, in *Oklahoma*, a N.W. co.; drained by Cimarron river, and the North Fork of Canadian river. *Surface*, hilly and undulating; *soil*, alkaline and good only for grass; very little timber. *Cap.* Woodward. *Pop.* (1897) 3,000.

—A post-village, cap. of Woodward co. *Pop.* (1897) 550.

Wool'sey, Sarah Chauncey, writer, better known by her pen-name, Susan Coolidge, was born in Cleveland, Ohio, about 1845; later settled in Newport, R. I. She has written many books for children, and is also known as a writer of pleasing verse.

Woolsey, Theodore Dwight, educator, was born in New York city, Oct. 31, 1801; graduated at Yale (1823); studied law in Philadelphia and theology at Princeton; was a tutor in Yale for two years; spent three years in Germany, studying Greek at Leipsic, Bonn, and Berlin. Returning (1831), he became professor of Greek in Yale, and held the chair for 15 years. In 1846 he was chosen president of the college, and filled that office for 26 years. He was president of the American company of revisers of the English New Testament (1871–81). Dr. *W.* was a frequent contributor to the reviews, and also published a work on *Political Science*, in two volumes; and *Communism and Socialism* (1880), &c. Died July 1, 1889.

Wool'son, Constance Fenimore, novelist, was born at Claremont, N. H., March 5, 1848; was educated at Cleveland, and at Madame Chegary's school in New York city. She began to write in 1869; has been a constant contributor of stories to the leading magazines, many of them serials that have later been issued in book form. Died Jan. 24, 1894.

Wor'den, John Lorimer, U. S. N., was born in Westchester co., N. Y., March 12, 1818 entered the navy in 1835; at the beginning of the Civil War was captured by the Confederates and held as a prisoner for seven months, but subsequently exchanged, ordered to the command of John Ericsson's *Monitor*, and with this vessel fought the memorable battle with the Confederate ironclad *Merrimac*. Later, *W.* destroyed the Confederate privateer *Nashville*, which had taken refuge under the guns of Fort McAllister, and took part in the storming of the forts of Charleston harbor, under Dupont. On May 27, 1868, he was promoted commodore, and from 1871 to 1874 was superintendent of the U.S. Naval Academy. He was commissioned rear-admiral Nov. 20, 1872; on Dec. 23, 1886, he was retired by his own request. Died Oct. 18, 1897.

Worth, Charles Frenerick, costumer, was born at Bourn, in Lincolnshire, Eng., in 1825; went to Paris (1846), and soon started an establishment for the making of fashionable costumes. He was eminently successful as a designer of fashions, and his establishment, in the Rue de la Paix, became the leading emporium of fashion, employing a thousand workwomen. Died March 4, 1894.

Worth'ington, in *Indiana*, a post-town of Greene co., 46 m. N. E. of Vincennes; has water power and manufactures of flour, lumber, and spokes. *Pop.* (1897) 1,562.

Worthington, in *Minnesota*, a post-village, cap. of Nobles co., 92 m. N. N. E. of Sioux City. *Pop.* (1895) 1,918.

Wright, Carroll D., statistician, was born at Dumbarton, N. H., July 25, 1840; was a colonel in the Union army; admitted to the bar (1865); chief of the Massachusetts Bureau of Statistics (1873–88), and first Commissioner of Labor in the Interior Department (1884). He has published reports of Massachusetts censuses, statistics of labor, on which he is an authority; and *The Factory System of the United States* (1882); *Convict and Labor* (1887); and *The Relation of Economic Conditions to the Causes of Crime* (1893).

Wright, Horatio Governeur, U. S. A., was born in Clinton, Conn., March 6, 1820; graduated at West Point and was assigned to the engineer corps (1841); taught engineering at West Point, and was promoted first-lieutenant in 1848. In 1856 he became assistant to the chief engineer in Washington, where he remained until 1861. He served throughout the Civil War, with an exceptionally brilliant record for leadership, becoming major-general of volunteers (1862), commanding a division at Gettysburg; and later the Sixth Army Corps; was in every engagement of the Army of the Potomac up to July, 1864. He defeated Early at Snicker's Gap; was with Sheridan at Fisher's Hill, Opequan, and Cedar Creek. Mustered out of the volunteer service in 1866, he returned to regular army duty as lieutenant-colonel of engineers, becoming by regular promotion brigadier-general and chief of engineers June 30, 1879. Retired March 6, 1884; died July 2, 1899.

Wyandotte (*wī'ăn-dŏt*) **Cave, The.** An extensive cavern in the limestone underlying Crawford county, S. W. Indiana. More than 22 miles of galleries have been mapped out and many remain unexplored. "The Wyandotte Cave," the late Prof. E. D. Cope wrote, in *The American Naturalist*, "is as well worthy of popular favor as the Mammoth. It lacks the large bodies of water which diversify the scene in the latter, but is fully equal to it in the beauty of its stalactites and other ornaments of calcite and gypsum. The stalactites and stalagmites are more numerous than in the Mammoth, and the former frequently have a worn, or macaroni-like form, which is very peculiar. They twist and wind in masses like the locks of Medusa, and often extend in slender runners to a remarkable length. The gypsum rosettes occur in the remote regions of the cave, and are very beautiful. There are also masses of amorphous gypsum of much purity. The floor in many places is covered with carved branches, and, what is more beautiful, of perfectly transparent acicular crystals, sometimes mingled with imperfect twin-crystals. The loose crystals in one place are in such quantity as to give the name of *Snow Banks* to it. In other places it takes the form of japanning on the roof and wall rock. In one respect the cave is superior to the Mammoth—in its vast rooms, with step-like domes, and often huge stalagmites on the central hills. In these localities the rock has been originally more fractured or fragile than elsewhere, and has given way at times of disturbance, piling masses on the floor. The destruction having reached the thin-bedded strata above, the breaking down has proceeded with greater rapidity, each bed breaking away over a narrower area than that below it. When the heavily-bedded rock has been again reached, the breakage has ceased, and the stratum remains as a heavy coping-stone to the hollow dome. Of course the process piles a hill beneath, and the access of water being rendered more easy by the approach to the surface, great stalactites and stalagmites are the result. In one place this product forms a mass extending from floor to ceiling, a distance of 30 or 40 feet, with a diameter of 25 feet, and beautifully fluted circumference. The walls of the rooms are incrusted with cataract-like masses, and stalagmites are numerous. The largest room is stated to be 245 feet high and 350 feet long, and to contain a hill of 175 feet in height. On the summit are three large stalagmites, one of them pure white. When this scene is lit up it is peculiarly grand to the eye of an observer at the foot of the long hill, while it is not less beautiful to those on the summit. There is no room in the Mammoth Cave equal to these two. An examination into the life of the cave shows it to have much resemblance to that of the Mammoth."

Wy'att, Sir Matthew Digby, architect and writer on art, was born in Wiltshire, England, in 1820. As an architect, he superintended the work on the Crystal Palace in London (1851), and in 1852–54 had charge of the decorations and fine arts departments in the new Crystal Palace at Sydenham. He furnished designs for many important buildings in England and India; was knighted in 1869; was Slade professor of Fine Arts at Cambridge (1869–72). He wrote at length on the popular topics related to his profession. Died May 21, 1877.

Wy'more, in *Nebraska*, a post-village of Gage co., 13 m. S. of Beatrice; has railroad machine shops and roundhouse; grain and live stock are largely shipped. *Pop.* (1897) 3,100.

Wyndham, Charles, actor, was born in 1841; studied medicine, but drifted into the theatrical profession, making his first appearance in America, in 1862, playing *Osrick* to John Wilkes Booth's *Hamlet*, at Washington. He entered the Union army as surgeon, having medical charge of a regiment for a time. Returning to England, he again went upon the stage, with marked success, since which time he has continued to act in England and Germany, and at intervals in America.

Wyo'ming, in *Illinois*, a post-town of Stark co., 31 m. N. by W. of Peoria; has some manufactures. *Pop.* (1897) 1,210.

Wyoming, in *Ohio*, a post-village of Hamilton co. *Pop.* (1897) 1,640.

X (*eks,*) the twenty-fourth letter of the English alphabet, borrowed from the Greek through the Latin, has the sound of *z* at the beginning of a word, but elsewhere the sound of *ks*, as in *excellent, wax, luxury*, or of *gs*, as in *example*. It is used chiefly in words derived from the Greek, and begins no word of Anglo-Saxon origin. The Italians never use it, *s* and *c* being substituted for it; as, *esatto*, exact, *eccellente*, excellent. The Germans commonly in place of *x* use *ks*, *gs*, or *chs*; as, *fuchs*, a fox. In French, *x* has a variety of pronunciations, as *s, cs, gz*, and *z*. This letter interchanges with *c, sc* or *sk, g, ps, h*, and *z*. As a Latin numeral, X stands for 10; when placed horizontally, thus ⋈, it indicates 1000, and when erect with a dash over it, X, implies 10,000. As an abbreviation, X. stands for *Christ*, and Xn. for *Christian*.

(NOTE. For names (chiefly geographical) not inserted under this letter, see the letters J, G, and S.)

Xamiltepec', or JAMILTEPEC, in Mexico, a town of Oajaca, 70 m. S.S.W. of Oajaca; *pop.* abt. 4,000.

Xan'theine, *n.* [Gr. *xanthos*, yellow.] The yellow coloring-matter of flowers.

Xan'thic Acid, or SULPHOCARBETHYLIC ACID, *n.* (*Chem.*) An acid composed of sulphur, carbon, hydrogen, and oxygen, and obtained in combination with potassa by agitating bisulphuret of carbon mixed with a solution of pure potassa in strong alcohol. Its compounds are of a yellow color, whence its name.

Xan'thine, *n.* (*Chem.*) The yellow coloring principle of madder.

Xan'thite, *n.* (*Min.*) A variety of Idocrase, found in small rounded grains or imperfect crystals of a yellow or grayish color, at Amity, in New York. Its principal constituents are silicate of alumina and silicate of lime.

Xan'thium, *n.* (*Bot.*) A gen. of plants, ord. *Asteraceæ*. The Prickly Clotweed, *X. spinosum*, found in roadsides and fields from Massachusetts to Pennsylvania, is about 1 foot high, and very conspicuously armed with straw-colored spines. It yields a yellow dye.

Xan'thocone, *n.* [Gr. *xanthos*, yellow, and *konis*, dust.] (*Min.*) An arsenio-sulphide of silver, generally found in small crystalline kidney-formed masses. It is of a dull-red or clove-brown color, but affords a yellow powder — whence its name.

Xan'thophyll, *n.* [Gr. *xanthos*, and *phyllon*, a leaf.] (*Chem.*) The yellow, autumnal coloring of leaves.

Xan'thoprotein, *n.* [Gr. *xanthos*, and *proteion*, the chief rank.] (*Chem.*) A yellow acid substance, formed by the action of nitric acid upon fibrin.

Xan'thorham'nine, *n.* [Gr. *xanthos*, and *ramnos*, a prickly shrub.] (*Chem.*) A yellow substance extracted from the berries of *Rhamnus tinctoria*, the *Persian berries* of commerce.

Xanthorrhi'za, *n.* [Gr. *xanthos*, and *riza*, a root.] (*Bot.*) A gen. of plants, ord. *Ranunculaceæ*, represented by the Yellow-root, *X. apiifolia*, of the Southern States. Its long roots and rootstocks are of a bright yellow color. Its inner bark, wood, and pith are also of the same color. The whole plant was formerly employed by the American Indians for dyeing yellow; and it is used medicinally as a tonic, all parts of it having a purely and intensely bitter taste.

Xanthorrœa, (*zăn'tho-re'ă,*) *n.* [Gr. *xanthos*, and *reo*, to flow.] (*Bot.*) The Grass-trees, a gen. of plants, ord. *Liliaceæ*. The tall-growing species, *X. arborea*, *X. hastilis* (Fig. 2632), and others, are natives of New South

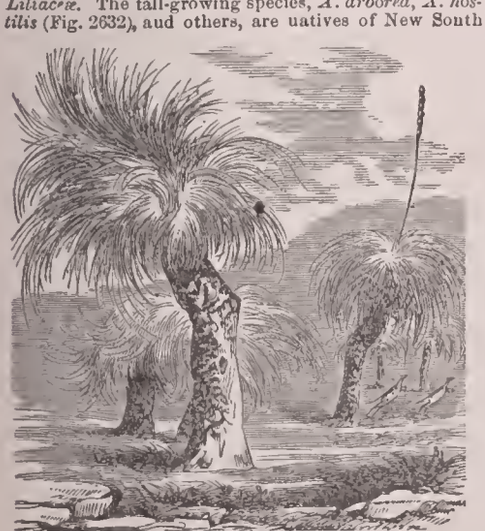

Fig. 2632. — GRASS-TREE, (*X. hastilis.*)

Wales. Their tops afford fodder for cattle, and their young leaves and buds are eaten as a table vegetable. Two fragrant balsamic resins are obtained from species of this genus: the one is known as yellow resin of New Holland, or Botany Bay resin; the other as red resin of New Holland, or Black boy gum.

Xan'thorthite, *n.* [Gr. *xanthos*, and *orthos*, straight.] (*Min.*) A yellowish variety of Allanite, found in Sweden.

Xanthosid'erite, *n.* [Gr. *xanthos*, and *sideros*, iron.] (*Min.*) A variety of brown iron-ore, occurring in yellowish-brown concentric and radiating aggregations of fine fibres with a silky lustre, in the Harz.

Xanthoxylaceæ, (*zăn-thoks-e-lai'se-e,*) *n.* [Gr. *xanthos*, and *xylon*, wood.] (*Bot.*) An order of plants, alliance *Rutales*, closely allied to *Rutaceæ*. They are trees or shrubs, most abundant in the tropics, but especially in tropical America. They are generally characterized by pungent and aromatic properties, and have been employed medicinally as stimulants. The species of the typical genus *Xanthoxylon* possess in a remarkable degree the aromatic and pungent properties common to the order; hence they are popularly known as *Peppers*, Prickly ash. The fruit of *X. piperitum* is employed by the Chinese and Japanese as a condiment, and as an antidote against all poisons. In commerce it is called *Japanese pepper*.

Xanthox'ylum, *n.* (*Bot.*) See XANTHOXYLACEÆ.

Xan'thus. (*Anc. Geog.*) The capital of ancient Lycia, in the S.W. corner of Asia Minor, 9 m. from the sea, on the left bank of the Sibres or Sibrus, the Greek Xanthos, or Yellow River, near the actual village of Koonik. Its ruins, discovered by Sir C. Fellows in 1838, consist of temples and tombs, having carefully executed bas-reliefs of great archæological interest.

Xan'tippe, whose name has passed into a proverb for a scolding wife, was the spouse of Socrates the philosopher, and notwithstanding her ill temper was deeply attached to him. The date of her death is unknown.

Xantip'pus, a Lacedæmonian general, who went to the support of the Carthaginians in 255 B.C., and defeated the Romans under Regulus at Tunes (now Tunis). Notwithstanding his services, the Carthaginians ordered the captain of his ship to throw him into the sea.

Xati'va, or JATIVA, (*cha-te'va.*) a city of Spain, standing on the slope of a hill crowned by an old castle, 36 m. from Valencia. *Manuf.* Linen and woollen fabrics, hats, leather, and soap.

Xavier, ST. FRANCIS, (*za've-ai,*) "the apostle of the Indies," a celebrated Jesuit missionary, B. in Spain, 1506. He was sent to study at Paris, and there met Ignatius Loyola, whose affectionate disciple and ally he thenceforth became. He assisted Loyola in the formation of the new society, and gladly undertook, in 1540, the laborious mission to the East Indies. After very devoted services at Goa on the Malabar coast, in Chavancore, and in the islands of the Archipelago, he went to Ceylon. Meeting there a Javanese refugee, he accompanied him, in 1549, to Japan, and established there the mission which was maintained by the Jesuits more than a century. On his return to India he fell ill, and D. on an island off the coast of China, in Dec., 1552. He was beatified in 1619, and canonized by Gregory XV. 3 years later.

Xe'bec, *n.* (*Naut.*) A small felucca-looking vessel common to the Mediterranean Sea (Fig. 1524), carrying three masts, and which in fair weather and with a good wind mounts two large square sails, but when close-hauled carries large lateen sails.

Xe'nia, in *Ohio*, a city and township, cap. of Greene co., 61 m. W.S.W. of Columbus. *Pop.* (1897) 7,750.

Xe'nidæ, *n. pl.* (*Zoöl.*) See ALCYONACEA.

Xenocrates, (*ze-nok'ra-tees,*) a Greek philosopher, remarkable for the severity of his manners, and his incorruptible integrity, was B. at Chalcedon about B.C. 400. He was a pupil of Plato, and sent on embassies to Philip, king of Macedonia, and afterwards to Antipater. It is said that the Athenians caused him to be sold as a slave, because he was too poor to pay the taxes. Demetrius Phalereus, however, discharged the debt, and gave him his freedom. He was for many years head of the Academy. D. B.C. 314.

Xenophanes, (*ze-nof'a-nees,*) a Greek philosopher and poet, was a native of Colophon, and settled at Elea in Magna Græcia. He lived in the latter half of the 6th century B.C., and was a contemporary of Pythagoras. He is recognized as the founder of the Eleatic School, the characteristic doctrine of which was an idealistic pantheism. Fragments of his poem *On Nature* and of his elegies are all that are preserved to us of his writings.

Xenophon, (*zen'o-fon,*) a celebrated Athenian historian, B. probably about B.C. 450. He was a disciple and friend of Socrates, who saved his life at the battle of Delium. With his friend Proxenus he joined the army of Cyrus the younger as a volunteer in the expedition against Artaxerxes. After the death of Cyrus, at the battle of Cunaxa, and the treacherous murder of the Greek generals, *X* took the lead in conducting the famous *Retreat of the Ten Thousand* from Upper Asia to their native land. He afterwards served in the Spartan army against the Persians, and sentence of banishment being passed on him by the Athenians, he retired into Elis, and lived there about 20 years. It is not known whether he availed himself of the permission to return to Athens, nor when nor where he D. He was living B.C. 357. The principal works of *X.* are the *Anabasis of Cyrus*, the history of the expedition in which the historian took so prominent a part; the *Cyropædia*, a fascinating picture of an ideal state based on the traditions respecting the elder Cyrus; the *Memorabilia of Socrates*, a very precious memorial of the great practical philosopher; and the *Hellenica*, a historical narrative. He wrote several shorter works. *X.*'s mode of thought is practical, not speculative, and his style is singularly lucid, simple, and manly.

Xen'otime, *n.* (*Min.*) A phosphate of Yttria, found at Ytterby, in Sweden.

Xera'sia, *n.* [From Gr. *xeros*, dry.] (*Med.*) A disease of the hairs, which become dry, cease to grow, and resemble down covered with dust.

Xeres de Badajos, or XERES DE LOS CABALLEROS, (*hai-rais,*) a town of Spain, in Estremadura, 40 m. from Badajoz. *Pop.* 6,817.

Xeres de la Frontera, a town in the S.W. of Spain, in Andalusia, 14 m. from Cadiz. It is agreeably situate on the banks of the small river Guadalette, and is celebrated for its excellent sherry wines, of which large quantities are annually exported.

Xerxes I., (*zer'kseez,*) king of Persia, was the son of Darius, and succeeded him to the throne B.C. 485. After suppressing a revolt in Egypt, he prepared for the invasion of Greece. In 480 he set out at the head of an enormous host, which he reviewed at Doriscus, and succeeded in reaching the pass of Thermopylæ. Great part of his fleet was destroyed by a storm; the rest of it engaged the Greek fleet off Artemisium. At the same time took place the memorable battle of Thermopylæ, in which Leonidas and his band of Spartans heroically withstood the Persian host for several days, and then fell through treachery. *X.* then advanced to Athens, and at the battle of Salamis saw his fleet defeated by Themistocles. He returned to Persia, leaving his general Mardonius to carry on the war in Greece. Murdered by Artabanus, B.C. 465.

Xhmenes (*zim'-ē-nēz*), an eminent Spanish prelate; born in 1437, died in 1517.

Ximo, or KIUSIU, (*ze'mo.*) The most S. of the three principal islands of Japan, in the Pacific Ocean, separated from Corea by the Strait of Corea, and from Niphon Island by the Strait of Sikoke. It is mountainous, and has several volcanoes. *Pop.* unascertained. — Nagasaki, the chief commercial port of Japan, is in this island.

Xingu, or CHINOU, (*shing-goo'*,) in Brazil, a river of Matto-Grosso and Para, rises near Lat. 15° S., Lon. 59° W., and flows into the Amazon, 240 m. W. of Para, after a N. course of 1,300 m.

Xiphias, *n.* (*Zoöl.*) The Sword-fishes, a genus of the family *Scomberidæ*, comprising fishes which have a very long beak, and sword-like upper jaw. The common Sword-fish, *X. gladius*, of the Atlantic and Mediterranean, is from 10 to 16 feet long. It attacks the largest animals of the sea, and swims with astonishing swiftness.

(*Astron.*) A constellation in the southern hemisphere; — also called *Dorado* and *Sword-fish*.

Xiph'oid, *a.* [Gr. *xiphos*, a sword, and *eidos*, form.] (*Anat.*) Applied to the ensiform or sword-like cartilage which terminates the sternum beneath. — Applied also to a small, very thin, ligamentous fasciculus, which passes from the cartilage of prolongation of the 7th rib to the anterior surface of the xiphoid cartilage.

Xiphoid'es, *n.* (*Anat.*) The xiphoid cartilage.

Xister, or RASPATORIUM, *n.* (*Surg.*) An instrument used for rasping bones, to detach the periosteum.

Xnear, (*hoo'kar,*) a river of Spain, rising in the Sierra Albarracia, and after a course of 200 m., falling into the Mediterranean, 26 m. from Valencia.

Xulla Islands, (*zool'la,*) a group in the Malay Archipelago, to the S.E. of the Molucca passage. It comprises Zulla-Bessey, Mangola, and Taliabo. The first has a length of abt. 400 m.

Xy'lite, *n.* [From Gr. *xylon.*] (*Min.*) An asbestiform mineral, resembling xylotile in composition and structure, as well as in its brown color.

Xy'lochlore, *n.* [Gr. *xylon*, and *chloros*, green.] (*Min.*) A mineral closely resembling apophyllite, and found in olive-green crystals in Iceland.

Xy'locopa, *n.* (*Zoöl.*) See APIDÆ.

Xyloi'dine, *n.* [Gr. *xylon*, wood.] (*Chem.*) A white granular substance, formed by the action of nitric acid upon starch.

Xy'lol, *n.* (*Chem.*) Any one of three isomeric colorless liquid hydrocarbons, occurring among the oils in crude wood-spirits. It is homologous with benzol and tutol; is frequently called *Xylene*. Form. C_8H_{10}.

Xyl'ophone, *n.* A musical instrument consisting essentially in a row of wooden bars of graduated lengths, which, when struck with small mallets, emit the various tones of the diatonic scale.

Xylo'pia, *n.* (*Bot.*) A genus of plants, order *Anonaceæ*. *X. aromatica*, commonly known as *Piper æthiopicum*, has aromatic fruit, which when dried is used medicinally by the African negroes on account of its stimulant and carminative effects, and also as a sediment. *X. undulata* has nearly similar properties. *X. glabra* yields the Bitter-wood of the West Indies, which has tonic properties.

Xylor'etine, *n.* [Gr. *xylon*, and *retine*, resin.] A crystalline resinous substance, found in certain varieties of turf.

Xy'lotile, *n.* [Gr. *xylon*, and *tilos*, flock or down.] (*Min.*) A delicately fibrous variety of chrysotile, of various shades of wood-brown and green.

Xyrida'ceæ, *n. pl.* [From *xyris*, the typical genus.] (*Bot.*) A small order of plants, alliance *Xyridales*. DIAG. Sepals opposite the carpels, 3 petals, 3 fertile stamens, parietal placentæ, and a minute embryo on the outside of fleshy albumen. The species consist of ledge-like herbaceous plants, found in tropical and subtropical regions.

Xy'ridales, *n. pl.* (*Bot.*) An alliance of plants, class *Endogens*. DIAG. Hypogynous, bisexual, tripetaloid endogens, with copious albumen. It includes 4 orders.—PHILYDRACEÆ, XYRIDACEÆ, COMMELYNACEÆ, and MAYACEÆ, *q.v.*

Y.

Y (*wī,*) the twenty-fifth letter of the English alphabet, is derived from the Greek *r*, and in French and Spanish is called the "Greek *i*." It is a consonant at the beginning of words, when it is produced by the emission of breath, whilst the root of the tongue is brought into contact with the hinder part of the palate, and the edges of the tongue are pressed against the roof of the mouth. At the end of words it is a vowel, and has exactly the sound of *i*. In the body of words, *i* usually takes the place of *y;* but when it occurs, it has the same sound. In English the sound of *y* is usually given to a word beginning with a long *u*, as *union, unity.* As a numeral, Y stands for 150, and with a dash over it, thus Ȳ, for 150,000.

(Note. For names not found under this letter, see *I* or *J.*)

(*Steam-engine.*) Y-shaft, (sometimes corrupted into *weigh-shaft,*) is the shaft for moving the valve, and is so called because in the old atmospheric engines the forked lever for giving motion to the valve or regulator was made in the form of the letter Y.

Y (*i*), an arm or inlet of the Zuyder-Zee, on the shores of which stands Amsterdam.

Yac'ca-wood, *n.* The ornamental wood of *Podocarpus coriacea*, a tree of the order *Taxaceæ*, used in the West Indies for cabinet-work.

Yacht, (*yot,*) *n.* [Ger. *jacht.*] A light, decked, and elegantly fitted-up vessel for excursions of pleasure. *Yacht clubs* are associations formed with a view to improvement in yacht building for private owners and yacht sailing. When got up on a large scale, they are recognized and fostered by the government under which they respectively exist, which furthermore extend to regularly established foreign clubs the privileges they accord to their own. The U. States, Great Britain, France, Holland, Belgium, and Russia, have their national, royal, or imperial clubs, but it is in the United States and in Great Britain that these institutions have taken the firmest hold. The New York Yacht Club was established in 1884, and has stimulated the formation of others until there are now in the U. S. 230 yacht clubs, with an average membership of 150, making a total of 34,500 yachtsmen, of whom about 10,000 own yachts. Of these yachts about one-third are steamers, about 2,000 are schooners, and the remainder are of the sloop, cat, and other types. The steamers range from the palatial craft costing $500,000, to the little $1,000 naphtha launch. Yacht clubs are also numerous in Great Britain, the oldest being the Royal Cork Yacht Club (originally the Cork Harbor Water Club), established before 1720. See America's Cup.

Yacht'ing, *n.* Act of sailing on pleasure excursions in a yacht.

—*a.* Relating to a yacht or yachts; as, a *yachting* voyage.

Yad'kin, a river in *N. Carolina.* See Pedee (Great).

—A N.W. co.; *area,* 320 sq. m. It is drained by Yadkin river, and Deep creek. *Surface,* diversified; *soil,* fertile. *Cap.* Yadkinville. *Pop.* (1897) 14,450.

—A township of Stokes co.

Yak, *n.* (*Zoöl.*) A ruminant animal of the genus *Bos*, the Grunting Cow of Tartary, *B. grunniens.* It is about

Fig. 2633.— yak, (*Bos grunniens.*)

the size of an ordinary ox, which it much resembles in figure of body, head, and legs. It is covered all over, however, with a thick coat of long silky hair, hanging down like the fleece of a sheep. His white tail resembles that of a horse, and is much prized in the East, where it is used to brush away flies, and also as an emblem of authority. It makes a grunting noise, similar to that of a hog. It is domesticated in Thibet.

Ya'ger, or Jaoer, *n.* [Ger., hunter.] One of the light infantry armed with rifles (*chasseurs, riflemen*). In the Prussian service, the yagers form a distinct corps with peculiar discipline; in that of Austria, light infantry, generally from the mountain districts.—In Germany, the term *jäger* is also applied to a peculiar species of higher servant attached to the families of the aristocracy.

Yaguanique (*ya-gwa-nee'ka*), a seaport of Cuba, on the N. coast, 40 m. N.E. of Baracoa.

Ya'kimo Si'ma, an island of Japan, 40 m. S. of Kiusiu, Lat. 30° 24′ N., Lon. 130° 30′ E. It is 20 m. long and 8 wide.

Yakutsk (*ya-kootzk'*), a town of Siberia, on the W. bank of the Lena river, cap. of an enteusive province of same name, in Lat. 62° 2′ N., Lon. 130° 8′ E. It is the emporium for the furs collected in the regions of the North; also of the Russian trade with Kamchatka. The thermometer in winter falls to 70° below zero.

Yallobusha, or Yalabusha, in *Mississippi*, a river rising in Chickasaw co.; flowing W.S.W., unites with the Tallahatchie to form the Yazoo.

—A N. central co.; *area,* 450 sq. m. *Rivers.* Yallobusha and the Loosascoona. *Surface,* undulating; *soil,* fertile. *Cap.* Coffeeville.

Yam, *n.* (*Bot.*) A genus of plants (*Dioscorea*), chiefly natives of the West Indies, Polynesia, China, and other tropical and semi-tropical countries. They have twining stems and tuberous roots, some of which are much used as articles of food, as the potato is in the temperate zones. They contain much starch, and as a rule become somewhat mealy and palatable when boiled. This is not always the case, however, the roots of some species being nauseous and poisonous. They all contain an acrid substance, but this is usually dissipated by boiling. The tubers of the winged yam of Polynesia are from 1 to 3 feet in length and often 30 lbs. in weight, with a blackish skin, but reddish and juicy within. It is supposed that this species may be the original of most of the cultivated yams, including the common yam of the West Indies, the prickly yam of India, and other varieties. Yams are propagated by means of the small tubers which supplement the large ones. One species, *D. batatas*, brought from China, is found to succeed well in France, and will grow in Scotland, but not produce large tubers. The root strikes perpendicularly into the ground, its tubers being formed often at a considerable depth below the surface. The true yam has been but little cultivated in the U. S., though the name of yam is often given to the sweet potato, a plant of different origin. See Dioscoraceæ.

Yamas'ka, in province of Quebec, a central co.; *area,* 283 sq. m. *Rivers.* Nicolet, St. Francis, and Yamaska. Lake St. Peter borders it on the N.W. *Cap.* Pierreville.

—A post-village, former cap. of the above co., on the Yamaska river, 56 m. N.E. of Montreal.

Yam Hill, in *Oregon*, a N.W. co.; *area,* 640 sq. m. *Rivers.* Willamette, Yam Hill, and the North Fork of the latter. *Cap.* McMinnville. *Pop.* (1897) 12,250.

Yan'cey, in *North Carolina*, a W. co., bordering on Tennessee; *area,* 298 sq. m. It is drained by Nolachucky river. *Surface,* mountainous, Mount Mitchell, on the S.E. border, being 6,470 feet high; *soil,* fertile in the valleys. *Cap.* Burnsville. *Pop.* (1897) 10,150.

Yan'ceyville, in *North Carolina*, a post-village, cap. of Caswell co., 75 m. N.W. of Raleigh. *Pop.* (1897) 520.

Yang-tse-Kiang' (or simply Kiang or Chiang), the largest and most important of the rivers of China, and one of the great rivers of the world. It rises in the mountains of Thibet, where its sources were reached and explored by Prejevalsky in 1884–85, and crosses the whole breadth of China, affording a waterway, at times broken by rocks and rapids, from Thibet to the sea. The total length of the river is 3,200 miles, its course lying through the provinces of Yunnan, Sz-chuen, Hoo-pe, Nganhwui, and Kiangsu, and ending in a wide estuary, which begins some 50 miles below Nanking and ends in the vicinity of Shanghai. In addition to the main stream there are many tributaries, some of which are over 1,000 miles long, the drainage basin having a total area of about 690,000 sq. m. The Kiang is of great importance as a channel of commerce. In addition to Nanking, there are on its banks the important towns of Chinkiang, Ncanking, Hankow, Wuchang, Ichang, and Chungking (the last opened to European commerce in 1890). Steamboats ply on the lower reaches of the river, while the navigation of its upper waters is performed by the native boats. Even these find difficulty in certain parts of the stream, having to be driven by poling through the narrow gorges against a strong current. This stream, however, is not subject to the frightful and destructive inundations of the Hoang-ho, China's other great river.

Yan'ina, or Janina, a town of Thessaly, situated on a lake, which communicates with the River Peneus, 40 m. W. of Larissa. It is the capital of a pashalic of the same name, with irregular and ill-paved streets, and many of the houses are simply mud-huts. It has about 16 mosques and a large number of bazaars, where jewelry and articles of dress are displayed in great abundance. It carries on a considerable trade, and exports for the Italian ports wool, corn, oil, and tobacco. Inwardly, through Roumelia and Albania, it sends embroidered velvets, stuffs, and cloths, with the stocks of guns and pistols mounted on chased silver. *Pop.* Variously estimated at from 10,000 to 20,000. — This place, in the time of Ali Pasha, enjoyed a high degree of prosperity; but since his death, in 1822, it has greatly fallen into decay. — The lake is of no great depth, but is surrounded by mountains attaining an elevation of 3,000 feet, rising abruptly from the water's edge, and exhibiting a grand appearance.

Yank, *v. a.* To jerk. (Local U. S.)

Yan'kee, *n.* A popular term for a native or inhabitant of New England; often indiscriminately applied by foreigners to all inhabitants of the U. States. Many ridiculous etymologies have been assigned for this word, which appears to be a corruption of the Indian pronunciation of "English." They called them Yenghees, and the term Yankee was applied to the people of New England abt. 1775.

Yan'keeism, *n.* A Yankee idiom, phrase, custom, or character.

Yan'kee Hill, in *California*, a post-village of Butte co., 16 m. N. of Oroville.

Yan'kee Jims, in *California*, a post-village of Placer co., 22 m. N.E. of Auburn.

Yan'kee Springs, in *Michigan*, a post-village and township of Barry county.

Yan'kee Town, in *Wisconsin*, a village of Crawford co., about 40 m. S.S.E. of La Crosse.

Yank'ton, in *South Dakota*, a S.E. co.; *area,* 515 sq. m. *Cap.* Yankton. *Pop.* (1895) 11,305.

—A city, cap. of the above co., on Missouri river, near the mouth of the Dakota. *Pop.* (1895) 3,814.

Yan'tic, in *Connecticut*, a river of New London co., unites with the Shetucket at Norwich to form the Thames. — A post-village of New London co., 16 m. N. of New London.

Yap, *v. n.* To bark; to yelp; to yaup.

Yaphank', in *New York*, a post-village of Suffolk co., 60 m. E. of Brooklyn.

Yap'on, *n.* (*Bot.*) The South Sea Tea, *Ilex vomitoria.* See Ilex.

Yaque', or Yaqui, a river of Hayti, which enters the bays of Monte Christo and Manzanilla, after a N.W. course of 100 m.

Yaque'sila, or Jaquesila, in *New Mexico*, a river which flows into the Colorado River abt. Lat. 36° N.

Yaqui, or Huaqui, (*ya'kee.*) in Mexico, a river of Sonora, rises N. of Lat. 32° N., and enters the Gulf of California, 25 m. S.E. of Guaymas, after a S.S.W. course of 400 m.

Yard, *n.* [A. S. *gyrd*, a staff, a rod.] The American standard measure of length. See Weights and Measures.

(*Naut.*) A long, cylindrical piece of timber, having a rounded taper toward each end, and slung by its centre to a mast.

(*Astron.*) *Yard*, or *Golden yard*, are popular names given to the three stars in the belt of Orion.

—[A. S. *geard;* Du. *gaard;* — from A. S. *gyrdan*, to gird.] A small piece of ground, usually one adjoining a house; an inclosure within which any work or business is carried on.

—*v. a.* To inclose in a yard; to shut up in a yard, as cattle.

Yard'-arm, *n.* (*Naut.*) The extremity of the yard.—*Yard-arm and yard-arm* is a term descriptive of two ships engaging each other as close as possible.

Yard'leysville, in *Pennsylvania*, a post-village of Bucks co., 128 m. E. of Harrisburg.

Yar'kand, the cap. of Chinese Turkestan, on the river of the same name. It stands in a fertile plain; is the residence of a Chinese governor, and a kind of emporium for the inland trade of Asia. Lat. 38° 20′ N; Lon. 76° 7′ 43″ E. *Pop.* abt. 150,000.—The river rises on the N. side of the Karakorum Mountains, and, after uniting with several other rivers, and pursuing a course of 500 m., finally enters a lake in the desert of Gobi.

Yar'mouth, or Great Yarmouth, a seaport and borough of England, co. of Norfolk, 18 m. from Norwich; Lat. 52° 36′ 8″ N., Lon. 1° 43′ 7″ E. It stands on a peninsula, having the sea on the E., and on the W. the Yare, over which there is a drawbridge, which affords communication with South Town, or Little Yarmouth, and with Gorlestone. *Y.* has long been much frequented as a fashionable watering-place. Its harbor is perfectly secure, but the coast upon which it is built is the most dangerous in England, and has been often the scene of the most disastrous shipwrecks. It is the principal seat of the English herring-fishery, and has also a considerable coal-trade.

Yarmouth, in *Maine*, a post-village and township of Cumberland co., 12 m. N. of Portland.

Yarmouth, in *Massachusetts*, a post-township of Barnstable co., 70 m. S.S.E. of Boston.

Yarmouth, a seaport-town of Nova Scotia, 130 m. S. W. of Halifax.

Yar'mouth Port, in *Massachusetts*, a post-village of Barnstable co., on the N. shore of the peninsula.

Yarn, *n.* [A. S *gearn.*] Thread prepared from wool or flax by spinning; spun wool; woollen, cotton, or linen thread; one of the threads or strands of which a rope is composed.

Yar'oslav. See JAROSLAV.

Yar'riba, a state of Central Africa, in Guinea, near the Niger. It has been little explored by Europeans. Lat. 9° N.. Lon. from 3° to 6° E.

Yar'rish, *a.* That has a rough, dry taste.

Yar'row, *n.* [A. S. *gearwe.*] (*Bot.*) See ACHILLEA.

Yat'aghan, *n.* A Turkish short-sword or long dagger.

Yates, in *New York*, a W. central co.; *area*, 320 sq. m. Seneca Lake borders it on the E., and Canandaigua and Crooked lakes on the W., and it is drained by the outlet of the latter and Flint Creek. *Surface*, undulating; *soil*, fertile. *Cap.* Penn Yan. *Pop.* (1897) 21,950.

—A post-township of Orleans co.

Yates City, in *Illinois*, a post-village of Knox co., 23 m E.S.E of Galesburg.

Yates'ville, in *New York*, a village of Yates co., 190 m. W. of Albany.

Yat'ton, in *Iowa*, a post-village of Washington co., 16 m. S.W. of Iowa City.

Yaup, *n.* The cry of a child or bird; a yelping. (Col.)

—*v. n.* To yelp; to cry as a child or bird;—also written *yaulp*, *yawp*, and *yap*.

Yaup'er, *n.* One who yaups.

Yav'apai, in *Arizona*, a N.E. co.; *area*, 29,236 sq. m. *Rivers.* Gila, Rio de Lino, Rio Salinas, and Rio Verde. *Surface*, diversified; *soil*, fertile in the valleys. *Min.* Gold and silver. *Products.* Chiefly live stock. *Cap.* Prescott. *Pop.* (1897) 9,350.

Yaw, *n.* (*Naut.*) A temporary deviation from a direct line.

—*v. n.* (*Naut.*) To steer wild or out of the line of the course, as a ship.

Yawl, (*yal,*) *n.* (*Naut.*) A small ship's boat, usually rowed by four or six oars; the smallest boat used by fishermen.

—*v. n.* To cry out; to yell. (R.)

Yawn, (*yan,*) *v. n.* [A. S. *gynian, geonian*; Gr. *chaino.*] To open the mouth as in chewing; to gape; to have the mouth open involuntarily through drowsiness or dullness.—To open wide; as, wide *yawns* the gulf below.—To express desire by yawning. (R.)

—*n.* A gaping; an involuntary opening of the month from drowsiness; an opening wide.

Yawn'ing, *n.* (*Physiol.*) The act of one who yawns, consisting of a deep and slow inspiration and expiration, attended with an involuntary opening of the mouth. It is generally produced by weariness or an inclination to sleep; sometimes by hunger, sympathy, &c. It often precedes the fit in some intermittent fevers, and in some instances its recurrence is so frequent as to become a real disease. It is generally supposed to be occasioned by some obstruction in the pulmonary circulation, and may frequently be got rid of by a deep inspiration.

Yawn'ingly, *adv.* In a yawning manner.

Yazoo', a river of *Mississippi*, formed by the junction of the Tallahatchie and Yallobusha rivers at Laflore, in Carroll co., and flowing into the Mississippi 12 m. above Vicksburg, after a S.W. course of 290 m. It is navigable to its source.—A W. central co.; *area*, 1,020 sq. m. *Rivers.* Big Black and Yazoo. *Surface*, level; *soil*, very fertile. *Products.* Cotton, corn, &c. *Cap.* Yazoo City. *Pop.* (1897) 39,360.

Yazoo' City, a post-town, cap. of the above co., 50 m. N.N.W. of Jackson. *Pop.* (1897) 3,690.

Ybicuy, (*e-be-kwee',*) a river of Uruguay, rises on the Brazilian frontier, and joins the Paraguay River opposite Yapegu, after a W. course of 200 m.

Ycacos, (Cape,) (*e-ka'coce,*) a headland of N. Cuba, on the N E. of the Bay of Matanzas; Lat. 32° 9′ N., Lon. 81° 10 W.

Ye, *pron.* [A. S. *ge.*] The nominative plural of the second person, of which *thou* is the singular.

Yea, (*yā,*) *adv.* [A.S. *gea, geac.*] Yes; a word that expresses affirmation or assent;—used only in the sacred and solemn style.

—*n.* An affirmative vote; one who votes in the affirmative.

Yeas and nays. The list of members of a legislative body voting in the affirmative and negative of a proposition.

Yean, *v. n.* [A.S. *eanian.*] To bring forth young, as a sheep; to lamb.

Yean'ling, *n.* The young of a sheep; a lamb. (R.)

Year, (*yēr,*) *n.* [A. S *year.*] That period comprised in the revolution of the earth around the sun. In ancient times, when it was believed that the sun moved about the earth, this period was termed the *solar year*. Accepting the authority of Herodotus, the Egyptians were the first who ascertained the length of the solar year. They divided it into 12 months, each consisting of 30 days. The Greeks more accurately divided the year into 365¼ days, and the Grecian astronomer Sosigines made this the foundation of the Julian calendar. The *sidereal year* is the period required by the sun to move from a given star to the same star again. It is one of the most invariable quantities that nature presents us with, and has a mean value of 365 days, 6 hours, 9 minutes, 9·6 seconds. The time which elapses between the earth's arrival at its perihelion and its return to the same position, is known as the *anomalistic year*, and is equivalent to 365 days, 6 h., 13 min., 49·3 sec. See CALENDAR.

—*pl.* Sometimes equivalent to age or old age.

Year'-book, *n.* (*Eng. Law.*) One of the books of reports of cases in a regular series from the reign of Edward II., inclusive, to the time of Henry VIII., which were taken by the prothonotaries or chief scribes of the courts, at the expense of the crown, and published annually.

Year'ling, *n.* A young beast one year old, or in the second year of his age.

—*a.* Being a year old.

Year'ly, *a.* Happening occurring, or coming every year; annual; lasting a year; comprehending a year.

—*adv.* Once a year; annually.

Yearn, (*yērn,*) *v. n.* [A.S. *geornian*, from *georn*, eager.] To desire with eagerness, longing, and uneasiness; to feel great uneasiness from longing, tenderness, or pity; to long: to feel an earnest desire.

Yearn'ing, *a.* Longing; having a longing desire.

—*n.* Strong emotions of desire, tenderness, or pity; state of being moved with tenderness, pity, or longing desire.

Yearn'ingly, *adv.* In a yearning manner; with yearning.

Yeast, (*yeest,*) *n.* [A.S. and Du. *gist*; L. Ger. *güscht.*] (*Chem.*) The peculiar substance produced during the vinous fermentation of vegetable juices and decoctions, rising partly to the surface in the form of a frothy, flocculent, and somewhat viscid matter, insoluble in water and alcohol, and gradually putrefying in a warm atmosphere. It excites fermentation, and accelerates the process when added to saccharine and mucilaginous liquors. The nature of yeast, and the part which it plays in the process of vinous fermentation, have given rise to much theoretical discussion, and to many valuable investigations, but they are still very imperfectly known. The yeast-plant seems to be closely connected with the vinegar-plant and several similar forms of fungi, which produce fermentation, if not precisely identical with them. The yeast or *leaven* was employed in the manufacture of bread so early as B. C. 1897. (*Gen.* xix. 3.) The absence of leaven constituted the peculiarity of the bread used in the passover, B. C. 1491 (*Exod.* xii. 15).

Yeast'-plant, *n.* (*Bot.*) See PENICILLIUM.

Yeast'y, *a.* Like yeast; containing yeast; foamy; spumy.

Yedo, ("River-door.") The city of Yedo was founded by Iyeyasu, the first Shogun of the Tokugawa line, in A. D. 1600, though as early as the fourteenth century a castle existed on the present site of the city. In 1868, the Mikado took up his residence in Yedo, changing its name to Tokio ("Eastern capital"), and locating the seat of government here. The name Tokio is now universally used by the Japanese, "Yedo" being heard only in the mouths of foreigners. The city lies on both sides of the Sumida River and on the Bay of Yedo, in Lat. 35° 40′ N., Lon. 139° 40′ E. The castle or fortified enceinte occupies several square miles of area in the center of the city, while the entire surface of Tokio covers about 100 sq. m. *Pop.* (1897) 1,410,350. Since the great fires in 1872, 1876, and 1880, it has been largely rebuilt of stone and brick, and many of the new govt. buildings, barracks, colleges, etc, are very neat and handsome. The main street for nearly two miles is lined with fine brick buildings used as stores. The noted bridges, Shim, Kio, Nihon, and Yorodzu Yo Bashi are crossed by this bustling avenue of gay shops, which make it the Broadway of Japan. A large number of gardens, parks, mulberry and tea plantations, the castle groves, moats, and banks, give Tokio the appearance of a great *rus urba*. In general, however, the houses are of wood, one-storied, and mean in appearance. Tokio is now the educational, literary, military, naval, art, and fashion centre and capital of Japan, as well as the political seat of power.—*Yokohama*, distant by railway about 17½ m., is the sea-port of Tokio. It is a splendid foreign city, having most of the features of a European city, its streets being paved and lighted with gas.—The Bay of Yedo is an inlet of the N. Pacific, on the S.E. coast of the main island, and lies between 35° and 35° 40′ N., and intersected by the 140th meridian of E. Lon. The depth of the water, nowhere great, decreases all along the banks toward the city.

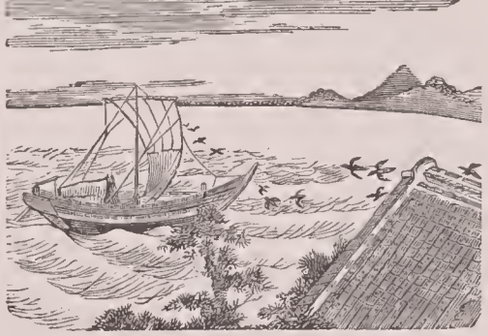

Fig. 2635.—A JUNK IN THE BAY OF YEDDO.
(From a native drawing.—*Oliphant's Japan.*)

Yeka'terinburg. See EKATERINBURG.

Yelk, *n.* Same as YOLK, *q. v.*

Yell, (*yel,*) *v. n.* [A.S. *gyllan, giellan.*] To make a loud, harsh noise with the voice; to cry out with a hideous noise; to cry or scream, as with agony or horror.

—*v. a.* To utter with a yell.

—*n.* A sharp, loud, hideous outcry; a scream or cry of horror.

Yell, or ZELL, one of the most northerly of the Shetland Islands, Scotland; *area*, 94 sq. m.

Yell, in *Arkansas*, a W. central co.; *area*, 936 sq. m. *Rivers.* Arkansas, Fourche La Fave, and Petit Jean. *Surface*, diversified; *soil*, fertile. *Caps.* Dauville and Dardanelles. *Pop.* (1897) 21,390.

Yell, in *Iowa*, a township of Boone co.

Yell'ing, *a.* Uttering hideous outcries; shrieking.

—*n.* The act of uttering hideous outcries; the act of screaming hideously.

Yellow, (*yel'lō,*) *a.* [A.S. *gealew*, yellow; It. *giallo*; Lat. *gilvus*, pale yellow.] Being of a bright gold-like color.

—*n.* A color of golden hue, and of many varieties. It is one of the seven so-called primary colors, and is complementary to blue, with which it forms white.

—*v. a.* To render yellow.

—*v. n.* To grow yellow.

Yellow, in *Iowa*, a twp. of Webster co.

Yellow-bird, or THISTLE-BIRD, *n.* (*Zoöl.*) A North-American bird of the genus *Chrysomitris*, family *Fringillidæ*, characterized by the bill nearly straight, and the tail quite deeply forked. The Yellow-bird, *C. tristis*, is 5¼ inches long, the wing 3 inches; the color gamboge-yellow, crown and wings black, tail and wings marked with white. The female is yellowish-brown, with no black upon the head. The nest is very handsome, made of lichens and fastened to a twig; eggs 4 to 6, white tinged with bluish, and spotted with reddish-brown at the larger end.

Yellow Bluff, in *Florida*, a township of Duval county.

Yellow Breeches Creek, in *Pennsylvania*, falls into the Susquehanna about 4 m. below Harrisburg.

Yellow Creek, in *Missouri*, rises in Sullivan co., and flowing S., enters Grand River on the W. of Chariton co.

Yellow Creek, in *Ohio*, enters the Ohio River from Jefferson co.

—A township of Columbiana co.

Yellow Creek, in *Pennsylvania*, unites with Black Lick Creek in Indiana co.

Yellow Copper-ore, *n.* (*Min.*) See COPPER-PYRITES.

Yellow Dye-tree, *n.* (*Bot.*) See CŒLOCLINE.

Yellow Earth, or YELLOW IRON-OCHRE, *n.* (*Min.*) A mixture of limonite (hydrated protoxide of iron) with hydrated silicate of alumina, found in various countries. It is often used as a coarse yellow pigment, and sold under the name of *Prussian red*, *English red*, &c. It is stated by Bunsen to be a valuable antidote to the poison of arsenic.

Yellow Fe'ver, or BLACK VOMIT, *n.* (*Med.*) An acute febrile disease, endemic on certain parts of the African coast, in the West India islands, and in tropical America, frequently making its appearance in New Orleans, Mobile, Charleston, and other cities of the southern parts of the United States. The disease is confined generally to towns situated on the sea-coast or on the banks of navigable rivers. A certain degree of heat seems to be necessary to its existence, the first frost putting an end to it. It seldom appears above the elevation of 2,500 feet above the level of the sea, depending in part on causes not yet known, but in circumstances favorable to its production, capable of being propagated by contagion. The most marked characteristics of this disease are a yellowness of the skin, general or partial, and the vomiting of a black or dark-colored fluid when about to terminate fatally: but these features are not always present. Otherwise it has the character of a common remittent fever. The mortality from this disease is always very great, more particularly among the young and robust; and hence it is very fatal among armies and navies. Its attack is sudden, but it is usually preceded by a feeling of weakness and restlessness, followed within a few hours with faintness, giddiness of the head, with a small degree of chilliness, and sometimes actual shivering. This is immediately succeeded by a high degree of fever, with great heat and strong beating in all the arteries of the body, particularly observable in the carotid and temporal arteries; flushings in the face, gaspings for cool air, white tongue, but tinged with yellow after the retchings have commenced; excessive thirst, redness, heaviness, and burning in the eyes; heaviness and darting pains in the head and small of the back, and often down the thighs; pulse quick, generally full and strong, but sometimes low and vacillating; skin hot and dry; sickness of stomach, followed by retchings, in which bilious matter is brought up; soreness and intense heat about the præcordia; anxiety, great restlessness, heavy respiration, sighing, scanty and deeply-colored urine. This is the first or inflammatory stage of the fever, and may continue from 24 to 48 or 60 hours. It is succeeded by a sudden abatement of most of the preceding symptoms, and sometimes there is a deceiving tranquillity. The retchings are still violent, but the pulse flags; the heat subsides, the skin is soft and clammy; the urine small in quantity, and of a dark croceous color; a yellow tinge is observed in the eyes, neck, and breast, which afterwards extends itself over the whole body; the tongue, in some cases, is dry, harsh, and discolored, in others furred and moist; there is confusion in the head, and sometimes delirium, with the eyes glassy This stage may continue from 12 to 48 hours, but never longer. In the third and last stage, the pulse sinks, and becomes unequal and intermittent. sometimes very quick; the vomiting is frequent, with great straining and noise, and latterly is of a dark and mucous-looking fluid, which has been called the *black vomit*. The countenance becomes more and more collapsed; the eye loses its full and prominent character; dark-colored blotches and petechiæ occur on the body: the exhalation becomes greater; the respiration hurried and noisy:

the surface and extremities cold and covered with a general clammy perspiration, till at length death supervenes. Sometimes the disease proceeds with fearful rapidity, and the patient is carried off in four-and-twenty hours. With respect to the treatment of this disease, much difference of opinion prevails. It may, however, be safely stated that the remedies should be directed to meet the particular forms of the disease — antiphlogistic in the inflammatory, and stimulant in the exhausted stages. Prof. Sanarelli, a bacteriologist of Montevideo, Uruguay, claimed in 1897 to have discovered the bacillus of yellow fever, and to have produced a curative serum. The important discovery has recently been made that the chief agent in transmitting the germs of *Y. F.* is the mosquito (*q. v.*). The knowledge of this fact has led to most important results in Havana and Santiago, Cuba, where by screening the hospitals against the entrance of mosquitos, *Y. F.*, once very prevalent, has been almost eradicated.

Yellow-ham'mer, or YELLOW-BUNTING, *n.* (*Zoöl. Emberiza citrinella*, a very common European bird of the fam. *Fringillidæ*. The male is known by the head, cheeks, front of the neck, belly, and tail-coverts being of a bright yellow; on the breast and sides reddish spots, which on the sides leave a black streak in the centre. Feathers of the top of the back, blackish in the middle, and reddish-brown on the sides; those on the rump, bright chestnut, terminated with grayish; tail-feathers blackish, the two lateral ones with a conical white spot on the inner barbs. Feet yellowish. The female is smaller than the male; and the yellow of the head, throat, and neck more thickly marked with the brown and olive spots with which those parts are sprinkled. Their food consists of grain, seeds, and insects.

Fig. 2636.
YELLOW-HAMMER,
(*Emberiza citrinella.*)

Yellow Knife, a river of British North America, enters the Great Slave Lake, after a S.W. course of 130 m.

Yellow-legs, *n.* (*Zoöl.*) *Gambetta flavipes*, a bird of eastern North America, family *Scolopacidæ*. It is about 10½ inches long, and 20 in extent of wings. The bill is 1½ inches, straight and slender; wings long and pointed, tail short, legs long, with lower half of tibiæ naked. The general color is ashy above, with many large arrow-heads and spots of brownish-black edged with ashy-white; rump and upper tail-coverts white, the latter barred with ashy-brown; lower parts white, with numerous marks on the neck and arrow-heads on the sides dark ashy-brown; bill greenish-black, and legs yellow. It is usually seen in the Eastern States in small flocks, wading in search of small fry, shrimps, worms, and aquatic insects, both in salt and fresh water. The nest is made among the grass on the edges of rivers and ponds; in autumn they get very fat, and are good eating.

Fig. 2637. — YELLOW-LEGS.
(*Gambetta flavipes.*)

Yel'lowness, *n.* The quality of being yellow.

Yellow Medicine River, in *Minnesota*, rises abt. Lat. 44° 30′ N., Lon. 96° 40′ W., and falls into the St. Peter's River abt. Lat. 44° 40′ N., Lon. 95° 26′ W., after an E.N.E. course of 100 m.

Yellow River, in *Georgia*, rises in Gwinnett co., and flowing S., enters the Ocmulgee a few miles S. of Covington.

Yellow River, in *Wisconsin*, rises near the E. border of Clark co., and flowing S., enters Wisconsin River at Germantown, in Juneau co.

Yellow Or'piment, *n.* (*Chem.*) Yellow arsenic or sulphuretted oxide of zinc, of a beautiful bright and pure yellow color, used as a pigment. In its native state it is used under the name of *Zarnic* or *Zarnich*, varying in color from warm yellow to greenish yellow. Orpiment, in all its varieties as a color, is subject to change and to be changed by all pigments containing oxygen; and if used must be employed alone.

Yellow-rat'tle, *n.* (*Bot.*) See RHINANTHUS.

Yel'low-root, *n.* (*Bot.*) See XANTHORIZA.

Yel'lows, *n. pl.* A disease in horses; the jaundice. — Also a disease fatal to peach-trees.

Yellow Sea, an inlet of the Pacific Ocean, in E. Asia. It opens northward into the gulfs of Leao-tong and Chi-li. It receives the Hoang-ho River, and all the chief rivers of Corea. Lat. bet. 32° and 45° N., Lon. bet. 120° and 127° E.

Yellow Springs, in *Iowa*, a village and twp. of Des Moines co., 15 m. N.W. of Burlington.

Yellow Springs, in *Ohio*, a post-village of Green co., 74 m. N.N.E. of Cincinnati; Lat. 39° 45′ N., Lon. 84° 15′ W. *Pop.* (1897) 1,450.

Yel'lowstone, a river of *Montana*, rises in the mountains of Wyoming, abt. Lat. 43° 40′ N., Lon. 110° W., and falls into the Missouri abt. Lat. 48° 5′ N., Lon. 104° W., after a N.E. course of 1,150 m., for 300 of which it is said to be navigable. It is the largest, though not the longest, tributary of the Missouri. See SECTION II.

Yel'low-throat, or MARYLAND YELLOW-THROAT, *n.* (*Zoöl.*) *Geothlypis trichos*, a very common North American bird of the family *Sylvicolidæ*. It is 5½ inches long, the wing 2·10; and is readily distinguished by a band of black on the forehead, cheeks, and ear-coverts. The female is without the black band. This warbler builds its nest upon the ground, and lays 4 to 6 white eggs speckled with light brown.

Yellow-weed, *n.* (*Bot.*) The Butter-cup, or Crowfoot, *Ranunculus acris*.

Yellow-water, a river of *Alabama*, rises in Covington co., and flowing S.W., enters Pensacola Bay, Florida.

Yelp, *v. n.* [A. S. *gilpan*, to glory, boast, from *gilp*, glory, boasting.] To bark, as a beagle-hound after his prey.

Yelp'ing, *n.* The repeated bark of a young dog, or the bark of a beagle after his prey.

Yem'en, a country of Arabia, which, in its wider sense, includes the whole S. and S.W. of that part of Asia, and then substantially the same country anciently called *Arabia Felix*, or the Happy (though by no means exempted from that curse of aridity under which Arabia generally suffers); — but, more strictly, the name of a province forming the S.W. corner of the peninsula, bounded N. by El Hejaz and Nedjed, E. by Hadramaut and the great Arabian desert, S. by the Gulf of Arden, and W. by the Red Sea. The plain of the Tehama, which forms a broad belt along the whole of the coast, consists almost entirely of a waste of unproductive sand. The Djebel, or mountainous district in the interior, presents, in many parts, a more agreeable aspect. Its lower declivities are covered with trees and aromatic shrubs; and the mountain-chains are divided by fine valleys, which, being watered by numerous streams, can be advantageously cultivated. — *Prod.* The grains chiefly raised are barley, millet, and dhourra; the supply of water being insufficient for the culture of rice. The most valuable and celebrated products, however, consist of the aromatic plants which grow upon the sides of the hills. The coffee of Yemen has always possessed a flavor which that of no other part of the world can rival. Europe, indeed, is now chiefly supplied from the West Indies; but, in the East, the coffee of Mocha is always eagerly sought after. The balm of Mecca, and the fragrant frankincense, are also the products of Yemen. — *Govt.* It is one of the few parts of Arabia which have been formed into a considerable and monarchical state, and is subject to a sovereign, who assumes the modest title of imam, or doctor, but exercises over his subjects an authority nearly absolute. The principal cities are, in the interior, Sana, Mocha, and Aden, the last now a British station. *Pop.* Unascertained.

Yenisei, (*yen'e-sai'e,*) one of the great rivers of N. Asia, in Siberia, rising in Mongolia, and, after a course estimated at 2,300 m., entering the Arctic Ocean 200 m. E. of the mouth of the Obi.

Yeniseisk, (*yen-e-seesk,*) a town of Asiatic Russia, cap. of a govt. of same name, 850 m. E. of Tobolsk; Lat. 58° 27′ N., Lon. 92° 16′ E. It is one of the most important towns of Siberia, the chief article of trade being furs. *Pop.* 6,824.

Ye'nite, *n.* (*Min.*) A brittle, black mineral, consisting chiefly of silica, sesquioxide of iron, protoxide of iron, and lime.

Yeoman, (*yo'man,*) *n.* [A. S. *gemæne*, common, from *gemana*, company.] In England, a common man; a man of small estate in land; a farmer; a gentleman farmer. — An upper servant in a nobleman's family.

(*Naut.*) An interior officer in a ship of war, under the boatswain, appointed to assist in attending to the boatswain's stores.

Yeomen of the Guard, a body-guard of the English sovereign, consisting of one hundred men.

Yeomandong' Monu'tains, a chain of Further India, separating the British prov. of Aracan eastward from Burmah. *Height*, between 2,000 and 8,000 feet.

Yeo'manly, *a.* Like a yeoman; pertaining to a yeoman.

Yeo'manry, *n.* The collective body of yeomen; the collective body of farmers.

Yeovil, (*yo'vil,*) a town and parish of England, in Somersetshire, 6 m. from Sherborne. *Manuf.* Woollen cloth and gloves. *Pop.* 7,957.

Yer'gas, *n.* A kind of coarse woollen wrapper made for horse-cloth.

Yerk, *v. a.* To jerk; to throw or thrust with a endden smart spring.

—*v. n.* To jerk; to move as with jerks.

—*n.* A sudden or quick thrust or motion. See JERK.

Yern. See YEARN.

Yer'-nut, *n.* A pig-nut; an earth-nut.

Yes, *adv.* [A. S. *gese, gea*; D. and Ger. *ja*.] Even so; expressing affirmation or consent; opposed to *no*

Yest (*yĕst*), *n.* Same as YEAST (*q. v.*).

Yeste (*e-ais'tai*), a town of Spain, 50 m. from Albacete. *Pop.* 6,409.

Yes'ter, *a.* [A. S. *gyrstan.*] Belonging or relating to the day before the present; last; last past; next before the present.

Yes'terday, *n.* [A. S. *gyrstan*, yester, and *dæg*, day.] The day before the present; the day last past.

Yes'ter-eve, Yes'ter-evening, *n.* The evening last past.

Yes'tern, *a.* [Ger. *gestern*, yesterday.] Of, or pertaining to, yesterday. (R.)

Yes'ternight, *n.* The night last past; last night.

—*adv.* On the night last past; last night.

Yes'ternoon, *n.* Noon of yesterday.

Yest'y, *a.* Frothy; yeasty.

Yet, *conj.* [A. S. *gyt, get.*] Notwithstanding, nevertheless; however.

—*adv.* Hitherto; still; noting extension or continuance; at the same time; beside; over and above; the state remaining the same; at this time; so soon; at least; at all; in a new degree; even; after all. — Also used as a kind of emphatical addition to a negative.

Yeu d'Isle, (*yoo'deel,*) a fortified island of France, dept. Vendée, 10 m. from the coast.

Yew, (*yu.*) *n.* [A. S. *iw*; Ger. *eibe*.] (*Bot.*) See TAXUS.

—*a.* Relating to yew-trees; made of the wood of the yew-tree.

—*v. n.* To rise in blisters, as scum or brine at salt-works

Yewen, (*yu'en,*) *a.* Made of the wood of the yew.

Yew'-tree, *n.* (*Bot.*) The YEW. See TAXUS.

Yeyd, or **Yezd,** (*yezd,*) a fortified city of Persia, in the province of Irak, on the frontier of Seistan. Being a great emporium of the trade between Hindostan, Bucharia, and Persia, it is large and flourishing, and is supposed to contain not less than 24,000 houses. *Manuf.* Silk stuffs, which are superior to any in Persia; velvets, cotton and woollen goods, arms, and loaf-sugar. Among the population are many Parsees, fire-worshippers, this being almost the only place in Persia they inhabit.

Yez'o, Ez'o, or (less correctly) **Yes'so,** the most northerly of the 4 principal islands of Japan, is separated from the main island by the Straits of Tsugaru, its size being about equal to that of Ireland. It is mountainous in the interior and has several active volcanoes. Coal is plentiful, the mines being worked by convict labor. Fish are abundant, enormous catches of salmon being made in the river Ishikari. It is thinly settled, and its interior is largely unexplored. The natives are an uncivilized people called Ainos (*q. v.*). Efforts are being made to settle and develop the country.

Yield, (*yeld,*) *v. a.* [A. S. *gyld*, payment, *gyldan*, to pay, give, render.] To pay; to render back; to give, as claimed of right; to produce, in general; to give in return for labor, or as profit; to afford; to exhibit; to allow; to concede; to admit to be true; to permit; to grant; to emit; to give up; to resign; to surrender.

—*v. n.* To give up the contest; to submit; to comply with; to give way; not to oppose; to give place, as inferior in rank or excellence.

—*n.* Amount yielded; product; return (applied particularly to products resulting from growth or cultivation.)

Yield'er, *n.* One who yields.

Yield'ing, *a.* Inclined to give way or comply; flexible; accommodating.

—*n.* Act of paying back or of producing; act of surrendering; submission.

Yield'ingly, *adv.* In a yielding manner; with compliance.

Yield'ingness, *n.* Disposition to yield or comply.

Ylo, or ILO, a seaport-town of Bolivia, at the month of the Ylo, in the Pacific; Lat. 17° 37′ S., Lon. 71° 23′ 45″ W.; *pop.* abt. 500.

Yo'cumtown, in *Pennsylvania*, a post-village of York co., 9 m. S.S.E. of Harrisburg.

Yo'der, in *Pennsylvania*, a township of Cambria county.

Yoke, (*yōk,*) *n.* [A. S. *geoc*; Gr. *zeugos*; Lat. *jugum.*] That which joins together; a piece of timber, hollowed or made curving near each end, and fitted with bows for receiving the necks of oxen, by which means two are connected for drawing. — A frame of wood fitted to a person's shoulders for carrying a pail, &c., suspended on each side. — A chain; a link; a band of connection. — A couple; a pair; as, a *yoke* of oxen. — A mark of servitude; service; slavery; bondage.

(*Hist.*) Yokes of iron are mentioned by Moses B. C. 1451 (Deut. xxviii. 48), and it is believed that such were actually used by slaves during the Scriptural period. The ancients regarded it as a symbol of slavery, and it was customary for vanquished armies to pass under a yoke, formed like a gallows, of two upright spears, and a third fixed transversely at top. The Samnites exacted this mark of submission from the Romans after their victory at the Caudine Forks, B. C. 321; and were themselves compelled to undergo the same humiliation B. C. 307 and B. C. 294.

—*v. a.* To put a yoke on; to join in a yoke; to couple; to join with another; to enslave; to bring into bondage; to restrain; to confine.

Yoke'-fellow, Yoke'-mate, *n.* An associate or companion; a mate; a fellow.

Yok'ing, *n.* The act of putting a yoke on; the act of joining or coupling; the harnessing of draught animals.

Yolk, *n.* [A. S. *geolca*, from *gelew.*] The yellow part of an egg. — The nucleous secretion from the skin of sheep, which renders the pile soft and pliable.

Yokoha'ma, the chief port of entry for Japan, is situated on the S. side of a bight of the Bay of Yedo, 17 m. from Tokio. When the country was opened to foreign commerce in 1854, it was a mere fishing village, but in 1859 was made the foreign mercantile settlement in Japan, and has since then grown with great rapidity, having now a population of over 150,000. The town is poorly laid out, with narrow and winding streets, but the Bluff, the foreign residence quarter, is a beautiful location, and commands a very attractive outlook over the bay. The largest foreign community in Japan is located here, and there is an active export trade of silk, tea, rice, and Japanese art objects. Exports about $50,000,000; imports, $25,000,000.

Yo'lo, in *California*, a central co.; *area*, 972 sq. m. *Rivers.* Sacramento and Puta; also, Cache creek. *Surface*, mountainous in the W., elsewhere level; *soil*, fertile. *Min.* Gold. *Cap.* Woodland. *Pop.* (1897) 13,450.

—A post-village of Yolo county, 5 miles northwest of Woodland.

You'der, *a.* [A. S. *geond*, through, over, as far as.] Being at a distance within view.
—*adv.* At a distance within view.

Youk'er, *n.* A young fellow; a youngster.

Youk'ers, in *New York*, formerly a city of Westchester co., on the Hudson river, joining New York city on the S., 16 m. N. of the City Hall; now included in New York city.

Yonne, (*yŏn,*) a dept. of the interior of France, in the ancient prov. of Burgundy, and situate nearly half-way between Paris and the frontier of Switzerland. *Area*, 2,864 sq. m. *Desc* Undulating, with rich pasture-lands. *Rivers.* The principal is the Yonne. *Clim.* Temperate, and of sufficient warmth for the vine. *Prod.* The usual cerealia, and large quantities of wine are made. *Min.* Lithographic stones and ochre. *Manuf.* Woollens, cottons, and beet-root sugar. *Pop.* 372,589.—Also a river rising in the dept. Nièvre, and, after a course of 150 m., joining the Seine at Montereau. It is connected with the Seine by the canal of Bourgogne, and with the Loire by that of Nivernais.

Yoosoofzyes, *n. pl.* An Afghan tribe. See AKBER.

Yore, *adv.* [A. S. *geara*, *gear*, a year.] In time past; long ago.

York, (HOUSE OF,) an English royal family, rival to that of Lancaster, and possessor of an older right to the crown. The first duke of York was Edmund Plantagenet, called also De Langley, fifth son of Edward III. His second son, Richard, earl of Cambridge, married Anne Mortimer, daughter of Roger, earl of March, and granddaughter of Lionel, duke of Clarence, the third son of Edward III. Upon the line of this king's eldest son becoming extinct in 1399, by the death of Richard II., the issue of Anne Mortimer inherited the true representation of Edward III. The rival house of Lancaster was descended from John of Gaunt, duke of Lancaster, and fourth son of Edward III. The house of York furnished three kings to the throne of England—Edward IV., Edward V., and Richard III. The house of Tudor, which supplanted it, was allied to it by the marriage of Henry Tudor, afterwards Henry VII., with Elizabeth, eldest daughter of Edward IV. In the struggle between the houses of York and Lancaster, the partisans of the former were distinguished by a white, and those of the latter by a red rose. Hence the title "Wars of the Roses."

York, (anc. *Eboracum,*) a city in the N. of England, cap. of a co. of same name, is situated on the rivers Foss and Ouse, and in point of rank, though not in commercial importance, is held as the second city of England, 22 m. from Leeds. It is the seat of an archbishopric, and a county by itself. It is entered by five principal gateways and five smaller ones. Of the five bridges of York, one alone crosses the river Ouse; the other four cross the Foss, and both rivers traverse the interior of the city. At the head of the public buildings is the cathedral, which is justly esteemed the glory of York This edifice belongs mostly to the 13th and 14th centuries, and is 542½ feet long, running from E. to W.; 222 broad internally, with a great tower 234 feet high. It has a magnificent W. front, flanked by two towers 196 feet high, and richly adorned within. *Manuf.* Carpets, woollens, linens, glass, paints, and paper-hangings. Before the Roman invasion, *Y.* was one of the chief towns of the Brigantes, the most powerful of the British tribes. The first English parliament was held at *Y.* in 1160 by Henry II.

York, in *Illinois*, a township of Carroll co.—A post-village and township of Clarke county, 22 miles southwest of Terre Haute.—A village of Crawford county, 142 m. east south-east of Springfield.—A post-township of Du Pago co.

York, in *Indiana*, a twp. of Benton co.
—A township of Dearborn county.—A township of Elkhart county.—A township of Noble county.—A township of Steuben county.—A township of Switzerland co.

York, in *Iowa*, a township of Tama co.

York, in *Maine*, a S.W. co., bordering on the Atlantic, and New Hampshire; *area*, 820 sq. m. *Rivers.* Ossipee, Saco, Salmon Falls, and York River. *Surface*, hilly; *soil*, fertile in the interior. It has several good harbors, and ship-building is extensively carried on. *Cap.* Alfred. *Pop.* (1897) 63,050.
—A post-village, township, and port of entry of the above co., on York river, 9 m. N.E. of Portsmouth.

York, in *Michigan*, a post-township of Washtenaw co.

York, in *Minnesota*, a post-township of Fillmore co.

York, in *Missouri*, a township of Putnam co.

York, in *Nebraska*, a S.E. central co.; *area*, 576 sq. m. It is drained by the Big Blue river. Its surface is undulating, and the soil generally fertile. *Cap.* York. *Pop.* (1897) 21,260.

York, in *New York*, a post-township of Livingston co., 6 m. N.W. of Genesee.

York, in *Ohio*, a township of Athens co.—A township of Belmont co.—A township of Darke co.—A township of Fulton co.—A township of Medina co.—A township of Morgan co.—A township of Sandusky co.—A township of Tuscarawas co.—A post-township of Union co.
—A township of Van Wert co.

York, in *Pennsylvania*, a S.S.E. co., bordering on Maryland; *area*, 925 sq. m. *Rivers.* Susquehanna; also, Codorus, Conewago, and Yellow Breeches creek. *Surface*, diversified; *soil*, generally fertile. *Pop.* (1897) 108,450.
—A flourishing city, cap. of the above co., 28 m. S.S.E. of Harrisburg; has very extensive industries. York was settled in 1741 and incorporated in 1787. The Continental Congress sat here from Sept. 30, 1777, to July, 1778. *Pop.* (1897) 24,180.

York, in *S. Carolina*, a N. co., bordering on N. Carolina; *area*, 750 sq. m. *Rivers.* Catawba and Broad; also, Allison's, Buffalo, King's, and Fishing creeks. *Surface*, hilly; *soil*, fertile. *Min.* Gold, iron, manganese, and limestone. *Cap.* Yorkville.

York, in prov. of Ontario, a central co.; *area*, 808 sq. m. *Rivers.* Don, Humber, and Rouge. *County-seat*, Toronto.

York, in *Virginia*, a river formed by the junction of the Mattapony and Pamunkey rivers, at the S.E. extremity of King William co. It falls into the Chesapeake Bay nearly opposite Cape Charles, after a S.E. course of 40 m.—A S.E. co., bordering on York River and the Chesapeake Bay; *area*, 70 sq. m. *Surface*, undulating; *soil*, fertile. *Cap.* Yorktown.

York, in *Wisconsin*, a post-township of Dane co., abt. 18 m. east north-east of Madison.—A township of Green co.

York, in British N. America, a fort on the W. coast of Hudson Bay, at the mouth of Hayes River; Lat. 57° N., Lon. 92° 26' W.

York Haven, in *Pennsylvania*, a village of York co., 16 m. S.E. of Harrisburg.

York Mills, in *New Jersey*, a village of Hunterdon co., 10 m. W.N.W. of Flemington.

York River, in *Maine*, an inlet of the Atlantic, in York co., 7 m. long.

York'shire, a northern co. of England, and the largest in Great Britain. Yorkshire has an area of 5,838 square miles, and is divided into three parts or ridings—north, east, and west. The North Riding is eighty-three miles in length by thirty-eight in width; has an area of 2,055 square miles, and is generally bleak and hilly. The East Riding has an area of 1,119 square miles, and consists of extensive wolds, chalk hills, and a great variety of scenery, and may be regarded as the very heart of the agricultural portion of the country. The West Riding has an area of 2,576 square miles, and consists of level, marshy and undulating lands. The dairy men of London are principally supplied with cows from *Y.*, and the hams from this co. have attained great celebrity. The chief rivers of *Y.* are the Swale, Tees, Derwent, Hull, Calder, Ribble, Ouse, and Don. The manufactures are broad and narrow cloths, shalloons, calimancoes, flannels, hosiery, and all kinds of worsted work, cutlery, and plated goods. *Cap.* York.

Yorkshire, in *New York*, a post-vill. and township of Cattaraugus co., 55 m. S.S.E. of Buffalo.

Yorkshire Grit, *n.* A name given to a stone used for polishing marble and copper-plates for engravers.

York Sulphur Springs, in *Pennsylvania*, a post-village of Adams co., 23 m. S.W. of Harrisburg.

Yorktown, in *Illinois*, a twp. of Henry co.

Yorktown, in *Indiana*, a post-village of Delaware co., 52 m. N.E. of Indianapolis.

York'town, in *New York*, a post-township of Westchester co., 45 m. N.E. of New York.

York'town, in *Virginia*, a port of entry and cap. of York co., on York River, 70 m. E.S.E. of Richmond. On Aug. 1, 1781, Lord Cornwallis established himself in *Y.*, with his whole army of abt. 8,000 men. In the latter part of September the combined American and French armies invested the town, strongly fortified by Cornwallis, and on Oct. 19, the British army, then reduced to abt. 7,000, surrendered to Washington as prisoners of war. *Y.* was a second time besieged by the National troops under Gen. McClellan, from April 5 to May 3, 1862, when the Confederates, abandoning their works, 71 heavy guns, and a large amount of ammunition, retreated to Richmond. *Y.* is noted for these two memorable sieges. In Oct., 1881, the centennial anniversary of the surrender of *Y.* was held here, Congress having made an especial appropriation and extended invitations to France and to the descendants of Lafayette, Rochambeau, Steuben, and other of our distinguished allies to participate.

York'ville, in *Ala.*, a vill. and twp. of Pickens co., 186 m. W.N.W. of Montgomery.—In *Ill.*, a p.-v. of Kendall co., 52 m. S.W. of Chicago.—In *Ind.*, a p.-v. of Dearborn co., 84 m. S.E. of Indianapolis.—In *S. C.*, a p.-v., cap of York dist., 86 m. N.W. of Columbia.—In prov. of Ontario, a village of York co., 2 m. N. of Toronto.—In *Wis.*, a post-vill. and twp. of Racine co.

Yosem'ite Val'ley. A mountain cleft or valley in Mariposa co., Cal., famous for its picturesque beauty and grandeur, on account of which it has been set aside as a perpetual park or reservation. It is situated on the W. slope of the Sierra Nevada Mountains, nearly midway between the N. and S. extremities of the State, and 140 m. nearly due E. from San Francisco. The valley, which is about 6 m. long and from ½ to 2 m. wide, is traversed by the Merced river, and embraces within its confines some of the most magnificent natural scenery of the world. Its sides are composed of lofty granite cliffs, almost vertical, and from 3,000 to 6,000 ft. high. Over these lofty walls streams of water flow at several points, forming in the season of rains and melting snows cataracts of unrivalled beauty. In the early spring, the rains give rise to minor streams and rivulets, which dart downward in lines of glancing light to the valley below, the whole combination of cascades and cataracts giving an indescribable charm to the scene. Trees in great variety adorn the floor of the valley, which during the proper season is carpeted with flowers of varied hue. To these elements of beauty needs to be added the stream that wanders down the center of the valley, its waters icy cold from their mountain source, and of crystal clearness. The Yosemite Valley was discovered by a party of hunters in 1851, during their pursuit of a band of predatory Indians who made it their stronghold. The reports of its remarkable beauty quickly brought tourists, and in 1864, Congress, in order to preserve it from the greed of speculators, took steps to set it aside as a permanent park, in common with the Mariposa Grove of giant trees, in its vicinity. These were granted to California on the express condition that they should be kept "for public use, resort, and recreation," and "be inalienable for all time." In passing up the valley from its outlet, the first of its grand features to be observed is the lofty cliff known as El Capitan, 3,300 feet high, which rises so vertically and stands out so prominently from the bounding cliffs as to make it the most imposing object in the valley. Opposite this stupendous cliff, as if placed there as a relief to its grandeur, descends one of the most beautiful of the cascades, the celebrated Bridal Veil Fall. This springs from the brow of a cliff 900 feet high, and descends in a broad sheet of tremulous spray, which dissolves into mist before reaching the bottom. On the other side, near the lower corner of El Capitan, the Virgin's Tears Fall descends in a beautiful cascade, 1,000 feet high, though it is only to be seen in the rainy season of the early spring. Cathedral Rock, 2,660 feet high, is the next object of interest, and beyond it are The Spires, two graceful granite columns which stand out partly isolated from the walls, like the towers of a Gothic cathedral. The succeeding attractions are the rocks known as the Three Brothers and Sentinel Rock, and opposite the latter the renowned Yosemite Falls, the most wonderful feature of the valley's scenery. This descends in all 2,660 feet, forming two cataracts and a series of cascades, the first fall being a sheer descent of 1,500 feet and the final one 400 feet. The stream is about 25 feet wide, and the cataract, during the season of rains, is unrivalled in height and beauty. At a short distance above Yosemite Falls an affluent enters the Merced, coming down a deep gorge known as Tenaya Cañon. Here are some of the most striking cliff effects of the valley, the most stupendous of them being a vast granite crest known as the Half Dome, 4,737 feet, or nearly a mile, in vertical height. Between this and the North Dome opposite lies an exquisite little pool known as Mirror Lake, which clearly reflects its gigantic surroundings. About two miles farther up the main valley ends, branching into two cañons, one traversed by the main stream, the other by an affluent. The Merced makes its way down the main cañon in two grand falls, and a series of rapids and cascades, which count among

Fig. 2638.—THE YOSEMITE VALLEY.

the leading attractions of the locality. The first reached, Vernal Fall, is a grand plunge of the whole stream, about 100 feet wide, down a vertical depth of 400 feet, the effect being one of great grandeur. For a mile above stretches a series of rapids and cascades of great beauty, the force of flow of the stream approaching that of the rapids at Niagara. These lead to the second cataract, Nevada Fall, which ranks with the greatest of waterfalls in height, volume and impressiveness, the descent being about 600 feet. Near the summit a rocky ledge throws a part of the water aside, giving it a peculiar twist which adds much to the scenic effect. Such are the principal features of this remarkable valley, whose variety and profusion of picturesque scenery stand unrivalled in the world. There are several points from which a general view of it may be attained, including Inspiration Point, at the entrance, and Moran's Point, from which the artist, Thomas Moran, sketched his celebrated picture of the valley. Scientists somewhat disagree as to the formative agencies of this great result of nature's architecture. Traces of glacial action are visible, and there are also indications of the work of earthquakes, while probably other agencies aided in the work. The whole locality is full of evidence of Titanic forces, and from the summit level a magnificent view of mountain and valley scenery is to be had.

You (*yŏ*), *pron.* [A. S. *thu*, *thou*; pl. nom. *ge*, accus. *eow.*] The nominative and objective plural of *thou*. Although strictly applicable only to two or more persons, it is commonly used when a single person is addressed, instead of *thou* and *thee*.

Youghal (*yo'al*), a seaport town of Ireland, in the co. of Cork, on the S. side of the Blackwater river, which forms its harbor, 26 m. from Cork. It is the seat of an export trade and has some potteries. *Pop.* 6,328.

Youghiogeny (*yo-ho-ga'nee*), a river which rises in Preston co., West Virginia, and flows into the Monongahela river, 15 m. S.E. of Pittsburg, after a N.N.W. course of 150 m.

Young, *a.* [A. S. *geong*; Lat. *juvenis.*] Being in the early part of life; not having been long born; not old; being in the first part of growth.—Ignorant, weak, or rather, having little experience.
—*n.* The offspring of an animal or animals; offspring.

Young, BRIGHAM, the president and prophet of the Mormons, born at Whittingham, Vermont, 1801. In

1832 he was made an elder of the Church of the Latter-day Saints, and began to preach at the Mormon settlement at Kirtland, O., and was appointed, in 1835, one of the twelve apostles of the Church. After the Mormons had been driven from Kirtland to Missouri, and from the latter to Illinois, and the murder of Joseph Smith by a mob (1844), *Y.* was chosen president in his place. The year following the charter of Nauvoo was repealed by the legislature of Illinois; and after a cannonade of three days the Mormons were driven from their capital and temple and led by President *Y.* to Utah, where they arrived, after a long and toilsome journey across the plains, July 24, 1847. At the establishment of the Territorial government in 1849, President Fillmore appointed Brigham *Y.* governor of the Territory. Next year the United States judges were driven away, the governor removed, and Colonel Steptoe appointed in his place; but on visiting Utah in 1854, he thought it an unsafe residence, and resigned; the Mormon president exercising supreme authority, and saying: "I am and will be governor, and no power can hinder it, until the Lord Almighty says: 'Brigham, you need not be governor any longer.'" A new governor, Cumming, was, however, appointed, and sent with a force of 2,500 U. S. troops to protect him and the Federal officers; but *Y.* forbade them to enter the Territory, cut off the supply-trains, while the troops were reduced to straits by being overtaken by snow in the mountains. A compromise was effected, and the troops remained until 1860. In 1871 he was indicted for practising polygamy, and placed under arrest by the Federal courts, but his trial never took place. *Y.* retained the presidency of the church until his death, Aug. 29, 1877. See MORMONS and UTAH.

Young, EDWARD, an English poet, born at the village of Upham, in Hampshire, 1684. He was educated at Winchester School and Oxford University, obtained a law fellowship at All Soul's College, and, in 1719, graduated D.C.L. He had before that time made himself known by the publication of several of his poems. *Y.* was ordained priest in 1727, and was appointed chaplain to the king, and three years later rector of Welwin in Hertfordshire. He continued to publish a succession of poems, each with a dedication to some influential person. He was named, in 1761, clerk of the closet to the princess dowager of Wales. *Y.*'s principal poetical work is the *Night Thoughts*, which appeared between 1742–46, and by reason of the seriousness of its subject —the immortality of the soul, and the practical duties which flow from that fact—and the force and showiness with which it is set forth, obtained an immense reputation, and long held its ground as a household book in England.

Young, SAMUEL B. M., general in U. S. army; was born in Pennsylvania, January 9, 1840; enlisted as private in 1861, and rose in rank during the Civil War to brevet brigadier-general. Entered regular army in 1866 as second lieutenant; became colonel of Third Cavalry in 1897; brigadier-general and major-general of volunteers in 1898, commanding an army corps in the war with Spain; subsequently served in the Philippines, becoming major-general in the regular army; on August 8, 1903, succeeded General Miles as lieutenant-general commanding, and on August 15 gave up this title to assume that of Chief of Staff under the new Army law. Retired January 9, 1901.

Young, in *Texas*, a N. co.; *area*, 900 sq. m. It is drained by Brazos river. *Surface*, diversified; *soil*, fertile. *Cap.* Graham. *Pop.* (1897) 6,250.

Young, THOMAS, an English philosopher, born at Milverton, Somersetshire, 1773. At the age of 19 he went to London as a student of medicine under his uncle, an eminent physician. He next studied at several of the German universities, and took his degree as doctor of medicine at Gottingen; but his uncle having left him $50,000, he did not actively pursue his profession. He subsequently became professor of Natural Philosophy at the Royal Institution, physician of St. George's Hospital, secretary to the Board of Longitude, and, finally, conductor of the "Nautical Almanac." He was the discoverer of the principle of interference in the undulatory theory of light, and, among other valuable works, produced *A Course of Lectures on Natural Philosophy and Mechanical Arts.* Died in 1829.

Young'ster, *n.* A young person; a youth.

Youngs'town, in *New York*, a post-village of Niagara co., 30 m. N.N.W. of Buffalo.

Youngstown, in *Ohio*, a thriving city, cap. of Mahoning co., on the Mahoning river, 135 m. N.E. of Columbus. *Pop.* (1897) 40,500.

Youngstown, in *Pennsylvania*, a post-borough of Westmoreland co., 11 m. E. of Greensburg.

Youngs'ville, in *Pennsylvania*, a post-borough of Warren co., 9 m. W. of Warren.

Young Wom'anstown, in *Pennsylvania*, the former name of MIFFLINBURG, in Clinton co.

Youuk'er, *n.* A youngster; a youth. (*Colloq.*)

Yount, in *California*, a township of Napa co. *Pop.* (1897) 2,790.

Your (*yure*), *a. pron.* [A. S. *eower*, gen. pl. of *thu*.] Belonging to you—equally applicable to both members.

Yours (*yorz*). The possessive pl. of *thou*.

Yourself', *pron.; pl.* YOURSELVES. A word added to *you*, to express distinction emphatically between you and other persons—used as the reciprocal pronoun.

Youth (*yüth*), *n.* [A. S. *geogvth*, *ingvth*.] The state of being young; the period during which one is young; the whole early part of life from infancy to manhood; the part of life that succeeds to childhood; a young man; young persons collectively.

Youth'ful, *a.* Full of youth; young; pertaining to the early part of life; suitable to the first part of life; fresh; vigorous, as in youth; proceeding from ungoverned impulse, as in youth.

Youth'fully, *adv.* In a youthful manner.

Youth'fulness, *n.* State or quality of being youthful.

Youth'hood, *n.* The state or the period of youth. (R.)

Ypres (*ee'pr*). [Flem. *Ypern.*] A fortified town of Belgium, in West Flanders, on the Yperles, 30 m. from Bruges. *Manuf.* Linen, lace, cotton, thread, and silk. *Pop.* 17,390.

Ypres'-lace, *n.* The finest and most expensive kind of Valenciennes lace.

Ypsilanti (*ip-se-lan'tee*), in *Michigan*, a flourishing city of Washtenaw co., 30 m. S. W. of Detroit. *Pop.* (1894) 6,111.

Yreka, in *California*, a city, cap. of Siskiyou co., 125 m. N. of Red Bluff. *Pop.* (1897) 1,450.

Yrieix (*e-re-ai'*), **St.,** a town of France, dept. of Haute-Vienne, on the Loue, 22 m. from Limoges. *Manuf.* Linens, druggets, flannels, porcelain, &c. *Pop.* 8,171.

Yssengeaux (*is-sen-zo'*), a town of France, dept. Haute-Loire, 14 m. from Le Puy. *Manuf.* Lace and ribbons. *Pop.* 8,360.

Ystad (*u(r)-stat'*), a town of Sweden, on the Baltic, 46 m. from Christianstadt. It has a spacious harbor. *Manuf.* Woollens, tobacco, &c. *Pop.* 4,500.

Yt'tria, *n.* (*Chem.*) See YTTRIUM.

Yt'trium, *n.* (*Chem.*) One of the rare metals. Its oxide *yttria* (Y_2O_3), was discovered in 1794. In a mineral found at Ytterby, in Sweden. The metal was first obtained by Wöhler in 1828. It occurs as a blackish gray powder, with no very distinctive properties. It has since been found in other minerals, associated with several other rare metals, Texas being one of its principal sources. *Sym.* Y. *Atom. wt.* 89.

Yttroce'rite, *n.* (*Min.*) A native sesquifluoride of cerium, with fluoride of yttrium and fluoride of calcium (Fluor-spar), from Finby, in Sweden.

Yttrotan'talite, *n.* (*Min.*) A mineral from Ytterby, in Sweden, composed chiefly of Yttria and Tantalum.

Yuba, in *California*, a river formed by the junction of the N., Middle and S. Yuba, at the base of Sierra Nevada in Yuba co., and flowing S.W., falls into Feather river near Marysville.—A N. co.; *area*, 750 sq. m. *Rivers.* Feather, Bear, Yuba, and the N. Branch of the latter. *Surface*, mountainous in the E., and level in the W.; *soil*, fertile in the level country. *Min.* Gold and quicksilver. *Cap.* Marysville. *Pop.* (1897) 11,450.

Yu'ba City, in *California*, a post-village, cap. of Sutter co., on Feather river, opposite Marysville. *Pop.* (1897) 580.

Yuba City, in *Idaho*, a village of Elmore co.

Yucatan', the most easterly State of Mexico; *Lat.* nearly between 17° 30′ and 20° 30′ N., *Lon.* between 87° and 91° W. It is in the form of a peninsula, jutting out into the Gulf of Mexico from the mainland of the isthmus, and has, on the N.W., the waters of the Mexican Gulf, the bay or gulf of Honduras on the S.E., the prov. of Vera Cruz on the S.W., and Vera-Paz, in Guatemala, on the S. Here it is connected with the continent by an isthmus of about 120 m. in breadth; *area*, from 50,000 to 80,000 sq. m. The surface is fertile and level, but deficient in regular supplies of water. *Prod.* Corn, maize, indigo, cotton, pepper, sugar-cane, and dye-woods. Abundant and interesting ruins, found at Uxmal, Chichen, &c., prove that a higher civilization was possessed by the race who originally inhabited *Y.* *Cap.* Campeachy. *Pop.* (1897) 282,636.

Yucatan, in *Minnesota*, a post-township of Houston co., about 22 m. S. of Winona.

Yucatan, Chan'nel of, that portion of the sea between Yucatan and Cuba, 120 m. in width.

Yue'ca, *n.* (*Bot.*) A genus of plants, order *Liliaceæ*, popularly known under the names of Adam's Needle, Spanish-Bayonet, or Silk-grass. The species sometimes assume an arborescent habit, producing a crown of linear-lanceolate, more or less rigid leaves, and from the center of each crown a tall erect panicle of showy whitish flowers. They are chiefly found in the West Indies and in Mexico. They are very handsome garden-plants, most of them nearly or quite hardy. In *Y. gloriosa* (Fig. 2639), the crown of leaves becomes elevated on a stout stem, and the panicle is three feet or more in length, branching out on every side.

Fig. 2639.—YUCCA GLORIOSA.

Yu'eu-Yang', a city of China, in Hoo-pe, 580 m. from Pekin; *Lat.* 32° 50′ N., *Lon.* 110° 29′ E.

Yug, *n.* (*Hindoo Myth.*) One of the four eras or periods into which the Hindoos divide the duration of the world. They extend over millions of years.

Yu-ho (*yoo-ho*). The grand canal of China.

Yukon, a river of Alaska, about 2,000 m. in length and navigable for 1,500 m. At its mouth, and intervening deltas, it is 70 m. wide. See page 3126.

Yu'ma, in *Arizona*, a S.W. co., bordering on California and Mexico. *Rivers.* Colorado, Gila, and Williams' Fork of the Colorado. *Surface*, mountainous; *soil*, generally sterile. *Min.* Gold and silver. *Cap.* Yuma.

Yu'ma, or **Yuna,** a river of Hayti, rises in the mountains of Cibao, and falls into the Atlantic by a broad estuary, after a general eastern course of 70 m.

Yuuk, *n.* (*Zoöl.*) A genus of birds, the WRYNECK (*q. v.*).

Yuu-Nau', a city of China, cap. of province of that name; *Lat.* 25° 6′ N., *Lon.* 102° 28′ E.

Yverdun (*e-vair-du(r)n*), a neatly built town of the Swiss canton of Vaud, at the S. extremity of the Lake of Neufchatel, 53 m. from Geneva. *Pop.* (1897) 4,000.

Yvetot (*eev'to*), a town of France, department Seine-Inférieure, 19 m. from Rouen. *Min.* Linen, muslins, &c. Once the cap. of a lordship, the chiefs of which were called kings of Yvetot—a distinction said to have been granted by Clotaire I. in 534; but this is not considered authentic. The title is believed to have originated in the 14th century.

Y.—SECTION II.

YALE — YELL

Yak'ima. In *Washington*, a S. co.; *area*, 5,760 sq. m.; named by Yakima river. *Surface*, partly mountainous, partly undulating; large forests. *Products*, Wheat, oats, hops, tobacco, fruits, wool, hay; live stock. *Cap.* North Yakima. *Pop.* (1897) 7,950.

Yale, Elihu, philanthropist, was born in Boston, Mass., April 5, 1648. His father was one of the original settlers of New Haven (1638), but returned to England in 1651; his family following soon after. Y., at the age of 22, went to India as a trader, and in 1687 he became governor of the East India Company's settlement at Madras, holding that post until 1692. He returned to England a wealthy man, in 1699. He never returned to America, but frequently proved his remembrance of his native town by gifts of money and books to the "Collegiate Schools," at Saybrook, Conn.; in 1745, the name of Yale College was given to the institution, in his honor. Died July 8, 1721.

Yale, Linus B., inventor of the "Yale lock," was born in Salisbury, N. Y., in 1821. In 1850 he devised a key for bankers' safes, involving a principle which soon marked him as an inventive genius. Died Dec. 24, 1868.

Yale Univer'sity. (*Educ.*) This institution, formerly known as Yale College, was authorized, in Jan., 1887, by the General Assembly of Connecticut, to call itself a university. It is the third institution of the kind in the United States, in point of age, its two predecessors being Harvard and William and Mary. The governor and lieutenant-governor of the State are members of the corporation, with whom were formerly associated six State senators, *ex officiis*. In 1871, however, the Assembly, with the assent of the corporation, substituted for the senators six graduates of the college, who were chosen, as their successors (one vacancy occurring annually) are also chosen, by the votes of a plurality of graduates of the first degree of five years' standing. Grouped under the name of Yale University are the department of philosophy and the arts (the academic department, or original Yale College, around which all the others have been developed), the department of theology, of law, and of medicine, the Sheffield Scientific School (see Technical Schools), the School of the Fine Arts, the musical department, and the post-graduate courses. Degrees in arts were first given in 1702, in medicine in 1814, in law in 1843, in philosophy in 1852, in theology in 1867, in fine arts in 1891, and in music in 1894. The course of study in the academical department (Yale College) extends through four years, and leads to the degree of bachelor of arts. The permanent funds of this department (exclusive of real estate, buildings, and apparatus devoted to academical uses) are about $1,500,000. There are nine dormitories, built from 1752 to 1894, and accommodating about 700 persons. A fine gymnasium, for the use of all the students of the university, was erected in 1893. There is also a well-laid-out athletic field, about a mile and a half west of the university buildings. The School of the Fine Arts was founded in 1864, by Augustus R. Street, of New Haven, who erected a building on the college square for its use and otherwise endowed it. Instruction is provided in drawing, painting, sculpture, architecture, and copper-plate etching. The degree of bachelor of arts is conferred on students who have fulfilled the requirements of an advanced course. The theological department was founded in 1822, in connection with the Congregational denomination, and provides a three years' course of study. There is also a graduate course of one year. There is no charge for instruction or for room-rent in the buildings belonging to the school. It is open on equal terms to students of every Christian denomination. The law department, begun in a private school in 1800, was not recognized as part of the college until 1824. For many years the school found quarters in the county court-house. It now occupies a building erected for it in 1895. The medical department was organized in 1813. It has a building of its own. The Peabody Museum of Natural History, devoted chiefly to zoology, geology, and mineralogy, was established by a gift of $150,000 from George Peabody, of London, in 1866. One wing of the proposed museum has been erected. The university possesses an excellent observatory. The University Library, open to students in all the departments, contains about 175,000 volumes, besides many thousands of unbound pamphlets. The total number of volumes in the several libraries of the university is about 240,000. In 1896 it had 234 instructors and 2,415 students. Its productive funds in that year were $3,821,875, and its revenues, exclusive of benefactions, $729,681.

Yamaga'ta, Aritomo, Marquis, a Japanese soldier and statesman, was born in the province of Choshu, in 1838; entered the military service, and took prominent part in the revolution of 1868; was steadily promoted in military and official life, as the reward of distinguished services. In the war with China (1894) he commanded the First Army Corps, and by his skill succeeded in expelling the Chinese from Corea within a few weeks. For this service he was created a marquis in 1895. He advocates the introduction of European methods as far as possible. In 1896 he attended the ceremonies at the coronation of the Czar, as the guest of the Russian Court, proceeding thence by way of the United States to Japan.

Ya'pok, *n.* (*Zoöl.*) A curious opossum (*Chironectes variegatus*) of Central America and Brazil, often called water-opossum, in reference to its aquatic habits. Unlike any other opossums, it has webbed feet, and it is so otter-like in its habits that it was long classed with carnivores. Its food consists of fishes, crustaceans and water-insects, and it lives in holes in the river banks. It is of small size and gray, with 4 or 5 sharply contrasted brown bands across its head and back.

Yates, Edmund Hodgson, journalist and novelist, was born in London, Eng., in July, 1831. He early began his career in journalism, becoming editor of *Temple Bar* and *Tinsley's Magazine;* theatrical critic of the *Daily News*, and a constant contributor to *All the Year Round*. He was also London correspondent of the New York *Herald* until 1874, when he devoted his energies to founding *The World*, a London "journal for men and women." This journal was eminently successful, and Y. continued to be the sole editor and proprietor during his life. In 1884 he was indicted for libel on complaint of the Earl of Lonsdale, and sentenced to two months' imprisonment. His novels are numerous, and many have been very popular. Died May 20, 1894.

Yates, Richard, "war governor" of Illinois, was born at Warsaw, Ky., Jan. 18, 1818; graduated at Illinois College, at Jacksonville (1838); practiced law in Springfield; was a member of the legislature (1842); elected to Congress (1850); governor (1860 and 1862). He was strongly opposed to slavery, and active in raising regiments of Union volunteers. He was elected to the U. S. Senate for one term (1865–71); was U. S. railroad commissioner at the time of his death, Nov. 27, 1873.

Yates Cen'ter, in *Kansas*, a city, cap. of Woodson co., 15 m. S.W. of Neosho Falls. *Pop.* (1895) 1,599.

Yclept', or **Ycleped',** *p.p.* of *clepe*, with prefix *y*. (*Obs.* or *Humor.*) Called; named.

Yel'low Med'icine, in *Minnesota*, a S.W. co.; *area*, 612 sq. m.; bounded N.E. by Minnesota river, and intersected by Lac-qui-parle river. *Surface*, undulating, chiefly prairie; not much timber; *soil*, fertile. *Cap.* Granite Falls. *Pop.* (1895) 12,581.

Yel'lowstone, in *Montana*, a S.E. co.; *area*, 3,105 sq. m.; drained by Yellowstone and Musselshell rivers. *Surface*, tablelands and valleys; *soil*, fertile in valleys with irrigation; valuable cattle ranges on the high lands; extensive beds of good coal. *Products*, Barley, wheat, potatoes, oats, hay, and wool. *Industries*, Cattle and sheep raising, and mining. *Cap.* Billings. *Pop.* (1897) 3,260.

Yellowstone Na'tional Park. Under this name a large tract of country in northwestern Wyoming, embracing the sources of the Yellowstone river, was set apart by Congress, in 1872, as a public park or pleasure-ground for the benefit and enjoyment of the people. The Act forbids any one to settle upon or enclose any part of the 3,575 acres of area thus set apart, and only such buildings can be erected upon it as the secretary of the interior, who has the exclusive control of the park, may deem conducive to the accommodation and comfort of visitors. This region had been vaguely known to the hunters and gold-seekers of Montana for several years previous to that time, but the geological and geographical survey made of it by Dr. F. V. Hayden, the U. S. geologist, in 1870, resulted in the first information to the public generally, and disclosed one of the foremost "wonderlands" of the globe—a region where mountain scenery culminates, and where the most powerful and splendid geysers and hot-springs of the world are gathered by thousands in the valleys. There are remnants of the volcanic period of formation here, which has left nine-tenths of the whole area covered with lavas or scoriæ of some form. The term Yellowstone Basin is sometimes applied to the entire valley; but the basin proper comprises only that portion enclosed within the remarkable ranges of mountains which give origin to the waters of the Yellowstone, south of Mount Washburne and the Grand Cañon. This basin is about 40 miles in length from north to south, and on an average 30 miles in width from east to west. It might be called the vast crater of an ancient volcano, made up of thousands of smaller rents and fissures, out of which the fluid interior of the earth, fragments of rocks, and volcanic dust have been erupted in unlimited quantities. Hundreds of the nuclei or cones of these volcanic rents are now remaining, some of them rising to a height of nearly 11,000 feet above the sea. Indeed, the hot springs and geysers of this region are only the closing stages of that wonderful period of volcanic action which began in Tertiary times. Yellowstone Lake is gradually, but very slowly, diminishing, Dr. Hayden finding old shore-lines on the mountains 500 feet above the present level of the surface.

Warm springs are not uncommon in the valley of the lower Yellowstone, but the temperature is seldom higher than 60° to 80°. It is not until we reach Gardiner's river, a small branch flowing into the Yellowstone on the left side, opposite the third cañon, that the true hot springs commence in their full force. About 3 miles above its junction with the Yellowstone, the valley bottom is covered with a thick calcareous crust, the deposits of hot springs which are now extinct, but flowing swiftly from beneath this crust is a stream of hot water 6 feet wide and 2 feet deep, with a temperature of 132°. A little distance farther up is a high hill, on the slope of which has been formed a system of terraces, each from 200 feet to 300 feet in height, and covered with a thick deposit of lime. On the ascent of the hill, about three-fourths of a mile from the river bottom, there is to be met with one of the most remarkable exhibitions of hot-spring deposits that is to be seen in this land of wonders. In the distance it looks like a vast glacier of snow and ice, on which account it has been named the White Mountain. Indeed, the different terraces can be compared, for their wonderful beauty, only to a frozen cascade. The remains of once-active springs are plainly visible; old chimneys, irregular openings, like entrances to caverns, which extend beneath the crust, are so numerous. This crust is probably from 20 feet to 50 feet in thickness, and underneath it is supposed that the surplus water from the active springs above flows down to the river. A little farther up is a series of basin-like pools, from 4 feet to 8 feet in diameter, and on a terrace about 200 feet farther still are numbers of active springs, with basins 20 feet to 50 feet in diameter, some of them with several centers of violent ebullition in the same basin. The temperature at the outflow varies from 150° to 162°. Upon the terrace, down about midway on the side of the mountain covered with this deposit, the principal active springs are now located, and here is presented to the eye another picture which transcends any description in words. The water is perfectly transparent, and down in the clear depths can be seen distinctly the minute ornament upon the inner sides of the basin; and the exquisite beauty of the coloring and the variety of forms baffle any attempt to portray them, either with pen or pencil: various shades of red, from the most brilliant scarlet to light purple; yellow from deep-bright sulphur, through all the shades, to light cream-color; and green of various shades. These springs also are full of a kind of vegetation, which, under the microscope, proves to be composed of diatoms. There are also in the quiet springs, and in the little springs that flow from the boiling springs, great quantities of a fibrous, silky substance, apparently vegetable, which vibrates at the slightest movement of the water, and has the appearance of the finest quality of cashmere wool. Carbonate of lime predominates in the deposits, and they may therefore be called calcareous springs.

There are two classes of springs in the Yellowstone valley: one in which lime predominates, and in the other silica. With the exception of the White Mountain spring in Gardiner's river, and one or two of not much importance, the other springs of the Yellowstone and Firehole basins are siliceous. They may be divided again into intermittent, boiling and spouting, and quiet springs. Those of the first class are always above boiling point during the period of action, but during the interval the temperature lowers to 150°.

Those of the second are always at the boiling point, and some of them throw the water up 2 to 6 feet by regular pulsations. The springs of the third class may once have been geysers, but are now quiet, and have a wide range of temperature, from 188° to 80°. Where the temperature is reduced below 140° great quantities of the sesquioxide of iron are deposited by the water, lining the inside of the funnel, and covering the surface where the water flows. Taken in the aggregate, these springs have been in constant operation during our present period, and Dr. Hayden estimated that, under favorable circumstances, at least 6 feet of this deposit have been precipitated within the space of one century.

Two remarkable groups of sulphur and mud springs deserve particular mention. The largest group is found on the east side of the Yellowstone, at Crater Hills, 8 miles below the lake. This district covers an area of about a mile square, and is sometimes called the "Seven Hills," from the fact that there are here several mounds of siliceous deposits from extinct springs, varying in height from 50 feet to 150 feet. The old craters of dead and dying springs, and the immense quantity of the siliceous deposits, show that the present active springs represent only the last stages of what must have been at some period in the past a magnificent group. There are still numerous steam-jets, one of which, on the east side, produces a sound like that of a locomotive, which can be heard for a long distance. The surface is fairly riddled with little steam vents, and the crust sends forth a hollow sound beneath the tread; and on removing this shelly covering at any point hot vapors come forth, while its under surface is incrusted with the most beautiful crystals of sulphur. The springs at this point are either boiling, mud, or quiet springs. The principal boiling spring, which is in a constant state of ebullition, sends up a column of water 2 feet to 4 feet; has a basin about 15 feet in diameter; and gives forth such a column of steam that it cannot be approached except on the windward side. But perhaps the most interesting objects here are the mud springs, which are of every size, from an inch in diameter to 20 feet. One of the largest is filled with fine light brown mud, which is in a constant state of agitation, the surface covered all over with puffs like hasty-pudding. Others send forth a thud-like noise every second, with an impulse at long intervals that throws the mud up several feet. The water in the vicinity, as well as the mud, seems to be thoroughly impregnated with alum. In an adjoining valley are little mud or turbid water-vents, which keep up a slumbering noise, showing the nature of the earth beneath the crust. Two miles above on the same side of the Yellowstone is the other group of springs similar to those just noticed. Besides these there are the geysers, to be alluded to presently. One of these is a true intermittent spring, and throws up a column of water 10 feet in diameter from 15 to 30 feet high. The crater becomes filled with boiling water; suddenly immense columns of steam shoot up with a rumbling noise, the water overflowing the basin, another column of water is thrown up for the space of 10 to 15 minutes, when it quiets down, and the basin is nearly empty. This operation seems to be performed about 8 times in 24 hours. Upon the side of the hill bordering the river is one of the most terrific mud-caldrons.

Leaving the Yellowstone Basin, and crossing in a westerly direction the rough and heavily timbered mountain range which divides the drainage of the Yellowstone and the Madison, we come into the great Geyser Basin of the Firehole river, a branch of the Madison Fork. In the distant view, the appearance of the whole country may be compared to a vast limekiln in full operation. The mountains that enclose the valley on either side are composed of basalt and obsidian. As we proceed down the valley, toward the junction of the East Fork with the Madison, the springs grow more abundant, and we soon come to the great basin of the Firehole, in which most powerful geysers are found. The entire valley, 3 miles in width, is covered with siliceous crust as white as snow. The elevated mounds and numerous columns of steam reveal where the most important groups of springs and vents are located. One of the most remarkable of the springs in this lower basin has built up for itself a cistern 150 feet in diameter. Near the center is the rim of the spring, about 25 feet in diameter; the water is in constant agitation, occasionally spouting up like an artificial fountain. The siliceous accumulation made by this spring descends for several hundred feet in innumerable semicircular steps varying from ¼ of an inch to 2 inches in height, and is exquisitely beautiful in all its details. When in active operation, a column of water is thrown 30 feet to 60 feet high, the water spreading over a radius of 50 feet, and filling the numerous reservoirs that surround the immense rim of the basin. There are other funnel-shaped basins with elegantly scalloped rims, covered all over the inner side to the depth of 10 feet to 20 feet with bead-like tubercles of silica. Sometimes these siliceous beads are arranged in large numbers like fungi or corals, or like the heads of cauliflowers. The Upper Geyser Basin is located very near the source of the Firehole river, and between it and the Lower Geyser Basin there is an interval of about 5 miles, in which the hills come close to the river on both sides, and the springs occur only in small groups.

Near the center of the upper basin, which is about two miles long and half a mile wide, there is one of the most powerful geysers of the basin. The preliminary warning is indicated by a tremendous rumbling, which shakes the ground all round with a sound like distant thunder; then an immense mass of steam bursts out of the crater as from an escape-pipe, followed by a column of water 8 feet in diameter, and rising by steady impulses to the height of 200 feet. Dr. Hayden compared the noise and excitement it produced to that of a battle-charge. The fountain continues to play for the space of 15 minutes, when the water gradually subsides and settles down in the crater about 2 feet, and the temperature slowly diminishes to 150°. There are here two separate basins, one of which is in a constant state of violent agitation, while the other plays only at intervals of 32 hours; and although, so far as the eye can detect, there is a partition of not more than 2 feet in thickness between them, neither of them seems to be affected by the operation of the other. The decorations about these springs are beautiful beyond conception; the most delicate embroidery could not rival them in their wonderful variety and complexity.

This noble pleasure-ground became at once an object of national interest, but for some years was almost inaccessible except by special expedition under military guard (against the Sioux Indians) from Bozeman, Montana. The completion of the Northern Pacific Railway through the valley of the Yellowstone in 1882, was followed by the building of a branch line about 50 miles in length from Livingston to Cinnabar on the northern border of the park, whence a line of stages was soon organized to carry tourists to the Mammoth Hot Springs, which is the headquarters for park visitors. Here improvements have been made under permission from and control of the government, until elegant hotel accommodations are now provided. A circuit of good roads has also been made, and a line of stages now run daily during the warm season around the line of objects of principal interest, at several of which small but comfortable hotels have been established. Saddle-horses may be hired, and camping-parties may make excursions and live under tents in remote parts of the park, under certain regulations designed to prevent any destruction or mutilation of timber or the natural curiosities, or the starting of fires or killing of game.

One of the foremost purposes of the park has been to form a preserve and natural breeding-place for wild game. The only remaining free herd of bison is harbored there, and numbers at present about 200. Elk, deer, antelope, and small animals are numerous and increasing. It must be remembered that the Grand Cañon, Yellowstone Falls, and Geyser Basins are all within a comparatively small space, and that three times that area remains which the ordinary tourist never sees. The control of the park is vested in the Department of the Interior. About 500 persons dwell there permanently, however, engaged about the hotels, stage-lines, &c., or in service of the government. These are citizens of Uinta county, Wyoming, and are under State laws made to supplement and still further enforce the regulations of the Federal government. In addition to the civil executive thus provided, the War Department furnishes a garrison of cavalry troops whose duty it is to patrol the park, protect the game from poachers (especially in winter), prevent prospecting the mountains for gold or silver, the thieving of timber, the incursions of wandering Indians, and other lawless acts. This service is excellently performed, and since it was begun many dangers that threatened this national pleasure-ground have ceased to menace its integrity and beauty.

Yerkes, CHARLES T., financier, born at Philadelphia, Pa., June 25, 1837. He became a broker in 1859, and later an agent for the sale of city bonds. He failed in 1871. Went to Chicago in 1881 and gradually gained general control of its street railway system. Later he became engaged in financing and building an electric subway system in London. Died Dec. 29, 1905. He gave to Chicago University the largest telescope in the world, and provided by will for a costly art gallery and a free hospital in New York.

Yg'drasil, *n.* In the Scandian mythology, the great world-tree, the tree of existence. It is an ash, whose three roots extend into the three principal worlds, and its branches spread over the universe.

Ylang'-ylang (*e-lang'-elang*), *n.* (*Perfum.*) The essential oil derived from the flowers of the ylang-ylang tree, *Cananga odorata*, order *Anonaceæ*. They are grown in the Philippine Islands, and exported for perfumers' uses.

Yoa'cum, or **Yoak'um,** in *Texas*, a N.W. co.; *area*, 840 sq. m. Unorganized.

Yo'del, or **Yo'dle,** *n.* A song or tune peculiar to the Swiss or Tyrolese mountaineers, in which they use meaningless syllables and make sudden changes in the tune, from the natural voice to the falsetto, and back.

Yonge, CHARLOTTE MARY, author, was born in England in 1823. She wrote many works of fiction, one of the most popular being *The Heir of Redclyffe*. Some of her stories are historical romances; others were written with the purpose of inculcating High-Church doctrine. Still others are juvenile in character.

York, GEORGE FREDERICK, DUKE OF, second son of the Prince and Princess of Wales, was born June 3, 1865; entered the British navy as a cadet (1877); went on a three-years' cruise around the world (1879), on board the *Bacchante*, and in 1891 was made commander. By the death of his brother, the Duke of Clarence, he became heir to the British throne, and was raised to the peerage as the Duke of York. On July 6, 1893, he married the Princess Mary Victoria of Teck.

York, in *Nebraska*, a city, cap. of York co., 50 m. W. of Lincoln; has large shipments of grain and cattle. Here is the United Brethren College of Nebraska. *Pop.* (1897) 4,160.

York'er, *n.* In cricket, a ball bowled so as to pitch very close to the bat.

You'mans, EDWARD LIVINGSTONE, scientist, was born in Coeymans, N. Y., June 3, 1821; studied medicine and chemistry, and occupied himself with the editing of instruction books in various departments of science. In 1872 he established the *Popular Science Monthly*, a journal that came to be regarded as headquarters for the latest scientific information, and which continued to manage as long as he lived. He also published several volumes. Died Jan. 18, 1887.

Young, CHARLES AUGUSTUS, astronomer, was born at Hanover, N. H., Dec. 12, 1834; graduated at Dartmouth (1853), and became professor of Mathematics at the Western Reserve College, in Ohio, where he remained from 1857 to 1866. He was called to the chair of Astronomy at Princeton in 1877. His principal work is *The Sun*, and he has also published a very popular *Manual of Astronomy* (1888).

Young, JOHN RUSSELL, journalist, was born in Downingtown, Pa., Nov. 20, 1841; educated in the public schools of Philadelphia, and the New Orleans high school. He began his journalistic work on the Philadelphia *Press*, and in 1861 was sent as correspondent to Virginia. In 1864 he accompanied the Red River Expedition; on his return to Philadelphia he was given editorial charge of the *Press*. In 1871 he went to Europe as a correspondent for the New York *Herald*. For the *Herald*, also, he went with General Grant around the world, and on his return was on the editorial staff of the *Herald*, and afterward published *Around the World with General Grant*. On March 15, 1882, he was appointed minister to China, and filled that mission until the change of administration, in 1885. In 1897 he was appointed Librarian of Congress. Died 1899.

Young Men's Christian Association. For two or three centuries there have been societies formed among young men for mutual help in living up to their ideals of Christian life, and for influencing those who had formed no such ideals. The Young Men's Christian Association, as it exists to-day, was not formed, however, until Mr. George Williams, of St. Paul's Churchyard, London, influenced twelve young men to meet on June 6, 1844, and found a society "for improving the spiritual condition of young men engaged in the drapery and other trades." In 1845 a course of lectures which lasted for twenty years was inaugurated by this society, and its field and its methods broadened until branches and similar associations had been formed in all Christian countries. Every Young Men's Christian Association now aims to own gymnasiums, libraries, amusement rooms, reading-rooms and class-rooms, besides its rooms for devotional meetings, and many of them have employment registers, restaurants, baths, or anything that the special conditions of a community may suggest as helpful to young men. The associations of the world are now allied, having formed a *General International Committee*, with offices at Geneva, Switzerland, and in the United States; there is also an *International Committee*, with offices in New York city; it acts as the general executive of the associations in North America.

In 1897 there were about 5,800 associations in the world, divided approximately as follows: In the U. S. and Canada, 1,500; in Europe, 4,000; in Asia, 225; other countries, 75. The total membership in the U. S. and Canada exceeds 270,000.

Young Wom'en's Christian Association. This society, with kindred aims to that of the Young Men's Christian Association, was founded in 1857. An *International Association* was formed in 1886, with a general office in Chicago, and a World's Young Women's Christian Association, with office in London, was founded in 1893. The Young Women's Christian Association gives special attention to receiving work for women and finding a market for the products of home workers. It also tries to provide Institutes, "homes," restaurants, and club-rooms, especially for working women. There were, in 1897, 1,340 associations in Great Britain, 20 in Europe, 20 in India, 25 in Australia, 345 in America, and 175 in other parts of the world, including China and Japan. Membership of American Association, 35,000.

Ysle'ta, in *Texas*, a post-town of El Paso co. *Pop.* (1897) 1,810.

Yuc'ca Fi'ber. (*Com.*) A coarse, harsh, fibrous material employed in the manufacture of cloth, cordage, mats, &c., obtained from the leaves of certain plants of the *Yucca* genus.—*Yucca* starch, a gelatinous substance obtained from the stems of the *Yucca gloriosa*, and manufactured in New Granada. See YUCCA.

Yu'kon, in *Oklahoma*, a post-village of Canadian co. *Pop.* (1897) 500.

Yu'kon Dis'trict and Riv'er. (*Geog.*) The term Yukon belongs (1) to a great river of Northwestern North America; and (2) to an unorganized political district of Canada embracing its upper part, and noted for its gold fields, especially those made famous in 1897 by discoveries in the Klondike Valley.

YUKON RIVER.—This, the largest river of North America, drains the northernmost western slope of the Rocky Mountains and eastern and northern slopes of the Coast Ranges, and flows northwest and west through southern-central Alaska to Bering Sea. From its ultimate sources to its mouth, the distance is about 2,100 miles, following all the windings of the river; but the name is now properly restricted to the main stream formed by, and extending below, the confluence of the Lewis and Pelly—a distance of 1,650 miles, as a boat

travels. Geographers are yet undecided what shall be regarded as the highest source of this great watercourse, as several of its headwaters have not been thoroughly explored; but the opinion prevails that it is found in a small lake on the Coast Range near the northern frontier of British Columbia and close to the sources of the North Fork of the Taku river. The outlet of this stream flows northwest some 65 miles to the head of the long and narrow A'Tlin Lake, which extends north about 45 miles and ends within half a day's journey by Indian carrying-trail of the head of Lake Marsh. From near the head of A'Tlin Lake a slow stream flows west some 7 miles to the head of the Tako Arm of Lake Tagish (see below), the head reservoir of the Lewis. Another affluent of the Tako Arm comes from Summit Lake, at the eastern foot of White Pass (*q. v.*). Another affluent of Tagish Lake rises in Crater Lake, at the eastern end of Chilkoot Pass (which leads across to Taiya Inlet, the head of Lynn Canal, Alaska coast), and soon expands into Lake Linderman, then descends by a short cataract into Lake Bennett, a narrow body of water between high hills, stretching northward for 25 miles, when it bends to the right through Lake Nares into the Windy Arm of Lake Tagish. Lake Tagish itself is a Y-shaped, elongated body of water, measuring about 30 miles, north and south from the head of Tako Arm to the outlet, and bordered by high limestone and sparsely wooded hills. Windy Arm is its eastern branch, and lies in the direct path of the prevailing indraught of air from the sea. The outlet is through a slack stream, 6 miles long, into Lake Marsh (or Mud Lake), which fills the northward-stretching valley with a shallow sea for 20 miles, curving eastwardly at its mouth, where the McClintock river enters from the east. Here the Lewis river may be said to begin, though miners have called the next section Fifty-mile river. It has a moderate current, suitable for boating, and abounds in salmon, which, however, do not ascend into Lake Marsh. Twenty-three miles down its valley has been disrupted by a small volcanic intrusion, through which the river has forced its way 2¾ miles in a gorge (Miles Cañon), succeeded by rapids (White Horse Rapids), where boats and cargoes must be carried around; a portage-railway is likely to be constructed in 1898 to avoid this, the only serious obstacle to boat navigation in the whole river.

Thirteen miles below these rapids the Tahkeena river (*q.v.*) enters from the eastward; and 11 miles farther the Lewis expands into Lake Labarge—this last-named lake is 31 miles in length—filling the continuation of the trough-like valley northward, and in places 6 miles wide. It is bordered by mountains of carboniferous limestone, with troughs between filled with cretaceous rocks, but large grassy spaces occur along the eastern shore. Below this lake the river (sometimes called Thirty-mile) is slow but very crooked for 27 miles, when it receives the large Teslintoo tributary from the southeast, which is likely soon to supersede the upper Lewis as a route of approach to the gold fields; it is wider than the Lewis at the junction, but carries far less water. From this confluence the course is north, through the crooked defiles of the Seminow hills. Several auriferous bars have been worked here, and some shore-placers. Thirty-one miles below the Teslintoo the Big Salmon enters from the southeast—an important river, yielding fine gold in many places.

Thirty-four miles below the Big Salmon, west-northwest, along a comparatively straight course, carries the boatman to the Little Salmon, or Daly, river, where the valley is so broad that no mountains are anywhere in sight, only lines of low hills at a distance from the banks. Five miles below this river the Lewis makes an abrupt turn to the southwest, and 18½ miles beyond that reaches the Nordenskjold, a small, swift, clear-watered tributary from the southwest. The rocks of all this part of the river show thin seams of coal, and gold has been found on several bars. The current now flows nearly due north, and a dozen miles below the Nordenskjold carries one to the second and last serious obstruction to navigation in the Rink Rapids, as Schwatka called them, or Five Fingers, as they are popularly known, referring to five large masses of rock that stand like towers in mid-channel. These and other islands shifting sand. The general course nearly to White river, 96 miles, is a little north of west, and many islands are seen; then the river turns to a nearly due north course, maintained as far as Fort Reliance. The White river (*q. v.*) is a turbid, powerful stream, and 10 miles below it there enters the smaller Stewart river (*q. v.*), the most important right-hand tributary between the Pelly and the Porcupine. The succeeding 125 miles holds what has lately become the most interesting and populous part of the Yukon Valley. The river here varies from one-half to three-quarters of a mile wide, rarely more shallow than three feet in any place, the bars being of gravel, and not inclined to shift greatly, and with a current of 5 to 7 miles per hour. About 23 miles below Stewart river Sixty-mile creek enters from the west; and 44 miles below it the mouth of the Klondike river, and Dawson City, the center of the Klondike region, to be hereafter described. Below this, the Chan-din-du on the east, and Forty-mile on the west are the principal tributaries before the great river passes from Canada into Alaska, near where the 65th parallel of latitude bisects the 141st meridian.

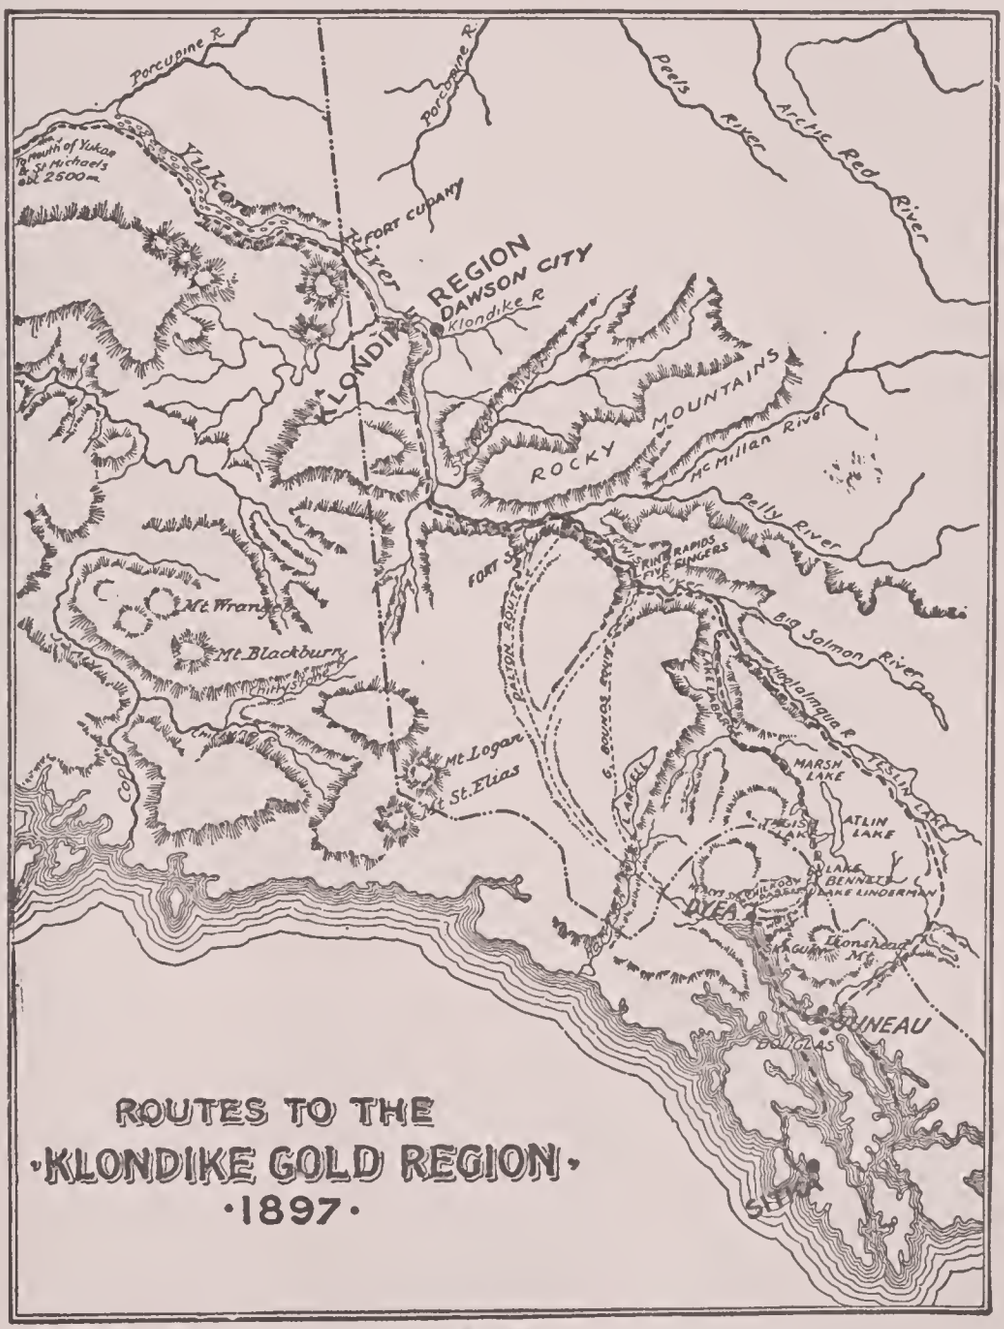

Fig. 3095.

The Yukon continues its northwestern course to just beyond the arctic circle, where it receives the large Porcupine river from the base of the Rocky Mountains eastward, and then turns southeast, spreading out in a low country among a maze of islands, escaping these soon to flow past a long line of precipitous hills, called the Ramparts. Here the large Tanana river (*q. v.*) enters from the southeast, and soon afterward the hills are left behind, and the river flows out upon the great marshy coast-plain of Alaska. At the 158th meridian, scarcely 100 miles inland from the head of Norton Sound, the river turns sharply southward and flows through the marshy plain for nearly 200 miles, when it turns again to the west and finds its way into Bering Sea through a delta over 60 miles in breadth. The main stream above the delta is 2 or 3 miles wide, but shallow and fluctuating; and of the many delta-channels forming a connected maze of waters through the tundra, only one—the northernmost—will float boats of even 6 or 7 feet draft; while the detritus brought down by the river and fanning out from its delta has filled up Norton Sound so that ocean vessels cannot approach within several miles of the shore, and the *entrépôt* of the Yukon is at St. Michael Island, 65 miles north of the delta. Thus, while the Yukon presents no obstruction to navigation of boats of, say, about 6 feet draft as far as Circle City, and those of half that draft may ascend its headwaters to the foot of the mountains with no hindrance, except at Miles Cañon, on the Lewis, only stern-wheel steamers are practically adapted to its navigation, and these can make use of the stream only a third of the year, since the ice rarely goes out before the 1st of June, and reforms about the middle of October.

Yukon District.—The basin of the Yukon includes all the interior region between the Coast Ranges, culminating in the St. Elias Alps (*q. v.*) and the Rocky Mountains, which separate it from the basin of the Mackenzie on the east, while its sources lie mainly on that Cassiar watershed, whose southward drainage is through the Taku, Stickeen, and Liard (Dease) rivers. This basin contains about 150,000 square miles in Canada and about 180,000 in Alaska; total, 330,000. The statement often heard that this Yukon is a greater

hack up the water and render its currents strong and turbulent, but will offer little opposition to a good steamboat. When the Little Rink Rapids, 6 miles below, have been passed, the valley broadens out, the current quiets down, and a pleasing landscape greets the eye as bend after bend is turned. A long wash bank on the northeast side is called Hoo-che-koo Bluff, and soon after passing it one finds himself in the midst of the pretty Ingersoll archipelago, where the river widens out and wanders among hundreds of islets. Fifty-five miles by the river below Rink Rapids, the confluence of the Lewis and Pelly is reached, and here the proper Yukon river begins. (See Pelly River.)

Below the junction, the Yukon averages about one-quarter of a mile in width, and has an average depth of about 10 feet, with a surface velocity of 4¾ miles an hour. A good many gravel bars occur, but no

river than the Mississippi (whose drainage area exceeds 1,225,000 square miles) is, therefore, a manifest exaggeration. In fact, the Yukon is exceeded in importance, measured by the area it drains and the water it discharges, by the Mackenzie, St. Lawrence, and Winnipeg-Nelson in America, and by several rivers of Siberia. Its nearest equals are the Indus and Danube. Its appearance of greatness is largely due to its shallow width; and its moderate outflow, relative to its area, is due to the comparative dryness of the climate of its upper valley, which is shielded from the ocean winds by very high mountains, which condense

Fig. 3096.—JUNEAU, LOOKING TOWARD CHILKOOT PASS.

the larger part of the moisture of the air before it passes beyond the coast ranges.

The climate of the interior is one of extreme rigor in winter, with a brief but relatively hot summer, and the great length of the days (the sun dropping below the horizon only about 4½ hours at the summer solstice in the Klondike Valley) gives a great many additional growing hours and makes out-door work possible nearly every hour of the twenty-four. The winter is correspondingly dark. The daily mean temperature from November to April, inclusive, falls below the freezing point, and the average for December, January and February is about 16 degrees below zero, with the mercury occasionally sinking to 70 or 80 degrees below zero. The continuity of the cold is the striking and exhausting feature, not its occasional maximum. The winter sets in early, and with great suddenness, the mountains beginning to show new snow and the passes to become obstructed in early September. The snowfall along the river itself is not very great, owing to the comparative dryness of the air. The warm weather follows the breaking of the winter in April and May with an equally surprising suddenness, and the land bursts into leaf in a few days. The ground remains permanently frozen, however, below some 18 inches, which is about as far as the roots can penetrate, and from the mouth of the Stewart down it is largely covered with moss, which must be cleared away before any planting can be attempted. On burned tracts hardy vegetables may be raised, and the area devoted to them is constantly increasing. Potatoes do well and barley will usually mature a fair crop. Extensive areas produce pasturage for cattle and natural hay, and it is only necessary to provide shelter and forage during the winter to keep live stock of all kinds. This enables mining prospectors to make use of pack horses and donkeys without other hindrance than from the excessive plague of mosquitoes and forest fires in mid-summer; and it is probable that horses will supersede dogs for winter travelling in the upper part of the valley. On the lower river, reindeer have already been introduced and bred, by aid of the U. S. Government, and these will gradually be trained for sledge-work. It may reasonably be expected, therefore, that in many ways the Yukon Valley will develop, as fast as settled, many means of supporting and comforting life not now possible. There is no more reason why men should not inhabit that region than stands in the way of human occupation of large portions of northern Europe and Asia, which have long been occupied by a civilized people.

The discovery and civilizing of the Yukon Valley are due in the first instance to the fur-traders. By the beginning of the 19th century the Russians in Alaska knew of a great river which the Eskimos about its mouth called Kwikhpak, Kwifpak, or Kwikhpak, as various English spellings represent it, but their traders were a long time in ascending it even to the first hills bounding the tundra, and never got much, if any, distance above the ramparts. Meanwhile, the Hudson Bay Company, having established itself thoroughly in the Mackenzie valley, began to push northwestward, and one of its foremost agents, Robert Campbell, began to explore the upper waters of the Liard. Pressing gradually onward, in 1840 Campbell crossed over the divide north of Lake Finlayson (at the head of the Frances), and discovered (at a place called Pelly Banks, where an Indian trading-post was immediately established and stood for many years) a large river, flowing northwest, which he named Pelly. At the same period another Hudson Bay man, James Bell, was guided by the Indians westward from the junction of the Mackenzie and Peel rivers up a river since called Bell's and over the Rocky Mountains to the head of the Porcupine, which Bell descended to its confluence with a great river which he called Yukon, after the Indians (Co-Yukons) whom he found dwelling on its banks. This was in 1842. In 1843 Campbell, having got the Pelly Banks post well started, built a boat, and floated down the Pelly until it joined with the Lewis river, which he did not ascend, but learned to be the highway of communication between the interior and the Pacific coast, which he was told could be reached over low passes. His commercial sense told him that this was the place for a new trading-post, but it was not until five years later (1848) that he was able to return and build Fort Selkirk, whose ruins may still be seen. The Pelly, Lewis, McMillan, Stewart, White, and other English or Scotch names upon the early maps of this upper part of the valley, were all given by Mr. Campbell in this or his following journey.

Fig. 3097.—RINK RAPIDS, OR THE FIVE FINGERS.

A year before that (1847), Bell's journey had borne similar fruit, in the establishment of a trading-post at the mouth of the Porcupine, called Fort Yukon, the site of which was long ago eaten away by the inroads of the current. The great river may thus be said to have been "discovered" at several points independently: by the Russians at the mouth, by the English at its middle and head, and none called it by the same name or were sure of its continuity. The Russians and the Fort Yukon people soon became acquainted, however, and traced the lower part of the river, and in 1850 Campbell came down from Fort Selkirk, and thus established the identity of the whole stream. Returning to Fort Selkirk, he had scarcely got that post well started when it was attacked by the coast Indians (Chilkats), who found that it was interfering with their monopoly of trade with the valley Indians, and burned to the ground, while Campbell and his men were bidden to depart, which they promptly did.

Between 1864 and 1867, surveys were made by the Western Union Telegraph Company for the building of a telegraph line through British Columbia, Alaska, and Siberia, for the purpose of connecting Europe with America overland; and a party under the charge of Wm. H. Dall examined with great care the lower Yukon, in 1866 and 1867, two men, Ketchum and Labarge, ascending the Lewis as far as Labarge Lake. Soon afterward the gold discoveries in the Cassiar district of northern British Columbia led to some prospecting northward, and miners in 1872 reached, but did not descend, the headwaters of the Yukon; but in 1883 Lieut. Frederick Schwatka, U. S. A., and Mr. Hayes, of the U. S. Geological Survey, made their way, with

Fig. 3098.—WHITE PASS.

Indian help, from Taku Inlet to Lake Tagish, and descended the Lewis on a raft to Fort Selkirk, studying the valley and giving names to its features, few, if any, of which have been adopted. From Fort Selkirk they struck across the mountains forming the divide between the Yukon, White, and Copper rivers, and by a pass only 5,000 feet in height descended to the Chityna, and thence along Copper river to the coast. Subsequently, explorations of this upper district were made by the Drs. Krause, E. J. Glave, Frank Dalton, and others, the most important of whom were Dr. G. W. Dawson and William Ogilvie, of the Geological Survey of Canada, who mapped and studied thoroughly the Pelly and Lewis valleys in 1886 and 1887.

The acquirement of Alaska by the U. S. led to a determination of the boundary where it crosses the valley on the 141st meridian, and some exploration of its lower part. In 1873 an independent trading company entered the district as a rival to the Hudson Bay Company, whose monopoly had ceased by arrangement with Canada in 1870; and steamboats began to run from the island-station, St. Michael, 65 miles north of the delta, to the trading-posts at Melato, New Fort Yukon, Fort Reliance, and others. It gradually became known, as seemed naturally probable from the prevalence of placer gold on the coast and in British Columbia, that the beds of streams flowing into the upper Yukon were auriferous; and by 1880 wandering gold hunters had struggled over the passes from Cassiar or from the coast and tried the gravel bars of the Lewis, Teslintoo, and tributary streams, finding profitable results at several places, to which men will prob-

apiy return in future. By 1884 a considerable number of miners began to use Chilkoot Pass, and more ascended and descended the river to and from St. Michael on the trading companies' steamboats. In 1885 they found gold in such quantities on the Stewart river that a "camp" was formed near its mouth and a trading-store opened. Probably $100,000 was taken out during the summers of 1885 and 1886. At the same time prospecting went on elsewhere, and in 1886 coarse gold was reported upon Forty-mile creek, and a local rush took place to its cañons, the principal attraction being Franklin Gulch, named after its discoverer. Three or four hundred men gathered there by the season of 1887, and all did well. A town of log houses was built, called Forty-mile, agents of the Alaska Commercial Company opened a big store, and a rival corporation, the North American Transportation and Trading Company, appeared and started another near by, called Fort Cudahy. About this time, also, the Canadian government sent a magistrate and a squad of the Northwest mounted police to represent its authority and legalize such mining claims and other transactions as took place on its side of the boundary. Forty-mile is a "bed-rock" creek—that is, one in the bed of which there is very little drift; and in many places the bed-rock was scraped with knives to get the little loose stuff out of crannies. Some nuggets were found. At its mouth are extensive bars along the Yukon, which carry gold throughout their depth. During 1887 the season was very unfavorable, and not much was accomplished. Sixty-mile creek was next brought to notice, and there Miller Gulch proved richer than usual; it is one of the headwaters of Sixty-mile, and some 70 miles from the mouth of the river, where, in 1892, a trading-store, saw-mill, and little wintering-town was begun. Miller creek is about 7 miles long, and its valley is filled with vast deposits of auriferous drift. In 1892 rich strikes were made, and 125 miners gathered there, paying $10 a day for help, and many making fortunes. One clean-up of 1,100 ounces was reported. Glacier creek, a neighboring stream, exhibited equal chances and drew many claimants, some of whom migrated thither in midwinter, drawing their sleds through the woods and rocks with the mercury 30 degrees below zero. All of these gulches and other golden headwaters on both Forty-mile and Sixty-mile creeks are in Alaska; but the mouths of the main streams are in Canadian territory. Birch creek was the next find of importance, and was promising enough to draw the larger portion of the valley population, which by this time had concentrated in this region, and had increased to perhaps 1,000 winter residents.

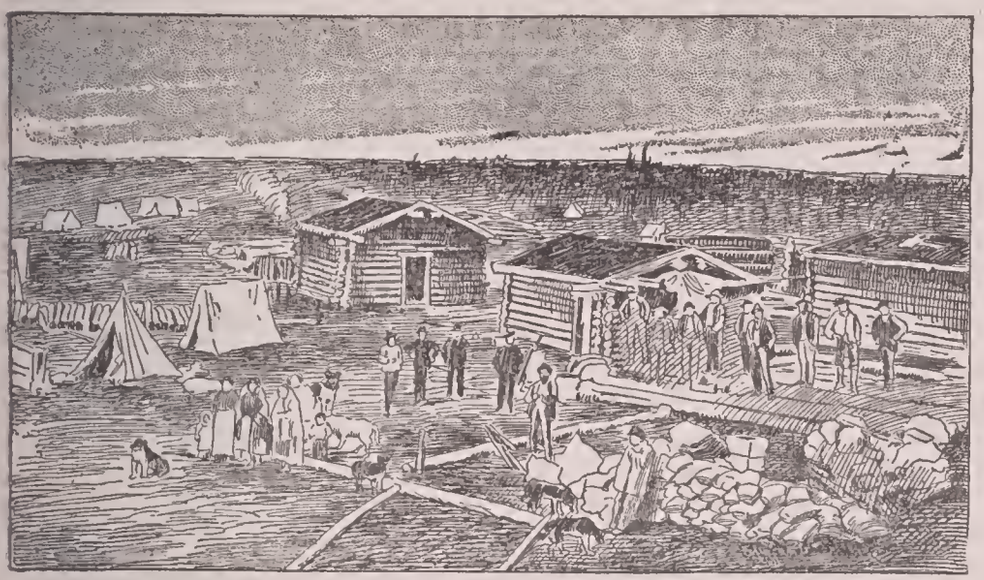

Fig 3099.—THE CIRCLE CITY SUPPLY-STATION.

Birch creek is really a large river rising in the Tanana Hills, just west of the boundary, and flowing northwest, parallel with the Yukon, to a debouchment some 20 miles west of Fort Yukon. Between the two rivers lie the "Yukon Flats," and at one point they are separated by only six miles. Here, at the Yukon end of the road, arose Circle City, so called from its proximity to the arctic circle. This became an orderly little town of regular streets, and had a recorder of claims, stores, theaters, &c. Birch creek has been thoroughly explored, and in 1894 yielded good results. The gold was in coarse flakes and nuggets, so that $40 a day was made by some men, while all did well. The drift is not as deep here as in most other streams, and water can be applied more easily and copiously—a vast advantage. Mammoth, Crooked, Independence, Mastodon, and Preacher creeks are the most noteworthy tributaries to this rich field, which was temporarily nearly deserted during the Klondike excitement of 1897, but will no doubt recover its place later. The Tanana, Koyukuk, and other rivers flowing into the lower Yukon have also been prospected and found to yield more or less placer gold, but their resources are not yet well understood.

The accounts of these gold discoveries were little noticed by the outside world until July, 1897, when a hand of miners arrived in San Francisco from the upper Yukon, bringing a large quantity of gold in nuggets and coarse flakes or "dust." A few days later another steamer brought over $1,000,000 more. Nearly all this was the result of a single winter's work in the valley of a small stream now known the world over as the Klondike, which entered the Yukon near Fort Reliance, or about 50 miles above Forty-mile creek; it is

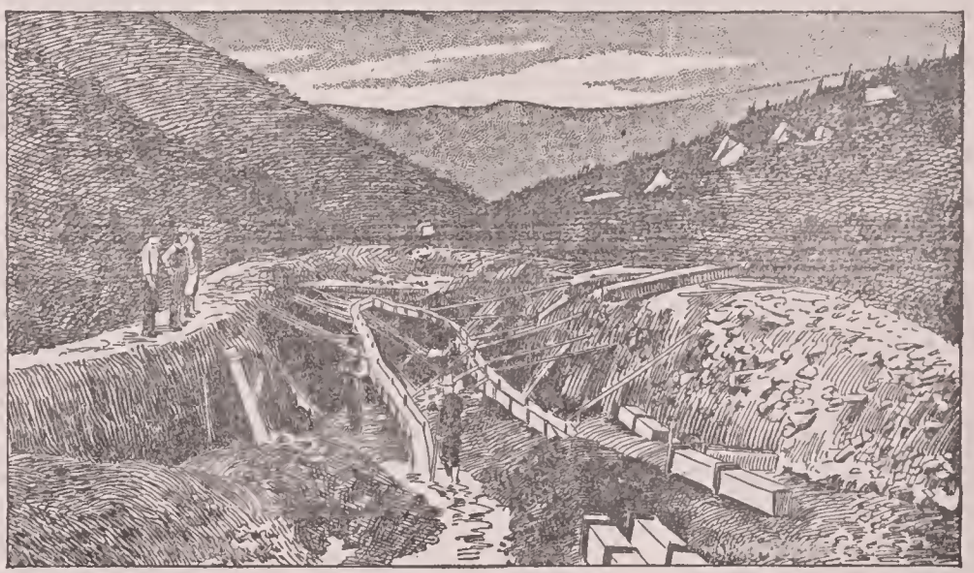

Fig. 3100.—A PLACER MINE ON MILLER'S CREEK.

Fig. 3101.—VIEW OF FORT WRANGELL.

1,500 from St. Michael, by ascending the river, or about 600 from Dyea or Skaguay, on the southern Alaskan coast, by way of Chilkoot or White Pass and down the Lewis and Yukon. This stream had been examined long before by prospectors (who knew it as Deer river, as well as by its Indian name, which is nearer Thlondac than Klondike), and had yielded nothing but moderate returns of "flour" gold; but in the autumn of 1896, along one of the lower southside branches of the stream, prospectors found pockets of flakes and nuggets of gold far richer than anything Alaska had ever shown before. They named the stream Bonanza, and a small tributary El Dorado. Others came, and nearly everyone succeeded. Before spring most of the population of the whole region had struggled in there, and nearly a ton and a half of gold had been taken from the frozen ground. Nuggets weighing a pound (troy) were found. A thousand dollars a day was sometimes saved despite the rudeness of the methods, but these things happened where pockets were struck. Probably the total clean-up from January to June was not less than $1,500,000. A village of log houses, with two trading stores, sprang up at the mouth of the Klondike, named Dawson City, after Dr. G. W. Dawson, which was a busy, orderly place, shut off from the world until navigation opened, when it had about 3,000 inhabitants, counting all those in that valley, and every other place was nearly deserted.

Hundreds of claims were staked out and worked in all the little gulches opening along Bonanza, El Dorado, Hunker, Bear, and other tributaries of the Klondike, and of Indian river, a stream thirty miles south of it, and a greater number seem to be of equal richness with those first worked. All this is within a radius south and east of 20 miles from Dawson City, and most of it far nearer. The country is rough, wooded hills, and the same trouble as to water is met there as else-

where, yet riches were obtained by many men in a few weeks without exhausting their claims.

The methods of placer-mining pursued in the Klondike region and elsewhere along the Yukon are different from those pursued elsewhere, owing to the fact that from a point about three feet below the surface the ground is permanently frozen. The early men tried to strip off the gravel down to the gold lying in its lower levels or beneath it, upon the bed rock, and found it exceedingly slow and laborious work; moreover, it was only during the short summer that any work could be done. Now the miners build fires over the area where they wish to work, and keep these lighted for twenty-four hours. Then the gravel will be melted and softened to a depth of perhaps six inches. This is then taken off and other fires are built until the gold-bearing layer is reached, usually at a depth of 15 feet. When the shaft is down that far other fires are built at the bottom, against the sides of the layer, and tunnels are made in the same manner, through the "pay-dirt" layer, which is about five feet thick. Blasting has no effect on the frozen earth. The material taken out is heaped up to wait until the coming of water in the spring with which to wash it in the rockers and sluices that alone serve the purpose there thus far. The tales of the extraordinary richness of these gravels, and the visible evidence of large amounts of money gained by individual and unskilled efforts, several men exceeding $50,000 as the result of the winter's work, from claims promising 10 or 100 times more, excited the imagination of the whole civilized world, and efforts were made at once by thousands of men and women in all parts of the U. S. and Canada to reach the new gold fields before the end of the summer. The scanty regular lines of transportation to Juneau and St. Michael were at once supplemented by special steamboats, and within a few weeks thousands of men and pack-animals, and many tons of equipments and provisions, were shipped to the north and landed at St. Michael Island, in Norton Sound, where they embarked on the existing river-boats for the long voyage up the Yukon, or put together new flat-bottom, stern-wheeled steamers, taken from San Francisco, Seattle, or Victoria in sections; or else put ashore at the head of Lynn Canal, where landings were extemporized—Dyea, at the entrance of the trail to Chilkoot Pass, and Skaguay at the entrance to White Pass. No proper roads or even pack-trails existed over these lofty and rough mountain passes, the only means of carriage being the lazy, capricious, and exorbitant Chilkat Indians, who were too few, at the best, to do all the work presented to them.

These passes were, however, only the beginning and worst of the many difficulties by this route, for when they had been passed and the navigable waters of the Lewis river reached at Lake Linderman the travellers had to build for themselves boats, and float successfully down 600 miles of riverways before they reached the treasureland of their admiration. As a consequence, a large proportion of those who started arrived too late at Dyea and Skaguay to get their goods across the passes and down the river before being stopped by snow and ice, and either passed an idle and miserable winter *en route* or returned to civilization. The widespread knowledge of these delays and difficulties incident to the sudden attempt to penetrate a total

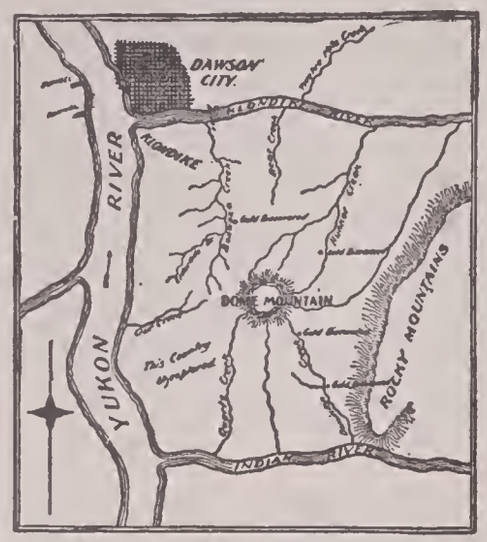

Fig. 3102.—DAWSON CITY GOLD FIELDS.

wilderness in an almost arctic climate, wisely deterred a great number from making the attempt before the spring of 1898, by which time, no doubt, greatly improved means of access will be provided.

It is probable that before the end of the century a narrow-gauge railway will be constructed through White Pass and down to Lake Bennett, where steamboats will run down to Miles Cañon, connecting by a portage-railway with steamboats on the lower river. Another railway is proposed from the mouth of Copper river, giving a short cut to the sea, but its feasibility has not been shown, and the expense of its construction would be enormous. A more practicable and probable railway entry will be that now under examination by the Canadian Pacific Company, which proposes to build a line from the head of navigation on the Stickeen river to Lake Teslin, whence steamboats run directly down the lake and Teslintoo and Lewis rivers to the Yukon.

Little trustworthy news came to the outer world from these mines during the summer of 1897, but it was understood that success was rewarding all intelligent work, and vague reports of an enlargement of the area of production and new discoveries elsewhere were received. It is believed by those best qualified to know that gold-placers will be found widely distributed along the course of the Yukon, and they are likely to consist of pockets of very rich places of small extent rather than large areas of gravel through which gold is evenly distributed.

The Canadian government has enacted a series of special laws to meet the exigencies of this new field, in which aliens form the principal part of the population, including very heavy fees and royalties. To enforce these laws and preserve order generally a large force of mounted police have been sent there, established in scattered fortified posts, whose commanders have magisterial powers. The United States, on the other hand, will establish a military post on the river near the international boundary for similar police duty. See ALASKA.

Yu'lan, *n.* (*Bot.*) A Chinese magnolia (*Magnolia conspicua*), 40 or 50 feet high, but cultivated in this country as a shrub. It has large, brilliant white flowers that appear in early spring before the leaves.

Yule, *n.* [Etym., doubtful.] The old English name for Christmas, or festal celebration beginning Christmas Eve, when the great *yule-log* was burned, being brought in and placed on the hearth with much ceremony, and the *yule-candle* was lighted, which must not go out during the evening lest evil should come to the house. It is of heathen origin, and among the Norsemen was a feast to Odin, in commemoration of the fiery sun-wheel at the winter solstice, the turning-point of the year. These northern people believed that for twelve days—from Dec. 25 to Jan. 6—they could trace on earth the movements and interferences of their gods. The introduction of Christianity modified the festivities, but did not entirely remove the relics of a former faith.

Yu'ma, in *Arizona*, a post-town, cap. of Yuma co., on Colorado river, on the Southern Pacific R.R., 250 m. S. E. of Los Angeles, Cal.; a trade center and shipping point. *Pop.* (1897) 2,265.

Yuma, in *Colorado*, a N.E. co.; *area*, 1,180 sq. m. *Surface*, rolling; *soil*, a sandy loam. *Cap.* Yuma. *Pop.* (1897) 2,840.

Z.

Z (*zed.*) the twenty-sixth and last letter of all modern languages, usually regarded as a double consonant, from its having the sound in some languages of *ts* or *ds*. It is a sibilant or hissing letter, and the only difference in pronunciation between it and *s* is, that the breath is emitted more forcibly in the case of the latter, —the organs of the mouth are in the same position in both cases. This letter is derived from the Greek, in which language it occupies the 6th place in the alphabet, and some have supposed that with them it had the sound of our *g*; as we find in the Scotch name Menzies, pronounced *Ming-es*. In German, the *z* has a compound sound, corresponding to our *ts*; and in Italian it is sounded sometimes like *ts*, sometimes like *ds*. In Spanish it has the sound of *th*; and in French, when sounded at all, like a forcible *s*. It interchanges with *d, g, i, j, s, t, y*. As a numeral it signifies 2,000, and with a dash over it, thus $\bar{Z}$, 2,000,000.

Zaandam, or SAARDAM, (*zan-dam'*,) a town of Holland, in North Holland, on the Zaan, near its junction with the *Y*, 5 m. from Amsterdam. It consists properly of two great valleys, called East and West Zaandam. In 1697, Peter the Great worked in one of the ship-building yards as a carpenter, and the house in which he lived is carefully preserved. *Pop.* 12,320, chiefly engaged in shipbuilding and sea-faring.

Zaca'pa, in Central America, a town of the state of Guatemala, 70 m. N.E. of Guatemala; *pop.* abt. 5,000.

Zacatu'la, a town of Mexico, on the Bolsas river, near its mouth in the Pacific, 180 m. W.N.W. of Acapulco.

Zac'cho, *n.* (*Arch.*) The lowest part of the pedestal of a column.

Zachariah (*zăk'a-rī'a*), a son of Jeroboam II., king of Israel, succeeded his father 773 B.C., but reigned only six months, having been assassinated by the usurper Shallum.

Zacualtipan (*sa-kwal-te-pan'*), a town of Mexico, 100 m. N.E. of the City of Mexico.

Zaf'fre, *n.* (*Chem.*) See COBALT.

Zain, *n.* A horse of a dark color, neither gray nor white, and having no spots.

Zaire. See CONGO.

Zalathna (*za-lat'na*), a town of Transylvania, in Lower Weissenburg. *Pop.* 4,416.

Zaleszczyki (*za'lesh-che'ke*), a town of Austrian Poland, on the Duiester, bordering on Moldavia. *Pop.* 6,000.

Zam'bo, *n.; pl.* ZAMBOS. The offspring of a negro and a mulatto; a sambo.

Za'mite, *n.* (*Pal.*) A name applied to fossil plants of the genus *Zamia*.

Zamora (*sha-mo'ra*), a town of Spain, cap. of a prov. of same name, near the Douro, 39 m. from Salamanca. *Manuf.* Serge, linen, gunpowder, &c. *Pop.* 11,000.

Zamora, in Mexico, a town of the State of Michoacan, 75 m. W.N.W. of Valladolid.

Zamose, or **Zamosz** (*za-mosh'*), a town in the S.E. of Poland, 51 m. from Lublin. *Pop.* 5,300.—In 1771, the Poles were defeated in its vicinity by the Russians.

Zane, in *Ohio*, a township of Logan co.

Zanesfield, in *Ohio*, a post-village of Logan co., 50 m. N.W. of Columbus.

Zanthoxyla'ceæ, *n. pl.* (*Bot.*) See XANTHOXYLACEÆ.

Zan'tiot, *n.* (*Geog.*) A native or an inhabitant of Zante.

Za'ny, *n.* [It. *zanni*, said to be a corruption in the Venetian dialect of *Giovanni*; Eng. *John*.] A merry andrew; a buffoon.

Za'nyism, *n.* The character or practice of a zany; buffoonery.

Zanzibar (*zăn'z'-bär*), a kingdom in East Africa, embracing up to 1886 the islands of Zanzibar, Pemba, Mafia, and Lamu, and a strip of coast 10 m. wide, extending from Cape Delgado, Lat. 10° 40′ S. to Kipini, Lat. 2° 40′ S. There were Arab settlements in Z. as early as the 10th century, and during the 17th century the imam of Muscat won most of the Portuguese dominions N. of Mozambique. Z. became practically independent of Muscat about 1856. In 1888 the mainland district S. of the Umba river became a German protectorate, and the British East Africa Company obtained control of the N. portion. In 1890 the British portion was extended to the river Juba and the islands were made a British protectorate, while Germany bought its portion of the mainland. In August, 1896, Said Khalid, a usurping sultan, was bombarded in his stronghold by a British fleet and was deposed. The island of Z., 625 sq. m. in area, has a population of 125,000, mainly in the town of Z., which is the only large town and trading post on the E. coast of Africa. It is the largest ivory market in the world. There is an excellent harbor, visited by numerous merchant vessels, the trade being considerable.

Zapara (*sa-pa'ra*), in South America, an island and castle of Venezuela, 18 m. N. of Maracaibo, opposite the mouth of Lake Maracaibo. The island is 12 m. long.

Zapato'sa, or **Zapatoza,** a lake of the Republic of Colombia, 35 m. S.E. of Mompox, 25 m. long and 22 broad.

Za'ra, the cap. of Austrian Dalmatia, on the shore of the Adriatic, 170 m. from Venice. It stands on a point of land which runs into the sea, and forms an excellent harbor, capable of containing a whole fleet. It is strongly fortified. *Manuf.* Silk fabrics. *Pop.* 9,063.

Zareba, (*Mil.*) a breastwork made of the prickly pear, piled up as a defence.

Zaslav, (*zas'laf,*) a town of Russian Poland, on the Gorin, 20 m. from Ostrog; *pop.* 8,500.

Zax, (*zaks,*) *n.* A tool for cutting slate.

Zayi, (*za'yee,*) a town of Yucatan, 70 m. S. of Merida.

Zbarasz, (*zba'rash,*) a town of Austrian Poland, in Galicia, 12 m. from Tarnopol; *pop.* 6,217.

Ze'a, Ce'os (anc. *Coos*), an island of the Grecian Archipelago, 14 m. off the coast of Attica; 13 m. long, 8 wide; *area*, 39 sq. m. *Prod.* Wine, honey, fruit, barley, silk and cotton. Here were born the poets Simonides and Bacchylides and the physician Erasistratus. *Pop.* (1897) about 4,500, nearly all in the capital Zea or Ceos.

Zeal (*zēl*), *n.* [Lat *zelus*; Gr. *zēlos*, from *zeo*, to boil.] Fervor; ardor; warmth; passionate ardor.

Zealot, (*zel'ot,*) *n.* One full of zeal; one who engages warmly in any cause, and pursues his object with earnestness and ardor.

Zeal'otism, Zeal'otry, *n.* The character or conduct of a zealot; fanaticism.

Zeal'ous, *a.* Full of zeal; warmly engaged or ardent in the pursuit of an object.

Zeal'ously, *adv.* In a zealous manner; with passionate ardor; with eagerness.

Zeal'ousness, *n.* The quality of being zealous; zeal.

Zean'dale, in *Kansas*, a village and twp. of Wabaunsee co., abt. 6 m. S.E. of Manhattan.

Zeb'edee. (*Script.*) The husband of Salome, and father of James and John, the Apostles, was a fisherman on the W. shore of the Sea of Galilee.

Zebid', a fortified city of Arabia, once the cap. of Yemen, on the River Zebid, 60 m. from Mocha. It was formerly of great commercial importance, but owing to the accumulation of sand at the mouth of its river, has fallen into comparative insignificance. *Pop.* 7,000.

Ze'bra, *n.* (*Zoöl.*) A name applied in a general way to striped species of the genus *Equus*, characterized by a longer tail, tufted at the end, by callosities on the inner side of the fore-legs only, and by *braying*, instead of *neighing*. The name *Z.*, however, is commonly used to designate the species *Equus zebra*, which inhabits the rocky and mountainous districts of S. Africa (Fig. 2640), and has the stripes on all parts of its body. It is closely

Fig. 2640.—ZEBRA.

allied to the ass, having its tail furnished with long hairs only at its tip, and being destitute of a mane like the horse. In disposition it is very wild and untamable, seeking inaccessible crags where to graze, and having sentinels posted on commanding eminences so as to give warning of the approach of any suspicious object; and no sooner is an alarm given, than the herd sets off, galloping over the crags with a swiftness which sets pursuit at defiance.

Ze'bu, *n.* (*Zoöl.*) The name given to the humped varieties of oxen which are found in India and the Asiatic Islands, and extend along the eastern coast of Africa to the Cape of Good Hope (Fig. 47). They are used as beasts of burden, and serve as articles of food, though in this respect its flesh is by no means equal to that of our domestic breeds. The hump, which is chiefly composed of fat, is regarded as a great delicacy. *Z.* differ greatly in dimensions; some are of large size, while others are not much larger than a sheep. They vary in color; the most common variety is of a light-gray, passing into cream color. The Hindoos treat the larger breed with superstitious veneration.

Ze'bu, one of the Philippine Islands, in the E. Archipelago, lying to the W. of Negros Island. *Ext.* 100 m. long, with a varying breadth to 30. Its cap. is of the same name, and has a fort and a cathedral. *Pop.* 9,000. Here Magellan was killed in a skirmish in 1521.

Zeb'ulun, or ZABULON. (*Script.*) The sixth son of Jacob and Leah, born in Mesopotamia.

Zechariah, (Book of,) (*zek-a-rī'a.*) (*Script.*) One of the canonical books of the Old Testament Scriptures, being the eleventh in order of the minor prophets. The author, *Z.*, began his prophecy in the second year of the reign of Darius, shortly after the return from Babylon, where he is generally supposed to have been born. The style of this book is deficient in the purity and freshness of a former age, and the figures and symbols are frequently obscure; though, with the exception of Isaiah, his allusions to the Messiah and his kingdom are the most clear and direct of any of the prophets. Many of the modern critics have denied the authenticity of the last six chapters, though there seems to be little force in their objections.

Zechin, (*zē'kin.*) See SEQUIN.

Zed, *n.* The name of the letter *z*.

Zedekiah, (*zed-e-kī'a,*) the son of Josiah, king of Judah, was placed upon the throne after Jehoiakin had been removed by Nebuchadnezzar, on his second taking of Jerusalem, 599 B.C. He reigned during eleven years, "and he did that which was evil in the sight of the Lord his God." He entered into an alliance with Pharaoh-Hophra, king of Egypt, and revolted against Nebuchadnezzar, who thereupon laid siege to Jerusalem. The prophet Jeremiah counselled Zedekiah to save his city and throne by submission to the Chaldeans; but the king, disregarding this advice, maintained his defence of the city. The Egyptians came to his relief; but, on Nebuchadnezzar offering them battle, they retreated to their own country, and Jerusalem, after undergoing a siege of nineteen months (in the latter part of which a terrible famine raged), was taken, 586 B.C. The king endeavored to escape, but was captured, and condemned to behold his sons slain before him; after which his eyes were put out, and he was carried, bound with fetters of brass, to Babylon. The city was almost entirely destroyed, and the people led into captivity.

Zed'oary, *n.* (*Bot.*) The name commonly given to certain species of *Curcuma* (*C. zedoaria*, and *C. zerumbet*), natives of the East Indies, the root-stocks of which are aromatic, bitter, pungent, and tonic, and are used for similar purposes with ginger.

Zee'land, or ZEALAND, in *Michigan*, a p.-vill. and twp. of Ottawa co., abt. 22 m. S.W. of Grand Rapids.

Zeff, in *Illinois*, a post-twp. of Wayne co.

Zeigiersville, in *Pennsylvania*, a post-village of Montgomery co., abt. 30 m. N.N.W. of Philadelphia.

Zeithun, ZEITUN, or ISDIN, (*zai-toon',*) a town of Greece, 48 m. from Larissa; *pop.* 4,800.

Zeitz, (*zitze,*) a walled town of Prussian Saxony, on the Elster, 67 m. from Dresden. *Manuf.* Woollens, &c. *Pop.* 11,650.

Zelay'a, or CELA'YA, a town of Mexico, 35 m. S.E. of Guanajuato; *pop.* abt. 12,000.

Zell, a vill. in Rhenish Prussia; *pop.* 2,200.—A vill. of the grand-duchy of Baden; *pop.* 1,207.—A vill. in the canton of Lucerne, Switzerland; *pop.* 1,202.—A v. in the canton of Zurich; *p.* 1,300.—A v. in Austria, see MARIAZELL.

Zell, one of the Shetland Islands. See YELL.

Zell, a village of Bavaria, on the river Main. It is noticeable as being the place where, in an old secularized abbey still used as a printing-office (Fig. 2641), the 1st steam printing-press was established in Europe.

Fig. 2641.—ZELL, (Bavaria.)

Zell, a lake of Switzerland, between the canton Thurgau and the S. part of the grand-duchy of Baden. *Ext.* 12 m. long and 4 broad.

Zell, ULAIC, an eminent German printer, b. at Hanau, abt. 1430. He introduced printing into Cologne, where he first published the *princeps* edition of *De Senectate of Cicero*, 1465; and, the following year, *Johannis Chrysostomi super Psalmo Quinquagesimo*. D. abt. 1499.

Zellerfeld (*zel'ler-felt*), a town of Germany, in Hanover, in the Upper Hartz, and opposite Hausthal, from which it is separated by the Zellerbach. *Pop.* 5,000.

Zell'wood, in *Florida*, a post-village of Orange co., on the Florida Central & Peninsular R. R., about 20 m. N.W. of Orlando. *Pop.* (1897) 450.

Zena'na, *n.* The name given in India to the part of a house particularly reserved for the women.

Zend-Aves'ta, [Pers. *living word.*] A name not infrequently, though erroneously, given to the Bible

of the Parsees, the descendants of the ancient Persians. It should be rather termed the "Avesta and Zend," the latter word meaning explanation or commentary. The Avesta is written in the Pahlavi language (*q. v.*). Its authorship is attributed to Zoroaster, the founder of the religion of the Parsees. The general opinion is that the Avesta, as it at present stands, is a collection, made about A. D. 220, of the remains of more ancient writings about the Parsees' religion, though how far these may be justly attributed to Zoroaster it is, of course, impossible to say. The *A.* consists of five books: (1) The *Yasna*, the chief liturgical work, and forming, with the Visperad and Vendidad, a sort of Zoroastrian prayer-book. (2) The *Visperad*, a collection of minor litanies, invocations, and offerings. (3) The *Yashts*, some twenty-one longer hymns of praise and adoration of the ancient divinities and mythical heroes. (4) The Minor Texts, a kind of manual of morning devotion. (5) The *Vendidad*, a species of Iranian Pentateuch, containing priestly injunctions.

Zen'ith, *n.* (*Astron.*) The point of the heavens directly over the head of an observer. The *Z.* is called the "pole" of the horizon, as it is 90° distant from every point of that circle. The *Z.* distance of a heavenly body is the arc intercepted between the body and the *Z.*, being the same as the co-altitude of the body.

Z. sector. (*Astron.*) An instrument which is a portion of a divided circle, and is employed in measuring the *Z* distance of stars. The origin of the beautiful instruments now made use of by astronomers was a piece of mechanism devised by Picard in his celebrated operation for determining the figure of the earth.

Zenjan', a town of Persia, prov. of Irak-Ajemi, 130 m. from Hamadan. *Manuf.* Carpets, arms, and gunpowder. *Pop* 15,000.

Ze'no, a Greek philosopher, founder of the Stoic School, B. at Citium, a small town in Cyprus, probably about B. C. 355. His father Mnaseas was a merchant, and brought him up to the same calling. But the writings of the Socratic philosophers fell in his way, and attracted him to a higher field; and the accident of his shipwreck, with the loss of a valuable cargo, on the coast of Africa, left him poor, and free to follow his genius, and become a philosopher. He first attended at Athens the lectures of Crates, the cynic; but soon, dissatisfied, turned to Stilpo of the Megaric school; and afterwards to the philosophers of the Academy, Xenocrates and Plato. He did not permanently adhere to any of these schools, but after twenty years' ardent inquiry and pursuit of truth, began to teach a system of his own. He gathered his disciples in the *Stoa*, or Portico painted by Polygnotus, whence the name of his school — the *Stoic*. *Z.* was of feeble health and deeply thoughtful aspect; lived very abstemiously, presided over the school for 58 years, and reached, it is said, the age of 98. His personal character was the faithful counterpart of his doctrine, and he was held in such high honor by his fellow-citizens, that they are said to have placed in his keeping the keys of their citadel. D. probably abt. B. C. 264. See STOIC.

Ze'no, called the *Isaurian*, emperor of the East, married the daughter of Leo I in 458. His rule proved so odious to his subjects, that, in 475, he was driven from his throne by Basiliscus; but the year following he recovered it. D. 491.

Ze'no OF ELEA, a Greek philosopher, and a follower of the Eleatic sect. He studied under Parmenides, and accompanied that philosopher to Athens about 454 B. C. According to Aristotle, he was the first who taught dialectically. An ardent patriot, he endeavored to deliver his country from the sway of a tyrant; but the conspiracy in which he was engaged having been discovered, he was put to death in a barbarous manner. He was the author of several philosophical works, none of which have survived. Aristotle has, however, preserved the arguments which Zeno held against the existence of absolute motion. Flourished in the 5th century B. C.

Zeno'bia, SEPTIMIA, a princess of Arabian descent, who became queen of Palmyra in the desert, after the murder of her husband, Odenatus, in 267. The latter was killed by his nephew at a festival, and Zenobia, who acted with great energy, assumed the title of Queen of the East. She was deprived of her dominions by the emperor Aurelian in 272, and D in private retirement near Rome. The celebrated critic Longinus acted as her secretary, and was put to death by the Romans.

Zen'ta, or SZENTA, a town of Hungary, on the Theiss, 24 m. S. of Szegedin.

Ze'olite, *n.* [Gr. *zeo*, to boil] (*Min.*) The name of a fam. of silicates, their chief distinguishing feature being that they always contain a large proportion of water, varying from 4 to 20 per cent. They also possess in common the property of melting with considerable ebullition before the blow-pipe, and of forming a precipitate of gelatinous silica in hydrochloric acid, and of yielding a colorless streak. The Zeolites usually occur in volcanic rocks in the form of crystals, or of foliated and radiated masses, filling cavities, veins, and fissures — sometimes, as in basalt, they constitute an essential ingredient of the rock itself. The principal species composing the group of Zeolitic minerals are: — *Analcime, Apophyllite, Chabazite, Gmelinite, Harmotome, Heulandite, Laumontite, Mesolite, Natrolite, Phillipsite, Prehnite, Scolezite, Stilbite, Thomsonite.*

Zephaniah, (Book of,) *zef-a-ni'ă.*) (*Script.*) One of the canonical books of the Old Testament, the ninth in order of the minor prophets. The author is believed to have flourished during the earlier portion of the reign of Josiah. The book contains States of the Church. The style is pure and poetical, but not characterized by any striking or uncommon beauties.

Zephiri'nus, a Pope, successor of Victor I. He is supposed to have suffered martyrdom about 219. His successor was Calixtus I.

Zephyr, (*zĕf'er,*) *n.* [Lat. *Zephyrus*; Gr. *zephŭros*, strictly the N.W., from *zophos*, the gloom of the nether world, the dark side, the west] (*Myth.*) The personification of the west wind. According to the Hesiodic theogony, he was the son of Astræus and Eos. The Greek name signifies life-bringing, as the time at which that wind begins to blow marks the revival of vegetation. He is represented as a youth beautiful and naked, with a wreath on his head, or carrying flowers in the fold of his mantle.—The west wind; and, poetically, any soft, mild, gentle breeze.

Zer-Afchan, (*zer-af-kan',*) a river of Independent Turkestan, Bokhara, rises E. of Samarcand, and enters Lake Denghiz, after a W. course of 400 m.

Zer'bu, or JERBA, an island of N. Africa, belonging to Tunis, in the Gulf of Cades, 15 m. N.W. of Zarziss, 22 m. long, and 14 broad.

Zer'be, in *Pennsylvania*, a township of Northumberland co.

Zerbst, (*tserpst,*) a town of Germany, duchy of Anhalt-Dessau, on the Nuthe, 66 m. S.W. of Berlin. *Manuf.* Jewelry, earthenware, and beer. *Pop* 9,350.

Ze'ro, *n.* [Fr.: It.; Sp.] An arithmetical cipher; — a term generally used in reference to the thermometer, implying the point at which the gradation commences. The zero of Réaumur's and of the centigrade thermometer is the freezing-point of water. The zero of Fahrenheit's scale is 32° below the point at which water congeals, being about the temperature of a mixture of salt and snow.

Zerub'babel, the son of Salathiel, and one of the family of the kings of Judah. He gained the esteem of Cyrus, king of Persia, who gave him the sacred vessels, with which he returned to Jerusalem, where he rebuilt the temple, which was dedicated 515 B. C.

Zest, *n.* [Ar. *istalaz*, to have the taste, relish, or smack of] That which gives a relish; a relish; something that gives a pleasant taste, or the taste itself; a piece of orange or lemon peel, used to give flavor to liquor; or the fine thin oil that spurts out of it when squeezed.

—*v. a.* To give a relish or flavor to; to heighten the taste or relish of.

Ze'ta, *n.* A Greek letter (ζ), corresponding to the English *z*.

Zeug'lodon, *n.* [Gr. *zeugle*, a yoke, and *odous*, a tooth.] (*Pal.*) A genus of gigantic cetacean animals, the remains of which have been found in the miocene strata of North America (especially in Alabama) and Europe. The entire skeleton of the largest species (*Zeuglodon Harlani*) indicates an animal about seventy feet in length. The skull is very long and narrow; the nostril single, with an upward aspect, above and near the orbits. The jaws are armed with two kinds of teeth, set wide apart; the crown of the tooth being contracted from side to side in the middle of its base, so as to give its transverse section an hour-glass form (whence the name).

Zeug'ma, *n.* [Gr., a yoke.] (*Gram.*) A figure by which an adjective or verb which agrees with a nearer word is referred also, by way of supplement, to one more remote.

Zeulenroda, (*tsoi-len-ro'da,*) a town of Germany, 9 m. S.W. of Greitz. *Manuf.* Woollens, hosiery, and watches. *Pop.* 5,500.

Ze'us. See JUPITER.

(*Zoöl.*) See DORY.

Zeux'is, one of the greatest Greek painters, was a native of one of the many cities named Heraclea, and flourished in the latter half of the 5th century B. C. He travelled a good deal, spending some time at Athens during the Peloponnesian war, visiting the court of Archelaus, king of Macedonia, and afterwards Italy and Sicily. He excelled in form, light and shade, and coloring, in dramatic composition of grand subjects, and in imitation of inanimate objects. He made a large fortune, was extremely vain, and at last used to give away his pictures because he thought them worth more than any price that could be set on them. One of his most celebrated works was the picture of *Helen*, painted for a temple at Croton. Five of the most beautiful girls of that city were his models for the work. Among the other famous works of *Z.* were his *Infant Hercules strangling the Serpent*; *Female Hippocentaur*; *Zeus in the Assembly of the Gods*, &c. Parrhasius was a young rival of *Z.*, and in a competition between them was allowed by *Z.* to surpass him. On that occasion, *Z.* painted a bunch of grapes which birds pecked at, and Parrhasius a curtain which deceived *Z.*

Zey'lanite, *n.* (*Min*) Same as *Ceylanite*. See SPINEL.

Zi'bet, *n.* (*Zoöl.*) A species of carnivorous mammalia belonging to the genus *Viverra* and the family *Viverridæ* (Fig. 2642). It is found on the Asiatic coast, and

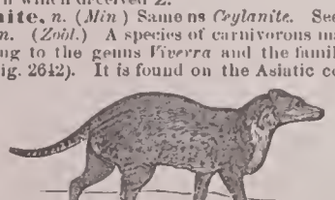

Fig. 2642. — ZIBET.

in some of the larger islands of the Indian Archipelago. It has a short and thick neck, the breast being full and somewhat distended, and differs considerably in its markings from its African congener, the Civet. The substance secreted by an opening near the tail resembles that of the Civet, and is, perhaps, equally prized. See CIVET.

Zie'ga, *n.* Curd produced by the addition of acetic acid to milk, after rennet has ceased to produce coagulation.

Zielenzieg, (*tse'len-tseeg,*) a town of Prussia, 22 m. E. N.E. of Frankfort-on-the-Oder. *Manuf.* Linens, hosiery, hats, leather, and gloves. *Pop.* 4,950.

Zieng Mai-a-Laos, (*zeeng-ma'a-la'os,*) a state of S.E. India, tributary to Siam; Lat. between 20° and 21° N., Lon. 98° and 102° E. *Pop.* 40,000.

Zierik-see, (*se'rik-se,*) a fortified town of the Netherlands, prov. of Zealand, on the island of Schouwen, 30 m. S.W. of Rotterdam; *pop.* 7,700.

Zig'zag, *a.* [Fr.; formed from its likeness in sound to the thing it is intended to represent.] Having sharp and quick turns or flexures.

—*n.* Something that has short turns or angles, as a line, the stem of a plant, &c.

(*Arch.*) A chevron running in a zigzag line.

—*pl.* (*Fort.*) In the attack of a fortress, approaches connecting the parallels. They are directed so that their prolongations fall alternately to the right and left of the fortress, and clear of the most prominent salients of the covered way.

—*v. a.* To form with short turns or angles.

Zilleh, (*zil'la,*) a town of Asia Minor, 35 m. W.S.W. of Tokat. *Manuf.* Coarse cotton cloths. It has an annual fair, attended by over 50,000 persons.

Zilwau'kie, in *Michigan*, a post-village of Saginaw co., 6 m. N.E. of Saginaw.

Zim'mermann, JOHANN GEORG VON, was one of the most eminent physicians in the 18th century, both as a practitioner and as a professional writer. His miscellaneous writings also were numerous; and one of these, his striking but not very philosophical essay *On Solitude*, is now, indeed, quite forgotten, but was once very popular. It was first printed, as a sketch, in 1756, and afterward in its complete shape in 1785. *Z.* was born in 1728, at Brugg, in the canton of Bern. After having studied at Göttingen, he practised medicine successively at Bern and in his native town. His tendency to hypochondria showed itself even thus early, but did not disqualify him from either active practice or from zealous and miscellaneous studies. His professional celebrity gained him, in 1768, the appointment of royal-physician at Hanover; after the second appearance of his work *On Solitude*, he was invited to St. Petersburg; and the year after he attended Frederick of Prussia in his last illness. His writings after this were chiefly gossiping collections, and expressions of the errors with which he regarded the revolutionary principles that were becoming prevalent. His melancholy continued to increase, and he was completely deranged for some time previous to his death, which took place in 1791.

Zim'mermanstown, in *Pennsylvania*, a village of Schuylkill co., 16 m. W. of Pottsville.

Zinc, (*zingk,*) *n.* [Fr.; Ger. *zink*.] (*Chem.*) A bluish-white lustrous metal, having a crystalline lamellar structure, moderate hardness, a somewhat low melting-point. To obtain it pure, commercial zinc, or spelter, as it is termed, is dissolved in pure dilute sulphuric acid; a cement of sulphuretted hydrogen is then passed through it, and it is filtered from any precipitate formed. The solution is then boiled to expel any sulphuretted hydrogen that may remain in it, and the zinc is precipitated in the form of carbonate by pure carbonate of soda. The carbonate is then ignited to transform it into oxide of zinc, which is distilled in a porcelain retort with charcoal prepared from loaf-sugar. Zinc is brittle at ordinary temperatures, but is possessed of considerable malleability and ductility at a temperature of between 200° and 300°, and may be wrought and rolled with ease. A little above this it becomes brittle again, and may be pulverized in a mortar. It fuses at 773°, and at a bright red heat it may be volatilized. If its vapor is exposed to the air, it burns with great splendor, becoming converted into oxide, which is deposited in loose flocculi. At the ordinary temperature it is not acted on by the air, but when exposed to moist air or oxygen, it becomes covered with a tenacious gray coating of hydrated oxide, which impedes the further oxidation of the metal beneath. In this respect zinc rust differs from iron rust, which seems to accelerate the oxidation of the adjacent metal. By the conjoint action of oxygen and carbonic acid, zinc roofing becomes converted into a mixed oxide and carbonate. When melted in the air, the oxide is formed much more rapidly. The metal is readily dissolved by the mineral and vegetable acids. Boiling solutions of potash also act on zinc, hydrogen being liberated, and oxide of zinc remaining dissolved in the alkaline solution. The difficultly oxidizable nature of zinc, its cheapness, the ease with which it is extracted from its ores, and the ready way in which it may be worked, are bringing it daily more and more into use. Neither the vapor nor its oxide is poisonous. It is of the greatest use in the laboratory, for the precipitation of certain metals and for the formation of hydrogen. For voltaic purposes it is indispensable, and its principal alloy, brass, is too well known to need description. It forms alloys with iron and several other metals. The so-called galvanic iron is iron covered with a protective coating of zinc. It also enters into the composition of German silver. The origin of the term *zinc* is lost in obscurity; it was first employed by Basil Valentine, but the great Paracelsus was the first to associate the word with a metal possessing the characters of zinc. It hardly seems probable that zinc was known to the ancients. An obscure passage in Strabo seems to show that a certain stone was found to drop *false silver* when melted, but there is little to show that this *false silver* was zinc. It is positive, however, that its alloys were known to the later Romans, for numerous coins have been found containing copper and zinc nearly in the proper proportions to form brass. It was not until the beginning of the last century that zinc was commercially extracted from its ores in Europe. Before this, however, it was

imported by the Portuguese and others from the East Indies and China, under the name of *tutenag* and *spelter*. It seems first to have been made in England by Mr. Champion, of Bristol, about the year 1743. Long before zinc was known as a metal, brass was made in large quantities by heating metallic copper imbedded in a mixture of calcined calamine and carbonaceous matter. This was effected in large crucibles, which were exposed to a long-continued heat in furnaces constructed for the purpose. The zinc immediately on its liberation from the calamine of course united with the copper without giving any notice of its presence. The only use to which zinc was applied for many years after its discovery was for mixing with copper to form brass; and it was comparatively of late years that the fact of its becoming ductile and malleable when heated was made known. A patent was granted to the discoverers of this property, Sylvester and Hobson, in 1805, since which period the zinc manufactnre has made steady progress. Zinc has a considerable power of dissolving iron; in consequence of which the iron pots in which it is melted soon become corroded and unfit for use. Its specific gravity varies, according to the closeness of texture of the sample, from 7·03 to 7·2, or even 7·3. Zinc is abundantly distributed in the form of various ores throughout the whole known world. Its principal ores are: *Red zinc ore*, which is found and worked in New Jersey, U. States. It consists of oxide of zinc, colored with binoxide of manganese. *Carbonate of zinc*, or *Calamine*, found extensively in the Devonian and carboniferous formations of most countries, especially near Lancaster, Columbia co., Penn., where the mines opened in 1853 are worked by the Lehigh Zinc Company. The calamine mines in this country are nearly worked out, only 280 tons having been raised in 1859, the amount in 1800 being 1,500 tons. *Hydrated silicate of zinc*, which is worked extensively in the U. States. *Sulphide of zinc, blende*, or *black jack*, which is met with in large quantities in various parts of England and Europe. In the extraction of zinc from its ores, the blende or calamine is first crushed between rollers and roasted. In the case of the blende this is a tedious process, and requires great care. The result in either case is oxide of zinc, which is mixed with half its weight of powdered coke or anthracite, and introduced into crucibles of peculiar construction. A circular furnace is employed, within which the crucibles are ranged. In the bottom of each crucible is an opening, to which a short iron pipe is attached, passing through the bottom of the furnace. To the end of this is affixed a removable tube communicating with a sheet-iron vessel. The hole in the bottom of the crucible having been partially plugged with coke, a charge of ore and coal is introduced, and the top of the crucible luted down. The tube connected with the iron vessel is lowered so as to leave the crucible tube open, and the heat is raised. So soon as the flame at the mouth of the short iron tube begins to turn from white to blue, connection is made with the tube leading to the iron pan, and the zinc gradually distills downwards, partly in powder and partly in stalactitic masses. The crude metal is re-melted, skimmed, and cast into ingots. In Silesia and Belgium retorts are used instead of crucibles, or *per ascensum* instead of *per descensum*. Zinc is often known in commerce as *spelter*, the derivation of which term is unknown. The equivalent of zinc, as now determined, is 65. *Symbol* Zn.

Oxide of Zinc. Zinc only forms one oxide, ZnO, which occurs in nature as *red zinc ore*. The anhydrous oxide is formed when zinc is burnt in air, and has been occasionally found in four- and six-sided prisms in the flues of zinc-furnaces. It is best prepared in the laboratory by calcining the precipitate produced by mixing solutions of sesquicarbonate of ammonia and sulphate of zinc. On the large scale, when it is required as a pigment, it is made by distilling zinc in clay retorts, passing into chambers through which a current of air is maintained. The volatilized metal burns at the high temperature to which it is exposed, and the oxide is deposited in the condensing chambers. As a pigment, it has not met with great success, as it does not wear so well as white lead, from its lesser specific gravity. In situations where it is exposed to sulphurous fumes, it stands perfectly, and being harmless in its nature, it is not open to the objections raised against its poisonous congener. Oxide of zinc forms a light white powder, which becomes yellow when heated, regaining its whiteness when it cools. It is a permanent oxide, even at the greatest heat. When exposed to the air, it becomes converted into a carbonate. It dissolves readily in acids, and its salts have the same form as those of magnesia and oxide of iron, with which it is isomorphous. Its salts, though neutral in composition, have an acid reaction. It is not easily dissolved in solutions of potash and soda, but if fused with them in a silver crucible, it forms compounds soluble in water, in which the oxide of zinc appears to play the part of an acid. The hydrated oxide is formed by adding a solution of potash to the sulphate of zinc. It is readily soluble in excess of alkaline solutions. In medicine, oxide of zinc is used in ointments as an astringent and desiccant, and by itself as a tonic, especially in cases of nervous debility brought on by drinking. Zinc is said to be a binoxide, but it requires confirmation. — *Nitrate of zinc* is prepared by dissolving zinc in dilute nitric acid. It forms deliquescent four-sided prisms, soluble in water and alcohol. — *Sulphate of zinc*, or *white vitriol*, is manufactured on a large scale by roasting native sulphide of zinc (blende), extracting the mass with water, and evaporating to the crystallizing point. It is generally sent into commerce in white lined masses. Generally speaking, it contains six atoms of water of crystallization; but compounds containing less have been formed. It crystallizes ordinarily in four-sided prisms. It is used in medicine as an emetic, and very largely by calico-printers. It is soluble in 2½ parts of water, but insoluble in alcohol. Several basic sulphates are said to exist. They combines directly with ammonia, forming a definite compound. It also forms double sulphates with those of potassa, ammonia, magnesia, and protoxide of iron. — *Carbonate of zinc*, or *calamine*, occurs in nature in large amorphous masses, and occasionally in crystals of the same form as those of carbonate of lime. It is the chief ore of zinc, and is employed in its impure state in medicine as an exsiccant, and in healing cerates. The anhydrous carbonate may be prepared in the laboratory by placing a tube containing carbonate of soda in a strong tube containing sulphate of zinc, sealing the outer tube hermetically, heating it to 320° Fahr., and inverting it so that the solutions may mix: crystalline grains of the anhydrous carbonate are gradually deposited. No neutral carbonate of zinc can be obtained from its salts by double decomposition. — *Chloride of Z.* is prepared by dissolving granulated zinc in hydrochloric acid, and evaporating, when it is obtained in a semi-solid hydrated mass, known as *butter of Z.* If this be further heated, it fuses, becomes anhydrous and solid. It is deliquescent, fuses easily, and may be distilled. It is remarkably soluble in water, and its strong affinity for that substance renders it of great use as a desiccating agent in organic research. In solution it forms Burnett's disinfecting fluid. It is a powerful escharotic when applied to the skin, and is used in surgery for that purpose. It fuses above 700° Fahr., but does not decompose unless more strongly heated; hence, a bath of it is sometimes used for maintaining objects at a high temperature. Its solution absorbs ammoniacal gas with avidity. It forms double salts with the chlorides of the alkaline metals. Its solution is also much used in soldering zinc, iron, and copper. Its solution is also much used for preserving objects for dissection, as it does not corrode the instruments in the same way as corrosive sublimate. Several oxychlorides are said to exist. — *Sulphide of zinc*, or *blende*, is found native contaminated with a large number of the other metals. It may be prepared by the direct combination of its elements. The hydrated sulphide is obtained as a white precipitate, by adding an alkaline sulphide to a solution of some zinc-salt. There are several oxysulphides of zinc. The *trisilicate of zinc*, or *electric* calamine, is found native in several parts of the world. Heat develops electricity in it; hence its name. *Valerianate of zinc* is used in medicine in combating nervous disorders.

Zinc-am'yl, *n.* (*Chem.*) A colorless, transparent liquid, emitting fumes, and rapidly absorbing oxygen when exposed to the air, but not taking fire spontaneously.

Zinc-blende, *n.* (*Chem.*) Sulphide of zinc. See ZINC.

Zinc-bloom, DICARBONATE OF ZINC, *n.* (*Min.*) An opaque mineral, of a white, grayish, or yellowish color, dull lustre, occurring in earthy incrustations, and reniform, and consisting of carbonic acid, oxide of zinc, and water.

Zinc-eth'yl, *n.* (*Chem.*) A colorless, transparent mobile liquid refracting light strongly, boiling at 214° Fahr., and remaining uncongealed at —8° Fahr. It may be distilled unchanged in vessels filled with hydrogen or carbonic acid. It has a powerful but penetrating odor, bursting into flame in the air, and emitting fumes of oxide of zinc. Its evaporation is represented by the formula $Zn(C_2H_5)_2$. It is made by digesting iodide of ethyl and hydrous ether and granulated zinc in a sealed glass tube at 266° Fahr. for 12 or 18 hours. (See *Proceedings of the Royal and Chemical Societies.*) The discovery of this singular compound by Frankland has opened up a new field of organic research, and similar compounds have been formed with the other alcohol radicles and several of the metals. Zinc methyl and amyl have also been formed, and resemble zinc ethyl in their properties and preparation. The latter, however, does not inflame in the air. There is hardly any substance known which has so intense an affinity for oxygen and chlorine as *zinc methyl*.

Zinc'iferous, *a.* Producing, or containing, zinc.

Zinc'ite, *n.* (*Min.*) The Red zinc ore. See ZINC.

Zinc-meth'yl, *n.* (*Chem.*) A liquid prepared by the action of zinc upon the iodide of methyl (CH_3I), and resembles zinc-ethyl in its general character; it is, however, far more volatile and more energetic in its reactions than zinc-ethyl, and is decomposed with inflammation and explosion when brought in contact with water; yielding oxide of zinc and marsh-gas (hydride of methyl).

Zincog'rapher, *n.* An engraver on plates of zinc.

Zincog'raphy, *n.* The art of obtaining impressions from plates of zinc. The practice of the art differs from that of lithography only in this, that in the latter German stones are made use of, whilst in the former method plates of zinc are employed. See LITHOGRAPHY.

Zinc'oid, *n.* (*Chem.*) The positive *electrode*. See ELECTROLYSIS.

Zinc'ous, *a.* (*Chem.*) That has the affinity or attractions characteristic of the zinc or generative metal of the voltaic battery, as the *zincous* plates, or zincoid, of the decomposing cell;—used in contradistinction to *chlorous*, noting the affinity or attraction characteristic of the platinum or conducting plate of a voltaic battery.

Zinc'-white, *n.* (*Painting.*) The oxide of zinc used as a pigment.

Zinder', a town of N. Africa, in Bornou, 300 m. W.N.W. of Kooka; *pop.* 10,000.

Zingiber, (*zin'ji-ber,*) *n.* (*Bot.*) A genus of plants, order *Zingiberaceæ*, consisting of herbaceous Indian plants, with creeping jointed woody rootstocks, from which are sent up, every year, stems surrounded by sheathing leaves arranged in two ranks, cone-shaped spikes and flowers protected by bracts. The most important species is *Z. officinale*, the rhizomes of which furnish the well-known spice called *ginger*. The young rhizomes preserved in syrup are imported from the West Indies and China, and form the conserve known as *preserved ginger*, that imported from the West Indies being preferred to the Chinese kind. Ginger is extensively used as a condiment, and in medicine as a stimulant and stomachic.

Zingiberā'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Anomales*. DIAG. One stamen, a two-celled anther, and a vitellus round the embryo. They consist of aromatic herbaceous plants, of which the genus *Zingiber* (*q. v.*) is the type. There are 31 genera, which comprise about 250 species, mostly tropical. Ginger turmeric, grains of paradise, and the various cardamoms, are products of this order.

Zink'enite, *n.* (*Min.*) A native sulphantimonite of lead, composed of 40 per cent. of sulphide of lead and 60 per cent sulphide of antimony. It occurs in several places in bright steel-gray six-sided prisms terminated by low six-sided pyramids.

Zion, or SION, the highest and most southernmost mount of Jerusalem, rising about 2,500 feet above the Mediterranean, and from 200 to 300 feet above the valleys at its base. It was separated from Akra on the N. and Moriah on the N.W. by the Valley Tyropœon; and had the valley of Gihon on the W., that of Hinnom on the S., and that of the Kidron on the S.E. It was a fortified town of the Jebusites till subdued by David, and thenceforward was called the "city of David." A mosque near its southern brow now covers the "tomb of David," so called, most jealously guarded by the Mohammedans.

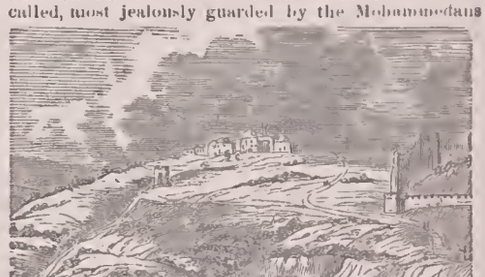

Fig. 2643. — MOUNT ZION.
(With the Mosque of David, part of the S. wall of Jerusalem, and the Valley of Hinnom.)

(Fig. 2643). This mount, together with Moriah and Ophel was enclosed by the first wall, and fortified by citadels. Upon it were erected the magnificent palaces of Solomon, and long afterwards those of Herod. At this present day a considerable portion of it lies outside of the modern wall on the S. — "Zion," and "the daughter of Zion," are sometimes used in Scripture to denote the whole city, including especially Moriah and the Temple; and sometimes figuratively for the seat of the true Church on earth and in heaven.

Zion, in *Pennsylvania*, a post-village of Centre co., 5 m. N.E. of Bellefonte.

Zi'onsville, in *Indiana*, a post-town of Boone co., 15 m. N.N.W. of Indianapolis.

Zionsville, in *Pennsylvania*, a post-village of Lehigh co., 40 m. N.N.W. of Philadelphia.

Zir'con, *n.* [A. S. *zersk*, blue, hyacinth.] (*Min.*) A silicate of zirconia, found in the sand of the rivers of Ceylon and other places. It occurs in crystals, generally square four-sided prisms terminated by four-sided pyramids, and also in grains, sometimes white, but more frequently red, brown, yellow, green, or gray. The colorless or slightly smoky kinds are called *Jargoon*; the bright red, *Hyacinth*; and the grayish or brownish, *Zirconite*. When of a fine color and transparent, these are sometimes used in jewelry.

Zirco'nia, *n.* (*Chem.*) See ZIRCONIUM.

Zir'conite, *n.* (*Min.*) See ZIRCON.

Zirco'nium, *n.* (*Chem.*) The metallic basis of the earth zirconia, contained in the rare minerals zircon and hyacinth, which are silicates of the earth. It has yet only been obtained as a black powder, which does not conduct a feeble voltaic current. It has not been fused, and only assumes a weak metallic lustre under the burnisher. Heated in air, it forms zirconia of ivory whiteness. *Zirconia* (ZrO_2) is its only oxide. It is a white infusible powder, which after ignition is only soluble in sulphuric acid. It forms several salts, of which the sulphate of potash and sulphate of zirconia are mixed together, *sub-sulphate* of zirconia and *bisulphate* of potash are formed. The *chloride of Z.* forms needles, which effloresce in the air, losing water and hydrochloric acid, and leaving behind a soluble oxychloride. Swanberg says that zirconia is not a pure earth, but a mixture of three. *Symbol*, Zr.

Ziska, or **Zizka** (*zis'ka*), JOHANN, the Hussite leader, born at Trocznow, Bohemia, about 1360 or 1380. He was of a noble family, and became a page at the court of King

Wenceslaus; but soon disgusted with the frivolity and vice he witnessed, he entered on a soldier's life. He served in the Polish army, and greatly distinguished himself at the famous battle of Tannenberg, in which the Teutonic Knights were finally defeated; next fought against the Turks, and in 1415 distinguished himself in the English army at Agincourt. That same year the reformers, John Huss and Jerome of Prague, countrymen of *Z.*, and whose doctrines he held, were burnt at Constance. Failing to rouse the king, whose chamberlain he was, to decisive action, *Z.* resolved to take arms himself as the defender of the Hussites. A body of troops was organized, and the terrible Hussite war began with a riot at Prague, in July, 1419. *Z.* took the chief command, built fortresses, and trained the troops, took Prague in 1420, and won a great victory over the Emperor Sigismund, who attacked him on Mount Wittkow, since named Ziska-Berg, in July. In the following year he made himself master of the citadel of Prague, and soon after lost his remaining eye — he had lost one in his childhood. He nevertheless continued to hold the command, and to beat the imperial armies, and among all the battles and engagements he fought, he was only once defeated. The emperor at last treated with him on equal terms, granted freedom of worship to the Hussites, and appointed their hero governor of Bohemia. *Z.* tarnished his fame by the cruelties he practised on the enemies of his faith; and, like some other men called to like grave tasks, justified his course on the ground that he was the agent of divine providence in inflicting vengeance. The treaty with the emperor was not completed, when *Z.*, engaged in the siege of a castle near Czaslau, was seized with the plague, and died there, October 12th, 1424. His remains were interred at Czaslau, and the Emperor Ferdinand I., visiting the church in 1554, is said to have gone with terror from the town to sleep elsewhere. The awe inspired by the name of this great soldier is illustrated by the myths which have grown up around it. The war between the Catholics and the Hussites continued for 11 years after *Z.*'s death.

Zittau, (*tsit'tou,*) a town of Germany, in Saxony, on the Mandau, 48 m. S.E. of Dresden. *Manuf.* Cottons, woollens, and planofortes.

Ziz, a river of Africa, in Morocco, rises S. of the Atlas Mountains, and after a S.E. course of 200 m., loses itself in the sands of the Sahara.

Zizania, *n.* (*Bot.*) A genus of plants, order *Gramineæ*, the most interesting species of which is *Z. aquatica*, the Indian rice or Canada-rice, found in the U. States and Canada on inundated shores of ponds and rivers. Its fruit, which is very abundant, affords sustenance to wild geese, ducks, and other water-fowl.

Zizyphus, (*ziz'i-fus,*) *n.* (*Bot.*) A genus of plants, order *Rhamnaceæ*, chiefly belonging to the tropics of the Old World. Many of the species have edible fruits: thus, *Z. vulgaris*, *Z. jujuba*, and others, yield the fruits called jujubes; *Z. lotus*, the fruit supposed to be the lotus of the ancients, from which the Lotophagi received their name. The latter is much esteemed by the Arabs.

Zloczow, (*zlot'sou,*) a town of Austrian Poland, 33 m. E. of Lemberg. *Manuf.* Canvas. *Pop.* 4,350.

Znaim, or **Znaym,** (*tsna'im,*) a town of Austria, on the Thaya, 34 m. S.S.W. of Brünn. *Manuf.* Woollens, tobacco, and mustard. *Pop.* 5,610.

Zoagli, (*dzo'al-ye,*) a town of N. Italy, on the Gulf of Genoa, 4 m. W. of Chiavari; *pop.* 4,400.

Zoanthus, *n.* [Gr. *zoos*, living, and *anthos*, a flower.] (*Zoöl.*) A genus of Polypes, comprehending those which possess the complex structure of the *Actiniæ*, but consist of different individuals adhering to a common fleshy basis, in which calcareous spicules are sparingly scattered.

Zoarces, *n.* (*Zoöl.*) A genus of acanthopterygious fishes, family *Gobidæ*, distinguished by an elongated body, dorsal, anal, and caudal united, and no spinous rays in the dorsal, except in its posterior part. The Eel-shaped Blenny, or Eel-Pout, *Z. anguillaris*, is from 24 to 36 inches long, dark olive-brown, varied with dusky blotches. It is caught in fishing for cod.

Zodiac, *n.* [Fr. *zodiaque*; Gr. *zodiakos*, from *zodion*, a little animal, from *zoon*, an animal, from *zaō*, Sansk. *jīv*, to live: — the constellations of the ecliptic being for the most part represented by the figures of animals.] (*Astron.*) An imaginary zone or belt in the heavens, extending to about 8° or 9° on each side of the ecliptic, within which the motions of the sun, moon, and principal planets are confined. It was divided by the ancients into 12 parts of 30° each called *signs*, and designated as follows:

Aries (*Ram*) ♈	Libra (*Balance*) ♎
Taurus (*Bull*) ♉	Scorpio (*Scorpion*) ♏
Gemini (*Twins*) ♊	Sagittarius (*Archer*) ♐
Cancer (*Crab*) ♋	Capricornus (*Goat*) ♑
Leo (*Lion*) ♌	Aquarius (*Water-bearer*) ♒
Virgo (*Virgin*) ♍	Pisces (*Fishes*) ♓

These names were given from a fanciful resemblance to the objects designated, which was supposed to be presented by the configuration of the stars. This division is still employed. See Constellation, and Planet.

Zodiacal, *a.* Belonging to the Zodiac.

Zodiacal light. (*Astron.*) A faint nebulous aurora which surrounds the sun in the plane of its equator. This curious phenomenon is visible immediately before sunrise or after sunset, in the place where the sun is about to appear or has just quitted the horizon. It has a flat lenticular form, extending from the horizon obliquely upwards, and following the course of the ecliptic, or rather of the sun's equator. The most favorable times for observing it are in the months of April or May, in the evening, or at the opposite season of the year before sunrise. Many opinions have been entertained respecting the nature and cause of this singular phenomenon. The most plausible of these is, that the *Z. L.* consists of a vast number of meteorites which circulate around the sun, and are gradually falling into that luminary, their impact contributing to restore the solar heat and light lost by radiation.

Zoe, (*zō'e,*) an empress of the East, was the daughter of Constantine IX., and became the wife of Romanus III. in 1028, when she was in the 48th year of her age. She was a debauched woman, and became the murderess of her husband, in order to place her lover on the throne, who reigned under the title of Michel IV. The latter dying, was succeeded by his nephew, Michel V., who was deposed by the people, and *Z.* and her sister Theodora proclaimed joint sovereigns. She displayed great ability and firmness in the government, and in 1042 married in third nuptials Constantine Monomachus. She continued to reign till her death at the age of 74, in 1052.

Zoʻhar, *n.* [Heb., splendor.] A Jewish book, highly esteemed by the rabbis, and supposed to be of great, though altogether unascertained, antiquity. It consists of cabalistical commentaries on Scripture, especially on the Pentateuch. It has been translated into Latin (ed. 1680).

Zoil'ean, *a.* Belonging to, or resembling *Zoilus*, q. v. —Unjustly severe.

Zoʻilism, *n.* Illiberal criticism; unjust censure.

Zoʻilus, a Greek rhetorician, who criticised the "Iliad" with such virulence as to be called "the rhetorical dog;" and his name became so familiar as to be applied to all snarling critics. Flourished about 270 B.C.

Zoisʻite, *n.* (*Min.*) A silicate of alumina and lime, formerly considered a variety of Epidote, and said to occur in fine crystals of a grayish-brown or olive color, at Hollyhill near Strabane, Tyrone.

Zolkiew, (*zhol'ku,*) a town of Austrian Poland, 16 m. N. of Lemberg. *Manuf.* Coarse woollens, leather, and porcelain. *Pop.* 4,350.

Zol'larsville, in *Pennsylvania*, a post-village of Washington co.

Zollverein, (*tsol'fer-ine,*) *n.* [Ger., toll-union.] The idea of a uniform system of customs for the German states, first suggested at the Congress of Vienna in 1815, was acted upon by the government of Prussia, which abolished all distinctions of customs throughout its territories, May 26, 1818, and invited other governments to unite for a similar purpose. The invitation was generally accepted, and the result was the formation of the *Z.*, or Customs Union of the German States, by a treaty signed March 22, 1833. Saxony joined the union March 30, Thuringia May 11, and the uniformity of customs thus introduced commenced Jan. 1, 1834. The German Empire now forms one customs and commercial union, in which was included in 1881 the free port of Hamburg.

Zombor', a town of Hungary, cap. of the co. of Bacs, 120 m. S. of Pesth. *Manuf.* Silks. *Pop.* 24,200.

Zoʻnar, *n.* A girdle which the Christians and Jews of the Levant are obliged to wear to distinguish them from Mohammedans.

Zōne, *n.* [Fr.; Gr. *zōnē*, a girdle, from *zonnumi*, to gird.] A girdle; a belt; a band or stripe running round an object: circuit; circumference.

(*Geog.*) A division of the earth with respect to the temperature of different latitudes. — The whole earth is divided into five *Z.*—the torrid, northern and southern temperate, and northern and southern frigid *Z.* The torrid *Z.* extends 23½° N. and S. of the equator, and twice a year the sun shines vertically on its inhabitants. The two temperate *Z.* extend from the tropics to the polar circles. The distance from the tropics to the polar circles, or the breadth of the temperate *Z.*, both in the northern and southern hemispheres, is 43°. All beyond the polar circles, to the poles, is called the frigid *Z.*

(*Math.*) The portion of the surface of a sphere included between two parallel lines.

Zoned, (*zond,*) *a.* Wearing a zone; having zones or concentric bands.

Zoneless, *a.* Destitute of a zone or girdle.

Zonotrichia, *n.* (*Zoöl.*) A genus of birds, family *Fringillidæ*. It has the bill conical, and slightly notched, wings not reaching to the middle of the moderately rounded tail, the second and third quills longest, tarsus longer than the middle toe, the hind toe longer than the lateral one, the claws of the latter just reaching to the base of the middle one. There are several American species, among which are the White-crowned Sparrow, *Z. leucophrys*, and the White-throated Sparrow, *Z. albicollis*, from east of the Rocky Mountains; and the Golden-crowned Sparrow, *Z. coronata*, of the Pacific coast.

Zonule, *n.* A little zone.

Zoochemy, *n.* [Gr. *zoon*, an animal, and Eng. *chemistry*.] Animal chemistry.

Zoogeny, *n.* [Gr. *zoon*, and *genesis*, generation.] The doctrine of animal formations.

Zoography, *n.* [Gr. *zoon*, and *graphō*, to write.] The natural history of animals.

Zoolatry, *n.* [Gr. *zoon*, and *latreyo*, to work for hire, to serve the gods with prayer and sacrifices.] The worship of animals, as in the religion of ancient Egypt.

Zoolite, *n.* [Gr. *zoon*, and *lithos*, a stone.] A petrified animal substance.

Zoologer, *n.* A zoölogist. (R.)

Zoological, *a.* Pertaining to zoölogy, or the science of animals.

Zoologically, *adv.* According to the principles of zoölogy.

Zoologist, *n.* One who is well versed in zoölogy, or in the natural history of animals, or who describes animals.

Zoologize, *v. i.* To practice the study of zoölogy; to pursue natural history.

Zoology (*zō-ol'-ō-jy*), *n.* [Gr. *zoon*, an animal, and *logos*, a discourse.] The branch of the science of Biology which relates to animals, as distinguished from Botany, that branch which relates to plants. The history of zoölogy has been an extended one. It first came into rank as a science in the works of Aristotle, after having excited the curiosity and attention of mankind for ages previously. After a long subsequent lapse into the domain of the non-scientific, it again became the subject of intelligent observation in the sixteenth century, while the first society for the study of animals and plants—the Academia Naturæ Curiosorum—came into existence in 1651, the Royal Society of London and the Academy of Sciences of Paris being founded somewhat later. From time to time, works on the general facts of zoölogy appeared, the productions of these encyclopædic authors culminating in Buffon's *Histoire Naturelle* (15 vols., 1749–67), a work which took all nature for its province, and contained many useful suggestions and evidences of keen perception. This period of accumulation of undigested facts was followed by one of systemization, the earliest able workers in this field being John Ray and Carl Linnæus. The *Systema Naturæ* of Linnæus (1735), the first definite attempt at classification after Aristotle, recognized six classes in the animal kingdom — Mammalia, Aves, Amphibia, Pisces, Insecta, and Vermes. Lamarck broadened this system, recognizing more clearly the distinction between the vertebrate and Invertebrate animals, and divided the latter much more definitely than had been done by Linnæus. Cuvier, in his *Règne Animal* (1829), advanced the idea of four great types or branches of animal structure—Vertebrata, Mollusca, Articulata, and Radiata. Agassiz and Owen adopted these types, though making much change in the subdivisions. But the Cuvierian system rapidly gave way before the more careful anatomical analysis that succeeded, the class Radiata vanishing and the others suffering much change. The new ideas were embodied in the early classifications of Leuckart, Milne-Edwards, and Huxley, which in their turn were superseded, as anatomy became supplemented by embryological and palæontological research, and as the evolutionary views advanced by Darwin began to exercise their influence on the opinions of zoölogists. The Cuvierian theory of types of structure vanished in the light of these new studies, and was succeeded by the doctrines of descent and genealogical succession. Several systems of classification have been devised to express these new views of the animal world, which are largely similar in their main features, their differences being in minor points. Among these, that of Ray Lankester is one of the most fully developed. It is far too intricate to be given here, and it must suffice to say that the recent systems agree in dividing the animal kingdom into the subkingdoms of Protozoa (single-celled animals), Porifera (sponges), Cœlenterata (polyps, medusæ, &c.), Echinodermata (star-fish, sea-urchins, &c.), Arthropoda (crustaceans, insects, spiders, &c.), Mollusca (the various classes of shell-fish), and Vertebrata (including the classes of fishes, batrachia, reptiles, birds, and mammals). The old subkingdom of Vermes is now found to cover a diverse collection of unrelated or slightly related forms, of more or less worm-like structure, among the most interesting of which are the Tunicata, from their seeming position as ancestral forms of the Vertebrata. The story of animal development has grown more intricate with every attempt to unfold it, new problems constantly arising, and, despite all that has been and is being done for its elucidation, no system of classification to-day existing can be given as in any sense the last word on the subject. While the great main features of the system of animal life are definitely settled, many of those of minor consequence remain open, and there is yet much to be done before a fully satisfactory scheme can be advanced.—*Cell Theory.* The employment of the microscope in zoölogical research, first by Malpighi and Leeuwenhoek, and subsequently by a host of others, led to a vast series of discoveries in physiology and the anatomy of tissues, and finally to the cell-theory, first advanced by Schwann in 1839, which has revolutionized all pre-existing biological conceptions. Since that date the study of the cell has gone on unceasingly, the peculiar structure of its nucleus being discovered, and the potentiality of the cell and its contained protoplasm in the life activities traced. While the cell is the constituent unit of the whole body, and the principal seat of its chemical, physiological, and morphological changes, it plays an equally prominent part in the processes of reproduction, these being dependent upon the union of two cells of opposite sexual origin, the combination of the nuclei of these cells, their subsequent growth and division into a multitude of new cells, and the segregation of these cells into the organs and tissues of the new organism.—*Embryology.* The study of the cellular unit of organisms is but one of the new uses to which the microscope has been put. That of the development of organisms in their embryological stage has proved equally important, and has led to many discoveries of the highest value in zoölogical research. The old doctrine of preformation has been completely overturned, it being clearly recognized that all life begins in a simple cell, from which the organs of the new structure gradually develop, though we cannot well avoid the conclusion that the molecules of the cell-substance possess predisposing activities tending toward the coming organism. Embryology has played an essential part in the new views of classification, the embryo revealing in its development secrets of its ancestry of the most vital significance, such as that of

the former gill-breathing habit of the higher vertebrates.—*Palæontology.* The results of embryological study have been in considerable measure borne out by those of palæontology, which may be looked upon as the embryology of races as distinguished from that of individuals. Research into the characteristic features and zoölogical relations of fossil forms has aided greatly in the growth of new conceptions, and in the development of a system of classification based on all the facts of life, morphological, histological, embryological, &c. The study of the *geographical distribution* of animals is another element to be considered in a review of the new zoölogy. The facts of distribution, first systematized by Sclater in 1857, have since then been closely studied by Wallace and others; and these, combined with the growing knowledge of the geological distribution of animals, have led to clear conceptions of their migrations, and furnished many new arguments in favor of the Darwinian theory of descent. The study of marine fauna, both of the littoral regions and the deep sea, has played its part in this reorganization of zoölogical conceptions, yielding a host of significant facts to add to those derived from anatomical, embryological, and palæontological research. The practical experiment of sounding the ocean depths as a preliminary to electric cable laying first taught zoölogists that the depths of the sea held a yet unstudied fauna, and set in train that series of dredgings which have embraced a vast expanse of ocean area and led to a multitude of strange and suggestive discoveries. In addition, seashore studies have grown more active, laboratories for this purpose being founded in various localities, and the microscope diligently employed in connection with the many other modern methods of research. The stimulus given to study has also led to the voyaging of naturalists to distant lands for the purpose of studying on the spot the animal life of new regions, and of conducting anatomical and embryological researches with the advantage of living material, in place of being confined to the use of alcoholic specimens brought home by collectors. Among the most important of these journeys may be mentioned that of W. H. Caldwell to Australia (1885–86), to study the embryology of the *Monotremata* and of the Dipnoid fish *Ceratodus;* of Sedgwick to the Cape to study *Peripatus;* of Bateson to Maryland to study *Balanoglossus;* and of the brothers Sarasin to Ceylon to study the embryology of the *Cæcilia.* An important result of these researches was the discovery that the mammalian Monotremata lay eggs like birds and reptiles.—*Theories of Descent.* Darwin's evolutionary theory of animal descent embraces two factors, heredity and variation, the influence of the former being toward the close preservation of race characteristics, that of the latter toward divergence from these characteristics, the former acting to check variation, the latter to accumulate slight variations, and at rare intervals produce permanent specific changes. Many recent zoölogists hold that these influences are not alone sufficient to produce the changes which have taken place, and claim that the facts of zoölogy indicate that other influences besides the preservation of fortuitous variations have been necessary to the development of new species. The views of Lamarck have been revived in the Neo-Lamarckian theory, to the effect that changes in the organism due to "use and effort," or the strain to effect certain objects, are capable of transmission to offspring, and that such a "transmission of acquired characters" has had much to do with the evolution of organic forms. This theory has been vigorously combatted by August Weismann, who is the author of a theory of reproduction which controverts any such inheritance. Both sides have gained a strong body of adherents, and an effort has been made on the one hand to prove that acquired characters can be and are inherited, on the other hand to disprove these seeming facts, with the result that at the present time no definite decision has been reached on the question, which remains one of the open problems of the science of Biology. See ANATOMY; BIOLOGY; CELL; EMBRYOLOGY; EVOLUTION; DARWINISM; PHYSIOLOGY; PROTOPLASM; NEO-LAMARCKISM; VERTEBRATA; ANATOMY, COMPARATIVE, &c.

Zoomorph'ism, *n.* [Gr. *zoon,* and *morphe,* shape.] The transformation of men into beasts.

Zoön'omy, *n.* [Gr. *zoon,* and *monos,* a law.] The science treating of laws which govern the organic action of animals in general; the physiology of animals.

Zooph'agous, *a.* [Gr. *zoon,* and *phago,* to eat.] That feeds on animals; carnivorous.

Zoophyte (*zō'o-fīt*), *n.* [Gr. *zoon,* an animal, and *phuton,* a plant, from *phuō,* to bring forth, to spring forth.] (*Zoöl.*) A term employed by Cuvier as a substitute for *Radiates,* viz., to designate the lowest primary divisions of the animal kingdom, which includes many animal organisms that are fixed to a definite spot of rock, shell, &c., and have the form of plants. The term is now never used by scientific naturalists, the plant-like animals comprising the class of *Polypi,* or *Polyps.* See POLYPUS.

Zo'osperm, *n.* One of the spermatozoa of an animal.

Zo'ospore, *n.* (*Bot.*) The name given to those spores, or seeds of acotyledonous plants, which being furnished with cilia, move spontaneously for a short time after being discharged from the spore-case of the parent-plant. The purpose served by the ciliary motion in zoöspores is evidently the wider diffusion of seeds; and the cessation of the motion after a certain time permits the seed to become fixed, in order to germinate. Zoöspores are found in *Characeæ, Algæ, Fungi,* and *Lichens.*

Zootom'ical, *a.* Belonging to zoötomy.

Zoot'omist, *n.* One versed in zoötomy.

Zoot'omy, *n.* [Gr. *zoon,* and *temno,* I cut.] That branch of anatomical science which relates to the structure of animals generally.

Zoroas'ter, ZARATHUSTRA, or ZERDUSHT, the great legislator, prophet, and reformer of the religion of the Parsees, called by Plato a son of Oromages (*Ormuzd*). Of his personal history nothing is known. By some *Z.* is said to be a contemporary of Darius Hystaspes; by others he is placed many hundred, or even many thousand, years earlier. It is of chief moment to recognize him as the earliest systematic expounder of that solution of the Mystery of Evil, which may be termed *Spiritual Dualism.* He imagined two mighty spirits in contest—*Ormuzd* and *Ahriman*—GOD and the DEVIL; and in this he most probably reproduces an older mythology of the Parsee race. Ormuzd was conceived by *Z.* as symbolized by light; the sun a visible type of him; and fire the expression of his energy. Fire-worship spread extensively throughout India and Higher Asia; but, as usual, it became a superstition. Schism followed on the death of *Z.,* who, any more than other great men, had no true successor.

Zos'ter, *n.* [Gr., a girdle.] A kind of tetter; shingles.

Zos'tera, *n.* (*Bot.*) The typical genus of the order ZOSTERACEÆ (*q. v.*).

Zostera'ceæ, *n.* (*Bot.*) The Sea-wrack family, an order of plants, alliance *Hydrales,* comprising a small number of marine plants having the habit of seaweeds. The most interesting species is *Zostera marina,* the Sea-wrack, which is in common use for packing, and for stuffing chairs and mattresses. Its fibers have been recommended as a substitute for cotton.

Zouave', *n.* (*Mil.*) One of a body of troops in the French army, wearing the Moorish dress;—so called from a Kabile people inhabiting a mountainous district between Bougie and Dellis, in Algeria, known as the Zouaoua, and also called Zouaouas, who, to the number of 2,000, were organized into a regular body of troops in 1830. Gradually the enlistment of natives ceased, and the force consists almost exclusively of Frenchmen.—There are also regiments of zouaves in the militia of several of our states.

Zschokke (*tshok'ĕ*), JOHANN HEINRICH DANIEL, a popular German writer, born at Magdeburg, 1771, who took up his residence in Switzerland, where he was successively employed as the head of an educational establishment, governor of Basle, and, after the federal union of Switzerland, in 1803, member of the council of Forests and Mines. He was a voluminous and versatile writer, his principal works being:—*Historical Memoirs of the Swiss Revolution; History of Switzerland for the Swiss People;* many novels, which have been translated into English; and his autobiography, which has also appeared in an English version. Died in 1848.

Zschoppau (*tshop'-pou*), a river of Saxony, rises in the N. slope of the Fichtelerbirge mountains, near the border of Bohemia, and falls into the Mulde, after a N.W. course of 60 m.—A town on the above river, 8 m. S.E. of Chemnitz. *Manuf.* Woollens, cottons, hosiery, porcelain, &c. *Pop.* 6,950.

Zug (*tsoog*), a lake of Switzerland, in the S.W. of the canton of Zug, 9 m. long, and about 3 m. broad, receives the Lorze, which enters it from Lake Ægeri.—The smallest of the Swiss cantons, in the center of the country, surrounded by the cantons of Zurich, Schwyz, Lucerne, and Aargau; *area,* 85 sq. m. *Desc.* Mountainous and fertile. The highest summit is the Kaiserstock, 8,258 ft. above the sea. *Rivers.* The Reuss and the Sihl. *Lakes.* The Zug and Ægeri. *Prod.* Grapes, butter, and cheese. Cattle-rearing and fishing are also eagerly pursued. *Manuf.* Silk, paper, cotton-spinning, and tanning. *Pop.* (1897) 24,100.—Zug, the cap, is on the E. of the Lake Zug, 15 m. from Zurich. *Pop.* 4,300.

Zulia, or SULIA (*soo'le-a*), a river of South America, which rises in the N. of the Republic of Colombia, and flows into Lake Maracaybo, in Venezuela, after a N.N.E. course of 180 m.—A dept. of Venezuela, bordering on the Caribbean Sea and the Republic of Colombia; Lat. between 8° and 12° N., Lon. 68° and 73° W. In the center is Lake Maracaybo. *Cap.* Maracaybo. *Pop.* abt. 154,000.

Zullichau (*tsool'le-kou*), a town of Prussia, prov. of Brandenburg, on the Oder, 43 m. E.S.E. of Frankfort. *Manuf.* Woollens, linens, and leather. Near this town, July 23, 1759, the Prussians, under Gen. Wedel, were defeated by the Russians. *Pop.* 5,500.

Zum'bro, a river of *Minnesota,* formed by the junction of two branches of the S.W. of Wabasha co., and flowing E., enters the Mississippi a few miles below Wabasha.

Zumpango (*soom-pang'go*), a town of Mexico, 30 m. N. of the City of Mexico. *Pop.* about 1,800.

Zuni (*zoon-yee'*), in *New Mexico,* an Indian town of Socorro co. *Pop.* about 2,500. See PUEBLO INDIANS.

Zuni Mountains, a range in *New Mexico,* about Lat. 35° N., Lon. 108° 20′ W.

Zurich (*zoo'rik*), a lake of Switzerland, extending in the form of a crescent, chiefly through the canton of Zurich, but partly, also, between the cantons of Schwyz and St. Gall. It is divided into the Upper and Lower by the strait at Rapperschwyl, which, the breadth being little more than a quarter of a mile, is crossed by a long wooden bridge. *Ext.* 23 m. long, and from ½ to 2¾ broad. *Z.,* without rivalling the lakes of Geneva or Lucerne in sublimity of scenery, is still one of the finest in Europe, being surrounded by a populous and well-cultivated country, and the prospect of its banks being richly varied. It abounds in fish, receives the Linth, and is traversed by steamboats.—A N. canton, having E. Thurgau, W. Aargau, S. Schwyz and Zug, and N. Schaffhausen; *area,* 687 sq. m. *Desc.* Fertile and well cultivated. The general aspect of its territory is pleasant, though without that bold and magnificent scenery which marks the interior and south of Switzerland. The hills, which do not rise above 3,200 feet, are separated by beautiful valleys and lakes. Rich pastures and extensive orchards meet the eye in every direction. *Rivers.* The Rhine, Thur, Toss, Glatt, Limmat, Sihl, and Reuss. *Lakes.* A considerable portion of Zurich, and several smaller lakes. *Prod.* Corn, potatoes, and fruits. There are many mineral springs. *Manuf. Z.* is one of the most industrious cantons of Switzerland. Cotton, silk, and ribbons are the chief manufactures. *Z.* holds the first rank in the Swiss confederation. Its territory was the scene of important military operations in 1798 and 1799. *P.* (1897) 362,750.—A city, cap. of the above canton, stands on the river Limmat, at the N. extremity of the Lake of Zurich, in a narrow valley between the hills, 56 m. N.E. of Bern. It contains very few buildings of note. The town-hall is large, but inelegant; and of its several churches, none are entitled to notice. On the other hand, the beauty of the scenery is striking, and there are a number of beautiful promenades around the town. Its university was established in 1832; and it has several polytechnic schools, a public library, botanic garden, and many learned societies. *Manuf.* Important; consisting of silks, cottons, ribbons, dye-works, and tanneries. Gessner, Lavater, and Pestalozzi were born here. Near *Z.,* in 1443, the Swiss defeated the Austrians; in 1799 the French defeated the Russians and Austrians. In 1859 a treaty between France, Austria, and Italy was signed here, and Lombardy was sold by Austria to the king of Italy for $50,000,000. *Pop.* with suburbs (1897) 115,280.

Zur'lite, *n.* (*Min.*) A variety of Melilite of an asparagus-green color inclining to gray, which occurs at Vesuvius, generally in large rectangular prisms.

Zuru'ma, a river of Brazilian Guiana, which joins the Takutu in Lat. 3° 2′ N., Lon. 60° W., after a S.E. course of 80 m.

Zuruma, a town of Ecuador, dept. of Assuay, 28 m. N. W. of Loxa; *pop.* abt. 7,000.

Zutphen, (*zoot'fen.*) a fortified city of the Netherlands, prov. of Gelderland, at the confluence of the Yssel and Benkel, 16 m. N.N.E. of Arnheim. *Manuf.* Cotton, paper, glue, and tanneries.

Zuyder-Zee, or **Zuider-Zee,** (*zi'der-ze,*) a gulf of the German Ocean, in Holland, 45 m. by 35 m., once a lake, but by an inundation in 1282, united to the German Ocean. The reclamation of the *Z.* by the govt. will reclaim about 500,000 acres, valued at $160 per a.; total cost $46,000,000, and will take ten years to complete.

Zvor'nik, a town of European Turkey, in Bosnia, on the Drin, 78 m. S.W. of Belgrade.

Zwarte Berg, (*zwart bairg,*) ("Black Mountain,") two mountain ranges in Cape Colony, S. Africa, one of which, in parts, attains an elevation of 4,000 feet.

Zwel'lendam, a dist. of Cape Colony, extending E. from Cape Town, and bounded N. by the Zwarte Berg; *area,* 7,620 sq. m. *Desc.* Mountainous, and watered by the river Breede. *Prod.* Corn, butter, and wine. *Manuf.* Soap and brandy. *Cap.* Zwellendam. *Pop.* 14,300.

Zwingli, or **Zuinglius,** ULRIC, (*zwin-glē.*) a Swiss reformer and patriot, B. in the hamlet of Wildhaus, in the Tockenburg, Jan. 1, 1484. After receiving instruction from his uncle, parish priest of Wesen, he was sent to study first at Basel, then at Bern, and afterwards at Vienna. At the age of 18 he returned to his native village, but only to quit it again almost immediately, and renew his studies at Basel. He applied himself to scholastic theology, but gave it up in disgust as a mere waste of time, and soon after rejoiced to hear the teaching of Thomas Wittenbach. *Z.* eagerly studied the classics, and became one of the best scholars of his time. He was also passionately fond of music, and learnt to play well on the flute, the lute, the violin, and other instruments. In 1506 he was ordained priest—he had been master of arts for several years—and accepted the place of pastor of Glarus, which he filled with zeal and devotedness for ten years. During this period thoughts were working in his mind, which were the germs of the reformation to come. He twice accompanied the Swiss auxiliaries to the wars in Italy, fought at the battle of Marignano; and used his influence with his countrymen to dissuade them from foreign military service. In 1514 he had visited Erasmus at Basel, and was greatly influenced by his writings. The year of 1516 *Z.* has noted as the period of the commencement of the Swiss Reformation. That same year he removed to the secluded monastery of Einsiedlen, of which he was appointed priest and preacher. His clear and eloquent announcement of scriptural truth astonished his new hearers, and drew crowds from the surrounding country to hear him. In 1519, through his high reputation for learning, piety, and eloquence, and the active influence of his friend Oswald Myconius, *Z.* was appointed preacher at the cathedral of Zurich, and was thus brought into the centre of the political movement of Switzerland. His preaching produced immense excitement by its novelty; but while most were charmed, not a few were alarmed and angry. In the autumn of the same year he was attacked by the plague (known then as the "great death"), and it was reported that he was dead. He, however, recovered, and with a new vigor and devotedness, and fulness, resumed his work. In 1522 began the action of the court of Rome against the Reformation in Switzerland; the bishop of Constance, by letter to the chapter at Zurich, attempted to stop the preaching of *Z.* The latter replied in his *Architeles,* and the attempt failed. But an order of the Diet was soon after obtained, which prohibited preaching against the monks. About the same time *Z.* married Anna Reinhold, a widow, and mother of *Z.*'s beloved disciple and friend, Gerold. He did not make his marriage known

till two years later. Meanwhile enmity was growing into persecution, and the reformer was sometimes overwhelmed with the foreboding of evil to come, and the failure of his hopes. Early in 1523 a conference between the advocates and opponents of the new doctrines was held at Zurich, by order of the Great Council; but the discussions, which lasted three days, left the controversy as it was: the reformers arguing on the basis of Scripture, and their opponents from the canon law, and there being no first principles in common with them. Not long after the reformation was publicly established in Zurich, pictures and statues, &c., were taken out of the churches, and instead of the mass a simple form of celebrating the Lord's Supper was adopted. Education was provided for, and convents were suppressed, just regard being had to the interests of their inmates. In 1528, *Z.* attended the important conferences of Baden, and in 1529 that of Marburg, where he agreed on certain articles of faith with Luther and Melancthon. Two years later, the long suppressed enmity of the cantons which remained Catholic broke out in open war against Zurich and Berne. Delay, indecision, and half-heartedness among the citizens of Zurich made their cause hopeless; and at the battle of Cappel their handful of disorderly troops was easily destroyed or dispersed by the superior numbers and discipline of the Catholic army. *Z.* fell on that field, October 11, 1531. His body was discovered, burnt, quartered, and his ashes mingled with those of swine, and scattered to the winds. The works of *Z.* were published in 1581 in 3 vols. 4to.

Zwickau, (*tswik'-kou,*) a town of Saxony, on the Mulde, 60 m. S.W. of Dresden. *Manuf.* Woollens, cottons, and chemicals.

Zwittau, (*tswit'tou,*) a river of Austria, in Moravia, —A town of Moravia, 37 m. N.W. of Olmutz.

Zwolle (*zwol*), a fortified town of the Netherlands, C. of Overyssel, on the Zwarte Water. *Z.* was a free imperial city of the Hanseatic League. After the expulsion of the Catholics in 1580, it joined the States General. In 1672 it surrendered to Galen, the warrior bishop of Munster.

Zygadite, *n.* (*Min.*) A silicate of alumina and lithia, found in thin tabular prisms, and in twins like albite, and of a reddish or yellowish-white color, in the Harz.

Zygæ'na, *n.* (*Zoöl.*) A genus of fishes, fam. *Squalidæ*, which has the head flattened horizontally, with the sides much extended laterally. The Hammer-head Shark, *Z. malleus*, attains the length of twelve feet, and is bold and ferocious.

Zygodactyl'ic, Zygodac'tylous, *a.* (*Zoöl.*) Having the toes joined in pairs, as the parrot tribe.

Zygo'ma, *n.* [Gr., from *zygon*, a yoke.] (*Anat.*) The cavity under the zygomatic process of the temporal bone.

Zygomat'ic, *a.* (*Anat.*) Pertaining to the zygoma, or to the bony arch under which the temporal muscles pass.

Zygophyllaceæ, (*zi'go-fil-lā'se-ē,*) *n.* (*Bot.*) The Bean-caper or Guaiacum family, an order of plants, alliance *Rutales*, having the following essential character: — Herbs, shrubs, or trees, with opposite stipulate leaves, without dots. Calyx and corolla with a quaternary or quinary distribution; the former convolute in æstivation, the latter with unguiculate petals and imbricated. Stamens 8–10, hypogynous, usually arising from back of scales. Ovary 4–5-celled; style simple. Fruit 4- or 5-celled. Seeds few, with little or no albumen; radicle superior; cotyledons foliaceous. The plants of the order are generally distributed throughout the warm regions of the globe, but chiefly beyond the tropics. See Guaiacum, and Zygophyllum.

Zygophyl'lum, *n.* (*Bot.*) A gen. of plants, ord. *Zygophyllaceæ*. *Z. fabago*, the bean caper, derives its common name from the circumstance of its flower-buds being used in some parts of the world as substitutes for common capers. This plant is reputed to possess valuable anthelmintic properties.

Zymolog'ic, Zymolog'ical, *a.* Relating to zymology.

Zymol'ogist, *n.* One versed in zymology.

Zymol'ogy, *n.* [Gr. *zyme*, ferment, and *logos*, a discourse.] The doctrine of fermentation; a treatise on the fermentation of liquids: zymology.

Zymom'eter, Zymosim'eter, *n.* A zumometer; a Saccharometer, *q. v.*

Zymo'sis, *n.* [Gr., fermentation.] (*Med.*) An epidemic, endemic, or contagious affection.

Zymot'ic Diseases, *n.* [Gr. *zumoo*, I ferment.] (*Med.*) A designation recently introduced, and applied to diseases which are epidemic, endemic, or contagious, as well as such as result from the scarcity and the deterioration of the necessary kinds of food, or from parasitic animals. They are divided into four orders, — *miasmatic*, *enthetic*, *dietic*, and *parasitic*, of which fever, syphilis, scurvy, and worms, may be taken as the respective types.

Zythep'sary, *n.* [Gr. *zythos*, zythum, and *echo*, to boil.] A brewery.

Zy'thomierz, or Jitomir, a town of Russian Poland, cap. of the govt. of Volhynia, on the river Teterev, an affluent of the Dnieper, 80 m. S.W. of Kiev. Lat. 50° 15′ N., Lon. 28° 40′ E. *Manuf.* Cloth, mats, leather, &c. *Pop.* 33,717.

Zy'thum, *n.* [Lat.; Gr. *zythos.*] A kind of malt liquor.

Z.—SECTION II.

Zalin'ski, EDMUND LOUIS GRAY, soldier, was born in Kurnick, Prussian Poland, Dec. 13, 1849; removed to the U. S. in 1863; was educated at Syracuse; entered the Union army at the age of fifteen as volunteer aid-de-camp on the staff of Gen. Nelson A. Miles, remaining in his service until the close of the war; mustered out of the service in 1865, commissioned second-lieutenant, later promoted captain of artillery. He is well known in connection with the Zalinski pneumatic dynamite gun.

Zama (*zah'mah*). (*Anc. Geog.*) A city and fortress in Numidia, about 300 m. S.W. of Carthage, near which Hannibal was defeated by the Younger Scipio, 201 B. C. The tower of Hannibal's forces consisted of a small veteran army that had shared his fortunes for many years; most of the rest were of inferior quality, of many races, variously organized, and of suspicious fidelity. But his greatest deficiency was in cavalry, an arm with which he had repeatedly decided the victory in former battles. In Scipio's army, on the other hand, Numidians, under Masinissa, were present in overwhelming numbers. The onset of Hannibal's elephants, of which he had 80, was defeated and made worse than useless by the wise precautions of Scipio; the cavalry on his flanks were scattered by the furious charge of Masinissa and Lælius; his front line of mercenaries beaten back by the more numerous and better-disciplined Romans. His veteran infantry, hemmed in on all sides, fought with the courage of despair, and were cut to pieces. Hannibal having done everything, both before and during the battle, which could secure the victory, escaped with a few horsemen. Of the Carthaginians, 20,000 were left dead on the field, and an equal number taken prisoners. Of the victors, 2,000 fell in the action.

Zambesi (*zam-b'zi*), a large river of southeast Africa, ranking with the Congo and the Nile as a main channel of communication with the interior of the continent, its total length being about 1,600 miles, largely navigable, though the frequent cataracts and rapids reduce the navigable waters to stretches of 100 to 200 miles in length. Rising in the marshy country to the W. of Lake Bangweolo, it flows through Lake Dilolo, at the S.W. corner of the Congo Free State, about lat. 11° 40′ S., lon. 22° 20′ E. Thence it makes its way to the Indian Ocean, draining in its course more than 500,000 sq. m. of territory, and receiving numerous tributaries, the largest being the Loamma, Lonugwa, Kafue, and Shiré, the last, which connects it with Lake Nyassa, being navigable except at the Murchison Falls. Most notable of its cataracts is the Victoria Falls, 900 miles from the sea, and one of the grandest cataracts of the world. These falls were discovered and named by Livingstone in 1855, the native name being Mosivanunya. Here a huge fissure in the earth's surface crosses the course of the river, and the stream, 1,000 yards wide, pours vertically downward to a depth of 360 feet. Beyond this point the river is in part navigable for 700 miles. South of the falls it is navigable, with occasional interruptions, to the sea. The delta, 2,500 sq. m. in area, is traversed by four branches, mostly blocked by sand, the Chinde and Kongoni being the ones used by vessels. On the Zambesi are the important trading towns of Senna, 130 miles inland; Tete, 190 miles farther, a center of the gold and ivory trade; and Zumbo, 550 miles inland. At Mazaro, 60 miles from its mouth, the river is a mile wide, but its depth of channel declines to 4½ feet in the dry season, and navigation cannot be successfully and continuously conducted by vessels of more than about 18 inches draught. Ninety miles above Senna the swift current at the Lupati gorge checks navigation, and at Tete the Kebrabassa Falls break the channel. Like the Nile, the Zambesi has annual inundations which flood the country and cultivate many of the minor falls and rapids.

Zambe'sia. (*Geog.*) The name given to that portion of the British South African protectorate which is traversed by the Zambesi river, and often applied to to the whole country under the control of the British South Africa Company. South Zambesia (southward from the river) comprises Mashonaland, Matabeleland, Khama, and a part of Manica. North Zambesia extends from the river to Katunga, on Lake Tanganyika, and is bounded on the east by the west shore of Lake Nyassa. It also includes the Shiré Highlands. The South Africa Company obtained a charter for this district, formerly chiefly known as a hunting ground for large game, in October, 1889, the Dukes of Abercorn and Fife being president and vice-president, and Cecil J. Rhodes managing director. The energetic administration of the latter has won for the country the popular title of RHODESIA. The gold deposits of the Transvaal extend into this territory, in which are found relics of mining operations of some ancient civilized people, who have left remains of buildings and a very strong stone fortress known as Zimbabye, or Great Zimbabwe. There are now thriving towns at Salisbury, Victoria, and Umtali. This region was the seat of the Jameson raid into the South African Republic (1895–96), and of hotly contested conflicts with the natives.

Za'mia, *n.* (*Bot.*) A genus of plants, order *Cycadaceæ*, consisting of moderate-sized trees, having much of the appearance of palms, and in some particulars of ferns. They have stout, generally unbranched stems, terminated by tufts of thick pinnated leaves, often spiny at the margins or points. (Fig. 832.) The species are natives of Central America, the West Indies, the Cape of Good Hope, and southeastern Africa, where they frequently constitute a conspicuous feature in the vegetation. The stems of these plants contain an abundance of starchy matter, which is sometimes collected and used as arrowroot. *Z. tenuis* and *Z. furfuracea* are employed for this purpose in the Bahamas; while *Z. integrifolia*, or *countie*, the only cycad found in the U. S., has a short, mostly subterraneau stem, from which *Florida arrowroot* is obtained.

Zan'clidæ, *n.* (*Ichth.*) A small family of Oriental fishes, related to the brilliant coral-fishes (*Chætodontidæ*), and represented by a small species, *Zanclus cornutus*, having a horn on its head. For this, or some other reason, this little fish is held in so great reverence by Malay fishermen that they are accustomed, when it is caught in their nets, to bow to it, requesting its pardon, and gently return it to the water, notwithstanding the excellence of its flesh as food.

Zanes'ville, in *Ohio*, a city, cap. of Muskingum co., 59 m. E. of Columbus. It is largely engaged in manufacturing, having extensive encaustic tile works, brick works, woollen mills, cotton mills, hosiery factory, several engine shops and stove foundries, flour mills, rolling mills, glass works, potteries, and breweries. An active center of trade. *Pop.* (1897) 23,550.

Zang'will, ISRAEL, writer, was born in London, Eng., in 1864. As a boy in school he was the prize-taker; he taught for a time at Spitalfields, where he had formerly been a pupil. Later he abandoned teaching for journalism, making an effort to establish a serial of his own, called *Ariel, The London Puck*, but without success. He next published *The Bachelor's Club*, which at once attracted favorable notice. The next year he published his unique novel, *The Children of the Ghetto;* and from that day the fame and success of Zangwill were assured. He followed this with the *King of the Schnorrers* (1894) and *Ghetto Tragedies*. His novel *The Master* appeared in 1894. Under the caption *Without Prejudice*, he contributed to the *Pall Mall Magazine* a series of popular criticisms, and under the head of *Men, Women, and Books*, he wrote a similar column for the New York *Critic*.

Zante (*zant*, or *zon'te;* anc. *Zacynthus*), one of the Ionian Islands, at a short distance to the S. of Cephalonia, and to the W. of ancient Elis, in the Morea, or Peloponnesus; Lat. 37° 54′ N. *Ext.* 23½ m. long, and from 6 to 11 broad. It is the finest of the Ionian Islands, richly cultivated, and covered with villages, embosomed in olive plantations. *Climate.* Extremely hot in summer, but not unhealthy. *Prod.* Currants, olives, and other fruits of a warm latitude. *Pop.* (1897) 44,000.—ZANTE, the cap., on the eastern coast, is about 12 m. nearly W. of Cape Tornese, in the Morea. It is pleasantly situated at the foot of a small bay; and in its appearance it resembles an Italian town. Its harbor is capacious; and its environs are extremely pleasant and picturesque. It is the largest town in the Ionian Islands, and is the see of a Roman Catholic bishop. In Oct., 1841, it was nearly destroyed by an earthquake. *Pop.* (1897) 16,900.

Zapa'ta, in *Texas*, a S. co.; *area*, 1,370 sq. m.; bounded W. by Rio Grande del Norte. *Surface*, undulating; *soil*, fertile and adapted to stock raising. *Cap.* Carrizo. *Pop.* (1897) 4,150.

Zava'la, in *Texas*, a S.W. co.; *area*, 1,200 sq. m.; drained by Nueces river and some smaller streams. *Surface*, nearly level; *soil*, suited only for stock raising. *Cap.* Batesville. *Pop.* (1897) 1,280.

Ze'a, *n.* (*Bot.*) A genus of plant, order *Graminaceæ*, of which *Z. mays*, or maize, is the well-known and important cereal so largely grown in the United States of America, where it is generally known under the name of INDIAN CORN. See INDIAN CORN.

Zea'land (a province of Holland). See HOLLAND.

Zealand, the largest island in the Baltic Sea, and the most important province of Denmark, lies at the S. of the Cattegat; *area*, 2,675 sq. m. The soil is extremely fertile, and yields large crops of all kinds of grain, especially of barley. The rearing of cattle is also generally followed, and, with an extensive dairy produce, forms the great wealth of the state. The chief manufactures of Denmark are conducted in Z. The principal towns are the capital of the kingdom, Copenhagen; Roeskilde, the ancient seat of government; and Elsinore. It is also called SEE'LAND (Danish, *Sjelland*).

Zealand, New. An important colony of Great Britain, in the South Pacific Ocean, comprising three main islands and numerous islets. These are North Island, or New Ulster; South or Middle Island, or New Munster; and Stewart Island, or New Leinster. North and South Islands are long and narrow, the total length of the group being 1,100 miles; area, 106,240 sq. miles—that of North Island being 44,467, South Island 58,525, Stewart Island 665. They lie S.E. of Australia, 1,175 miles distant, and 850 miles from Tasmania, between latitude 34° 22′ and 47° 18′ S., and longitude 166° 27′ and 178° 34′ W. Several island groups in the South Pacific are attached to the colony, including the Chatham, Auckland, Kermadec, Campbell, Bounty, and Antipodes groups.—*Phys. Conditions.* North and South Islands are both mountainous, especially the latter, each being traversed by a great mountain chain, which divides them into eastern and western sides. Two-thirds of South Island is covered by mountains, whose culminating point is Mount Cook, 12,349 feet high. They possess great glaciers and give birth to numerous rivers, all having a rapid fall and being liable to sudden floods. North Island contains extensive plains of low elevation and great fertility, besides large areas of grassy hill country. Much of the best land is covered by luxuriant forests, which cover the mountains to a height of 4,000 feet. South Island, on the contrary, contains little timber, its mountains and lowlands being alike open and yielding excellent pasture. The result has been that the best lands of this island have been taken up, while vast tracts of fine land in North Island remain uncleared. The coast line presents numerous excellent harbors, particularly in the northern half of North Island, which is deeply indented by the sea.—*Geol.* The mountain-chains of New Zealand are of great antiquity, and its rock strata extend through all the geological ages, and are well marked by fossils. Volcanic action seems to have been long vigorous, though now much decreased. North Island possesses a wonderland resembling the Yellowstone Park in character, being remarkable for its boiling geysers, steaming fumaroles, sulphur basins, and hot lakes and pools, of great curative value for rheumatic complaints and skin diseases. The exquisite siliceous pink and white terraces of Rotomahana, once famous for their beauty, were utterly destroyed, in 1886, by a volcanic explosion of the neighboring Mt. Tarawera.—*Climate.* New Zealand possesses a very healthful and equable climate, though presenting great variety from its wide extension in latitude and its diversity of elevation. The air is constantly freshened by sea breezes, the country everywhere well watered, and prolonged droughts are unknown. Snow seldom falls in the lowlands, and quickly melts. The winter mildness allowing cattle and horses to be kept the year through in the fields.—*Fauna and Flora.* The native land animals of New Zealand are few, comprising but two species of bats, as examples of the mammalia. A few small lizards come next in importance. The domesticated animals of Europe have been introduced, among them rabbits, which have become a nuisance from their numbers. The birds formerly included the gigantic moas, and now embrace the wingless apteryx, several species of parrots, and many introduced birds, including the black swan of Australia. Bees have multiplied remarkably, and several fresh-water fishes have been introduced with success. The same is the case with European grasses and weeds, which alike grow luxuriantly. The native plants include immense tree-ferns, a valuable flax, grasses excellent for pasture, and various trees of much economic value, the most important being the great kauri-pine, which grows to a height of from 120 to 160 feet and a diameter of 5 to 12 feet, and is greatly used for spars.—*Min.* Gold is the most important mineral product, the total produce to date being valued at more than $250,000,000. Silver, lead, copper, manganese, and antimony are mined in small quantities. Coal is abundant and of good quality, the total amount mined to date being about 9,000,000 tons. Brown coal and lignite are abundant, and the smelting of the iron sand of North Island is of growing importance.—*Soil and Productions.* New Zealand is the best adapted of the Australasian colonies to agricultural and pastoral pursuits, two-thirds of its area being suited for these purposes, of which one-fifth part is taken up, largely under lease from the government. Enough wheat is grown for home use, oats are extensively grown, and barley and hay are important crops. The great peninsula north of Mauukau Harbor possesses a humid, semi-tropical climate, and here the fruits of the warmer latitudes grow in great perfection, figs, oranges, lemons, grapes, olives, &c., being abundantly raised. This region is the home of the kauri-pine, and supplies most of the kauri-gum brought to market. This substance, found, like amber, as a fossil, yields over 8,000 tons a year. It is used as a base for fine varnishes. Much attention is given to pastoral pursuits, and the dairy products are large and increasing. The colony possesses more than 18,000,000 sheep, has an annual wool product amounting to over $20,000,000, and ships large quantities of salted, preserved, and frozen meats.—*Other Industries.* Manufactures are increasing under the stimulus of high protective duties, and com-

prise woollen goods, hosiery, blankets, soap, leather, paper, and other materials needed for home use. There is an increasing volume of foreign trade. Of the exports (about $50,000,000), wool is much the most important article, then meat, gold, grain, and kaurigum. The imports amount to about $35,000,000. The railways, over 2,000 miles long, are nearly all State property, and the same is the case with the telegraph and telephone lines.—*Govt.* A governor appointed by the crown is at the head of the administration, and the legislature consists of a Legislative Council, with members appointed for life, and a House of Representatives, elected for 3 years. There is no distinction of sex in voting, female suffrage having been adopted in 1893. The islands are divided into provincial districts and counties, in which a complete system of local government exists. Wellington, the capital, has a population of 31,000. Auckland (*pop.* 51,287) is the largest city. The other chief towns are Dunedin, Christchurch, Napier, New Plymouth, Nelson, &c. Stewart Island has but a sparse population.—*Educ.* The education of the people has been carefully provided for, elementary education being free and compulsory. There are numerous higher schools, many of them well endowed. The University of New Zealand, established by royal charter, is only an examining body, with power to grant degrees. Affiliated with it are Otago University, Dunedin; Canterbury College, Christchurch; and University College, Auckland.—*Natives.* The Maories, the name given themselves by the native race, are of Polynesian stock, they claiming to have come to New Zealand 27 generations ago. They probably displaced an earlier and darker race. They are a well-shaped and often handsome people of olive-brown hue, brave, generous, and warlike in disposition. Tattooing, once common among them, has almost died out. Cannibalism was formerly prevalent, but has disappeared. They were formerly in a chronic state of warfare, but are now engaged in farming, raising large crops, and keeping great numbers of sheep, though not very industrious. They are careful to have their children educated, have a special franchise, and elect 4 members to the House of Representatives, while two of their chiefs are in the Legislative Council. Formerly 100,000 in number, they are now but 42,000, nearly all living in North Island.—*Hist.* These islands were discovered and named by Tasman, in 1642, but were first closely investigated and described by Captain Cook, in 1769 and later. Early in the 19th century whaling ships visited the coast for trade, and the natives, being supplied with guns, quickly diminished through their tribal wars. To stop this disorder the British government took possession of the islands in 1840. By a treaty with the chiefs the native title to the soil was guaranteed, and every acre sold since has been duly paid for. Missionaries converted the natives to Christianity and encouraged them to a more peaceful mode of existence. Between 1843 and 1869 a series of insurrections took place, but since the latter date peace has prevailed, the natives being given a voice in the government in 1872. The capital was at Auckland till 1865, when it was removed to Wellington. *Pop.* (1891) 626,658 whites, nearly all of British origin, 41,953 Maories.

Zee. The more common name now of the letter *Z*, at least in the U. S., where the old names *zed* and *izzard* are seldom used.

Zeit'geist, *n.* [Ger.] The spirit of the age; the intellectual and moral tendencies of the time.

Zelay'a, José Santos, soldier, was born at Managua, Nicaragua, about 1845; joined the army, and became a general in 1885, and was the head of the Liberal party. He took part in the revolt that overthrew President Sacaza in 1893; and under the new Constitution, promulgated in the summer of that year, *Z.* was elected President Sept. 17, 1893. He occupied the Mosquito territory in 1894; and in May, 1895, British forces took possession of the port of Corinto. This action was on account of the alleged murder of a British subject, and the port was held for a few days as security for the payment of an indemnity; upon the agreement of *Z.* to make the payment the British force was withdrawn.

Ze'ro, Ab'solute. (*Physics.*) The point of temperature at which a body is wholly deprived of heat, and at which a perfect gas would exert no pressure. Various experiments have resulted in determining this point at —274° C., the equivalent of —461° F. According to received theories, all heat is the result of motion, and where an absolute state of rest occurs, without pressure, the temperature finds an absolute zero. There is, of course, no known limit in the other direction, as increased energy of some sort may always increase temperature.

Zerrahn (*z'r-rän'*), Carl, orchestral conductor, was born in Mecklenburg, Germany, July 28, 1826; removed to the U. S. (1848) as flutist in the Germania Orchestra; became conductor of the Boston Handel and Haydn Society (1854). He conducted for many years the Harvard Symphony Concerts and the Worcester annual festivals, and numerous choral and orchestral societies in the vicinity of Boston. He was one of the directors of the Peace Jubilee at Boston in 1869 and 1872.

Ze'ta, *n.* The sixth letter of the Greek alphabet, having the sound of English *zd* or *dz*.

Zeta, *n.* [Lat., from Gr. *diaita*, dwelling.] (*Arch.*) A little closet or chamber; especially a room in a church over the porch where the sexton lived and kept the church documents.

Zie'back, in *South Dakota*, a S. W. co.; *area*, 1,040 sq. m.; bounded N. and W. by South Fork of the Cheyenne river. Grazing and mining are the chief industries.

Zimb (*zĭm*), *n.* (*Zoöl.*) A fly exceedingly destructive to cattle in Abyssinia. It has not been identified, but resembles and is related to the tsetse (*q. v.*) of South Africa. It attacks not only cattle, but wild game, even the elephant and rhinoceros. It is not found, however, in open, dry, and sandy regions. The *zebub* of the Hebrews (Is. vii. 18) is regarded by Biblical scholars as identifiable with this insect.

Zim'merman, Agnes, pianist and composer, was born at Cologne, Germany, July 5, 1847; she went to England in 1851, and at the age of nine became a student under Cipriani Potter and Steggall at the Royal Academy of Music, obtaining the King's scholarship in 1862, and making her first appearance at the Crystal Palace in 1863. Since that time she has steadily grown in popular favor as a pianist, and her editions of Mozart's and Beethoven's sonatas are considered standard, while her own compositions are well known.

Zi'onism, *n.* This name is given to a scheme, advocated by some Jews in Europe, principally writers with more or less reputation, proposing the migration of all the Jews in the world to Palestine. The idea is that by a return to Palestine in sufficiently large numbers they can reinstate themselves as a nation and become a power in the world. Some even go so far as to dream that in view of the strategical importance of Palestine as controlling the future overland short cut to India, via the Euphrates Valley, the Jews, once in possession of the country, could afford facilities of transport to such of the European countries as they chose to befriend and refuse access to others. The scheme is violently opposed by many influential Jews, who affirm that millions of Jews are far better off in the countries which they now inhabit than they could possibly be in Palestine, and they point out that those who dream that Palestine could become a strong and independent state ruled by Jews are reckoning without Russia and France, not to speak of the Sultan of Turkey. The whole discussion so far has been academic, and the population of Palestine has not been sensibly increased by the proposed movement. If any have been persuaded to migrate, they are nearly all poor Hebrews, of whom there are already too many in Palestine.

Zith'er, or **Zith'ern,** *n.* [Ger., from Lat. *cithara*.] (*Mus.*) A stringed instrument, a development of the ancient cithara, that became a favorite with the Alpine peasantry in the early part of the 19th century, and was introduced into England about 1850. It has a flat sounding-board with a large hole near the middle, and from 32 to 46 strings, of steel, brass, catgut, and silk, covered with fine silver or copper wire, and tuned by pegs at one end. Five strings are stretched over a fretted keyboard, and are used to play the melody, being picked or struck with a plectrum in the right hand and stopped with the fingers of the left. The rest, called accompaniment strings, are struck by the first three fingers, and, not being stopped, produce only the single note to which they are tuned. The instrument rests on a table with the keyboard nearest the performer.

Zo-, Zoo-. An initial compounding term, derived from the Gr. *zōon*, animal.

Zoanthro'pia, or **Zoan'thropy,** *n.* [Gr. *zōon*, animal, and *anthrōpos*, man.] (*Path.*) A kind of monomania, in which the patient fancies himself transformed into one of the lower animals.

Zoetrope (*zo'e-trōp*), or Wheel of Life, *n.* [From Gr. *zoe*, life, and *trophe*, aliment.] (*Optics.*) An optical toy, so named from its exhibiting pictures of objects as if endowed with life and activity. It is of interest as being a forerunner of the principle perfected in the kinetoscope. The results shown in this instrument depend, primarily, on the well-known fact that vision "persists" for a certain short period of time after the excitation of the visual ray. It follows from this principle that if a series of pictures, representing the different attitudes successively assumed by an object in completing a given movement, be presented to the eye so quickly that the visual impression of each picture shall continue until the incidence of the one next following, the object will remain constantly in view, and its various parts will appear to execute the movement delineated by the pictures. The mechanical means for effecting this result will be understood from Fig. 3103, which represents the zoetrope in its most popular, but by no means most excellent form. C, a cylinder of strong cardboard, 12 inches in diameter and 1¾ inches in depth, with a metal rim at the top, and fastened to a circular piece of wood, B. The latter is screwed at its center to a pivot, P, which moves freely within the upright of the stand, S, and forms a vertical axis, round which the cylinder may be made to revolve with any desired rapidity; *a*, thirteen equidistant apertures each ⅛ inch in width, and 3 inches long. Each series of pictures is printed on a strip of thick paper, 3½ inches in breadth, and 36 inches in length. In using the instrument, the light should come from above. Some novel results may be obtained by withdrawing the eye a few inches from the aperture, when the pictures are seen *as sensibly diminished in breadth*, the explanation of which is as follows: The longer the time of visibility, the greater will be the onward movement of the picture while under view; therefore if the left-hand side of the picture come first into view, by the time the advance of the aperture permits of the right-hand side being seen, the latter will have progressed *toward* the left, and it will accordingly be seen relatively nearer to the left side than is its natural position. And this compression, of course, takes effect over the whole of the picture.

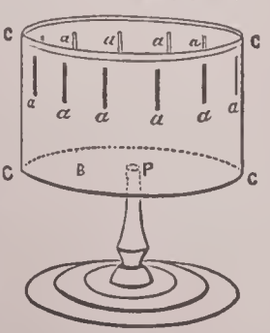

Fig. 3103.—Zoetrope.

Zo'ic, *a.* [Gr. *zoikos*.] Pertaining to, or characterized by, animals or animal life; especially in geology, applied to rocks that contain fossils, or bear evidence of coexistent animal life.

Zo'ism, *n.* [Gr. *zōē*, life.] The doctrine which holds that life originates from a specific principle, instead of being a mere resultant of combined forces.

Zo'la, Émile, novelist of the naturalistic school, was born in Paris, France, April 2, 1840, and educated at the Lycée St. Louis. Some of his early studies of Parisian low life were written for *Figaro*. He also wrote for *The Voltaire*. His first novel was *Contes à Ninon* (1863); others are *L'Assommoir*, and *Le Rêve*, which represent the two extremes of possibility in Zola's style. He repeatedly aspired to membership in the French Academy, but the conservative members obstinately refuse to admit him. In 1894 he published *Lourdes*, a novel that so offended the Roman Catholics that during a subsequent visit to Rome *Z.* was denied audience of the Pope. 1895 he published *Rome*, in which he described the [illegible]

Zonu'ridæ, *n. pl.* A family of small active tropical lizards, related to the "horned toade" (*q. v.*) of Western America. They are chiefly South African, where they are extremely numerous about rocky ledges in search of their insect-food.

Zoög'amy, *n.* [*Zoo*, and Gr. *gamos*, marriage.] (*Biol.*) Sexual generation; gamogenesis.

Zoögeog'raphy, *n.* (*Nat. Sci.*) The study of the distribution of animals over the surface of the earth, their migrations, &c.

Zoögy'roscope, *n.* An amplification of the *zoetrope* (*q. v.*), in which a series of successive photographs of an animal in motion are placed on a circular rotating glass, the photographs being alternately illuminated as the glass turns, throwing a single continuous ever-changing picture on a screen.

Zoöl'atry, *n.* [*Zoön*, and Gr. *latreia*, worship.] (*Compar. Relig.*) Animal-worship, or the adoration of a divinity in an animal; as in the crocodile-worship of the Egyptians, worship of the golden calf by the Hebrews, or the serpent-worship of Africans and North American Indians.

Zoön, *n.* [Gr.] (*Biol.*) The product of a fertilized ovum.—A developed individual of a compound animal.

Zoöprax'iscope, *n.* [*Zoö*, *praxis*, action, and *scope*.] See Stroboscope.

Zoöpraxog'raphy, *n.* [*Zoö*, *praxis*, action, and *graphy*.] The science which describes and illustrates the locomotion of animals.

Zoötech'nics, or **Zootech'ny,** *n.* [*Zoö* and *technē*, art.] The science which relates to the breeding and domestication of animals.

Zoöthop'sis, *n.* [Gr *zoo*, and *thopto*, to bury.] Premature burial of one supposed to be dead.

Zoril'la, *n.* (*Zoöl.*) A small mammal of South Africa (*Ictonyx zorilla*), related to the badgers and ratels, and to the American skunks. Its habits and appearance are skunk-like. It feeds upon small animals, and is frequently tamed and taught to catch mice in country houses; it also climbs trees and destroys bird's eggs and young. Like the skunk, too, it secretes within anal glands a liquor having an excessively offensive odor, which it may discharge under provocation to the dismay of every one within a long distance. The prevailing color of the glossy fur is black, with white bands and spots. A second species ranges northward into the Mediterranean region and Asia Minor.

Zu'luland, a British protectorate in South Africa north of Natal, and extending to St. Lucia Bay, and inland to the Transvaal. *Area*, 8,900 sq. m. Agriculture and cattle raising are the leading industries; gold is worked; and silver, lead, copper, tin, asbestos, and coal are found. The population comprises 160,000 Zulus and 600 whites, under the government of a resident commissioner at Ekowe. This forms but a small part of the country formerly held by the Zulus, a Kaffir tribe. The remainder has been absorbed in the Transvaal Republic. War broke out between the British and the chief Cetewayo, in 1878, beginning in disaster and ending in victory for the British. Difficulties with the Boers followed, and the remnant of Zululand was declared a British protectorate in 1887.

Zu'ñians, *n. pl.* (*Ethnol.*) A small tribe of American Indians, now numbering about 1,600, occupying a single pueblo situated upon a tableland near the Zuñi river, in northwestern New Mexico. Parts of this village of connected stone tenements are prehistoric, and the Zuñis were noted by the earliest Spanish travellers for their advance toward civilization in architecture, agriculture, the keeping of live-stock, pottery-making, and weaving. They are peaceable, and have long been self-supporting; while their curious customs and beliefs have of late attracted much attention, and been extensively written upon. Their language forms a stock entirely different from that of any other known tribe.

Zyg-, Zygo-. An initial compounding element derived from the Greek *zygon*, yoke.

Ablepsy, ăb'lĕp-se.
Ablignrition, ăb-le-gu-rĭsh'-ŭn.
Abner, ăb'nŭr.
Abnet, ăb'uĕt.
Abnoba, ahb'no-bah.
Abo, ah'bo.
Aboite, ah'bo-īt.
Abolla, ah bŏl'lah.
Aboma, ah-bo'mah.
Abomasum, ăb-o-ma'sŭm.
Abomey, ăh-o-ma'.
Aboo, ah-boo'.
Aboo-arish, ah-boo-ah'reesh.
Aborigines, ăb-o-rĭj'i-nēz.
Abou Hanifah, ah'boo ah'-ne-fah.
Abou Hannes, ah'boo hăn'-nēz.
Abonkir, ah-boo-kēr'.
Abonlfeda, ah-bool'fa-dah.
Aboville, ah-bo-vēl'.
Abra, ah'brah.
Abrabanel, ahv-rah-vah-nāl'.
Abracadabra, ăb-ra-ka-dăh'-rah.
Abraham, a'brah-hăm.
Abrallos, ah-brah'lōz.
Abramis, ăb'rah-mĭs.
Abranchians, a-brăng'ke-ănz.
Abrantes, ah-brahn'tăz.
Abrasion, ăh-ra'zhŭn.
Abrasite, ăb'ra-sīt.
Abranm, a-brŏm'.
Abraxas, ah-brăks'ăs.
Abrenvoir, ah-hroo-vwŏr'.
Abroma, a-hro'mah.
Abronia, a-bro'ne-ah.
Abrotanum, ăh-ro-ta'nŭm.
Abrud-banya, ŏb-rood-bahn'-yah.
Abrus, a'hrŭs.
Abruzzo, ah-hroot'zo.
Absalom, ăb'sah-lŏm.
Abscission, ăb-sĭsh'ŭn.
Abscota, ăh-sko'tah.
Absimarus, ăh-sĭm'a-rŭs.
Absinthe, ăb-sĭnth'.
Absinthine, ăb-sĭnth'ĭn.
Absinthium, ăb-sĭn'the-ŭm.
Absis, ăb'sĭs.
Absorokas, ăh-so-ro'kăs.
Absque hoc, ăbs'kwe hoc.
Absque tali causa, ăbs'kwe ta'lī kaw'zah.
Abstersion, ăh-stŭr'shŭn.
Absurdum, ăb-sŭr'dŭm.
Abu, ah'boo.
Abu-Bekr, ah'boo-ba'kr.
Abul Fazl, ah'hool fahz'l.
Abuna, a-bu'na.
Abuta, ah-bu'tah.
Abutilon, ah-bu'te-lŏn.
Abydenus, ăh-e-de'nŭs.
Abydos, ah-be'dŏs.
Abyo, ah-he'yo.
Abyss, a-bĭs'.
Abyssinia, ăb-ĭs-sĭn'yah.
Acacalis, a-kăk'a-lĭs.
Acacia, a-ka'she-ah.
Acacius, a-ka'shŭs.
Academia, ăk-a-de'me-ah.
Academics, ăk-a-dĕm'ĭks.
Academy, a-kăd'e-me.
Acadia, ah-ka'de-ah.
Acadialite, ah-ka'de-ăl-īt.
Acajou, ăk'ah-joo.
Acaleph, ăk'ah-lĕf.
Acalycine, ah-kăl'e-sĭn.
Acalypha, ah-kăl'e-fah.
Acambou, ăk-ăm-boo'.
Acamptosomes, a-kămp'to-sūmz.
Acanny, ah-kăn'ne.
Acantha, a-kăn'thah.
Acanthaceæ, a-kăn-tha'se-e.
Acanthion, a-kăn'the-ŏn.
Acanthocephalans, a-kăn-tho-sĕf'ah-lănz.
Acanthocinus, a-kăn-thŏs'e-nŭs.
Acanthodactylus, a-kăn-tho-dăk'til-ŭs.
Acanthoderma, a-kăn-tho-dŭr'mah.
Acanthodes, a-kăn'thōdz.
Acantholimon, a-kan-tho'-le-mŏn.
Acanthonin, a-kăn'tho-nĭn.
Acanthophis, a-kăn'tho-fĭs.
Acanthopoda, a-kăn-thŏp'o-dah.
Acanthopterygii, a-kăn-thŏp-tūr-lj'e-e.
Acanthurus, ăk-ăn-thu'rŭs.
Acanthus, a-kăn'thŭs.
Acanus, ah-ka'nŭs.
Acanzii, ah-kăn'se-e.
A Capella, ah kah-pĕl'lah.
Acapulco, ăk-ab-pool'ko.
Acaridæ, a-kăr'e-de.
Acarnania, ăk-ăr-ua'ne-ah.
Acaroid, ăk'ăr-oid.
Acarus, ăk'a-rŭs.
Acasta, ah-kăs'tah.
Acatalepsia, a-kăt-ah-lĕp'-shah.
Acatharsia, ăk-ah-thăr'shah.
Acca Laurentia, ăk'kah lo-rĕn'shah.
Accad, ăk'kahd.
Accelerando, ăk-sĕl-ūr-ăn'do.
Accendones, ăk-sĕn-do'nēz.
Accentorinæ, ăk-sĕn-to-re'ne.
Acciaccatura, ăt-che-ăk-a-too'rah.
Acciaioli, ăt-chah-yo'le.
Accipenser, ak-se-pĕn'sŭr.
Accipitres, ăk-sĭp'e-tūrz.
Accipitrinæ, ăk-se-plt're-ne.
Accipitrine, ăk-se-plt'rĭn.
Accismus, ăk-sĭs'mŭs.
Accius, ăk'she-ŭs.
Accola, ăk'ko-lah.
Accolade, ăk-ko-lahd'
Accolti, ăk-kŏl'te.
Accomac, ăk'ko-măk.
Accompt, ăk-kownt'.
Accordion, ăk-kŏr'de-ŭn.
Accorso, ăk-kŏr'so.
Acconchement, ăk-koosh'-uĕn(g).
Accoucheur, ăk-koo'shoor.
Accouple, ăk-kŭp'l.
Accoutrements, ăk-koo't'r-mĕnts.
Accra, ăk'krah.
Accrescimento, ăk-krĕsh-mĕn'to.
Accrington, ăk'krĭng-tŭn
Accubitus, ăk-ku'be-tŭs.
Acceldama, ah-săl-dah'mah
Accentric, a-sĕn'trĭk.
Accephal, ăs'e-făl.

Acephala, a-sĕf'a-lah.
Acephalophores, a-sĕf-ah-lŏf'o-rēz.
Acer, a'sŭr.
Aceraceæ, a-sŭr-a'se-e.
Aceranus, a'sŭr-ăns.
Acerbi, a-sŭr'be.
Acerenza, ăt-cha-rān'zah.
Accric, a-sĕr'ik.
Acerinæ, a-sĕr'e-ne.
Acerno, ah-chār'no.
Acerra, {ah-sĕr'rahor. ah-chār'rah.
Acestes, uh-sēs'tēz.
Acetabulum, a-sĕt-ăb'u-lŭm.
Acetal, a-se'tăl.
Acetamide, a-se'tah-mīd.
Acetate, ăs'e-tāt.
Acetometer, ăs-e-tŏm'e-tŭr.
Acetone, ăs'e-tōn.
Acetose, ăs'e-tōz.
Acetous, a-se'tŭs.
Acetyle, ăs'e-til.
Ach, ahk.
Achabytos, ăk-ah-be'tŏs.
Achæa, ah-ke'yah.
Achæmenes, ah-ke-me'nēz.
Achæmenium, ah-ke'ne-ŭm.
Achæi, ah-ke'i.
Achæorum Statio, ăk-e-o'-rŭm sta'she-o.
Achaia, ah-ka'yah.
Achamia, ah-ka'ne-ah.
Achard, ah-shahr'.
Acharnæ, ah-kahr'ne.
Achates, ah-ka'tēz.
Achatina, ăk-ah-te'nah.
Ache, āk.
Achcen, ăt-chēn'.
Acheloides, ah-kĕl'oi-dēz.
Achelous, ăk-e-lo'ŭs.
Achenbach, ăh'kān-bahk.
Achenium, a-che'ne-ŭm.
Achenwall, ah'kān-vawl.
Achernar, a-kār'nahr.
Acheron, ăk'e-rŏn.
Acherontia, ăk-e-rŏn'shah.
Acherset, ăk'ŭr-sĕt.
Achersusia, ăk-ŭr-oo'zhah.
Achill, ăk'il.
Achillea, ăk-il-le'ah.
Achilles, a-kil'lēz.
Achimenes, ah-kim'e-nēz.
Achirite, ăk'ir-it.
Achlamydeous, ăk-lah-mid'-e-ŭs.
Achmet, ah'mād.
Achmin, ahk'mēn.
Achmite, ahk'mīt.
Achoury, ăk'ŏn-re.
Achor, a'kŏr.
Achras, a'krahs.
Achray, ăk-rai'.
Achromatic, ăk-ro-măt'ik.
Achromatism, a-krōm'a-tizm.
Achsai, ahk'sa.
Achtyrka, ahk-tŭr'kah.
Achyr, ah-keer'.
Achyranthes, ăk-e-răn'thez.
Aci, ah'che.
Acia, a'she-ah.
Acicula, a-sik'u-lah.
Acid, ăs'id.
Acidimetry, ă-se-dim'e-tre.
Aciduke, a-sid'u-le.
Aciform, a'se-fōrm.
Acilius Glabrio, a-sil'yŭs gla'bre-o.
Acinaceous, a-sin-a'she-ŭs.
Acinaciform, a-sin-ăs'e-fōrm.
Acinose, ăs'e-uōz.
Acinus, ăs'e-nŭs.
Acipenser, ăs-e-pĕn'sŭr.
Acis, ah'sis.
Aciurgy, ăs-e-ŭr'je.
Acken, ah'kān.
Aclides, ăk-li'dēz.
Aclinic, a-klin'ik.
Acme, ăk'me.
Acmite, ăk'mīt.
Acmonides, ăk-mŏn'i-deez.
Acne, ăk'ne.
Acnestis, ăk-nĕs'tis.
Acœmetæ, ăs-e-me'te.
Acolyte, ăk'o-lit.
Acouah, ah-ko'mah.
Aconcagua, ăk-on-kah'gwaw.
Aconitates, a-kŏn-e-ta'tēz.
Aconite, ăk'o-nīt.
Aconitine, a-kŏn'e-tin.
Acontcus, ah-kŏn'te-ŭs.
Acontia, a-kŏn'she-ah.
Acontius, a-kŏn'shŭs.
Acopic, a-kŏp'ik.
Acor, a'kor.
Acorus, ăk'o-rŭs.
Acosmia, a-kŏs'me-ah.
Acosta, ah-kŏs'tah.
Acotyledons, a-kŏt-e-le'dŏnz.
Acouchy, ah-koo'she.
Acoumeter, ah-koo'me-tŭr.
Acoustic, a-kow'stik.
Acqua, ak'kwah.
Acquapendente, ak-kwah-pĕn-dĕn'te.
Acquaria, ak-kwah're-ah.
Acquaviva, ăk-kwah-ve'vah.
Acqui, ak'kwe.
Acquia, ak-kwe'ah.
Acquiescence, ak-we-ĕs'sĕnz.
Acrasy, ăk'ra-se.
Acre, a'kŭr.
Acreage, a'kŭr-āj.
Acrelius, a-kre'le-ŭs.
Acri, ah'kre.
Acridii, ah-krid'e-e.
Acridophagi, ah-kre-dŏf'ah-je.
Acrisia, ăk-rizh'yah.
Acrites, ăk're-tēz.
Acroatic, ăk-ro-ăt'ik.
Acrobat, ăk'ro-băt.
Acrocarpi, ăk-ro-kăr'pe.
Acroceraunium, ăk-ro-se-raw'ne-ŭm.
Acrochordon, ăk-ro-kŏr'dŏn.
Acrochorinthus, ăk-ro-ko-rīn'thŭs.
Acrodus, ăk'ro-dŭs.
Acrogaster, ăk-ro-găs'tŭr.
Acrolein, ăk'ro-līn.
Acrogens, ăk'ro-jĕnz.
Acrolepisidæ, ăk-ro-le-pis'-e-de.
Acroliths, ăk'ro-lithz.
Acromion, ăk-ro'me-ŏn.
Acron, ah'krŏn.
Acronycal, a-krŏn'e-kl.
Acropolis, a-krŏp'o-lis.
Acropolita, ak-ro-pŏl'e-tah.
Acrostichum, a-krŏs'te-kŭm.
Acrotarsium, ăk-ro-tär'shŭm
Acroteri, ah-kro-ta're.
Acroterium, ăk-ro-te're-ŭm.
Acrothymion, ăk-ro-thīm'e-ŭn.
Acrotic, a-krŏt'ik.
Acrotomous, a-krŏt'o-mŭs.
Acta, ăk'tah.
Acta Diurna, ăk'tah de-oor'-nah.
Acta Sanctorum, ăk'tah sängk-to'rŭm.
Actæcie, ăk-te'e-e.
Actæa, ăk-te'ah.
Actæon, ăk-te'ŏn.
Actæus, ăk-te'ŭs.
Actia, ăk'te-ah.
Actinism, ăk'tin-izm.
Actinocamax, ăk-tin-o-ka'-măks.
Actinocrinites, ăk-tin-ŏk'-rin-īt.z.
Actinograph, ăk-tin'o-gräf.
Actinoid, ăk'tin-oid.
Actinolite, ăk-tin'o-lit.
Actinology, ăk-tin-ŏl'o-je.
Actinomeris, ăk-tin-ŏm'e-ris.
Actinometer, ăk-tin-ŏm'e-tŭr
Actinostome, ăk-tin'ŏs-tōm.
Actinote, ăk'tin-ōt.
Actis, ăk'tis.
Actium, ăk'shŭm.
Actius Navius, ăk'shŭs na've-ŭs.
Acton, ăk'tŭn.
Actopan, ăk'to-pahn.
Actorides, ăk-tŏr'e-dēz.
Actynolite, ăk-tin'o-lit.
Acuition, ăk-u-ish'ŭn.
Aculeus, a-ku'le-ŭs.
Acumina, a-ku'me-nah.
Acuna, ah-koo'nah.
Acusilans, ah-ku-sil'a-ŭs.
Acworth, ăk'wŭrth.
Ada, a'dah.
Adabaga, ah-dah-bah'gah.
Adafoodia, ah-dah-foo'de-ah.
Adaglo, a-da'jo.
Adair, a-dār'.
Adal, ah-dahl'.
Adam, ăd'ăm.
Adamantæa, ăd-ah-măn-te'ah.
Adamur, ah-dah'moor.
Adana, ah-dah'nah.
Adanson, ah-dăn-sŏn(g').
Adapis, ah-da'pis.
Adar, a'dahr.
Ad arbitrium, ădăr-bĭt're-ŭm
Adarme, ah-dār'me.
Adarsa, ah-dahr'sah.
Adatis, ăd'a-tis.
Adda, ăd'dah.
Addax, ăd'dăks.
Addendum, ăd-dĕn'dŭm.
Addieti, ăd-dik'ti.
Addington, ăd'ding-tŭn.
Addison, ăd'de-sŭn.
Adductor, ăd-dŭk'tŏr.
Adel, ah-dāl'.
Adelaide, ăd'e-laid.
Adelantado, ah-da-lăn-tah'do.
Adeling, ăd'ĕl-ing.
Adelites, ah'dāl-īt.z.
Adelman, ăd'al-now.
Adelopod, a-dĕl'o-pŏd.
Adelphi, a-dĕl'fe.
Adelpholite, a-dĕl'fo-līt.
Adelphous, a-dĕl'fŭs.
Adelsberg, ăd'ălz-bărg.
Adelung, ah'da-loong.
Ademar, ăd-e-mahr'.
Aden, a'dĕn.
Adenalgia, a-dĕn-ăl'je-ah.
Adenara, ah-dan-ah'rah.
Adenburg, ah'dān-boorg.
Adenkalessi, a'dĕn-kah-lĕs'se
Adenoid, ăd'e-noid.
Adenose, ăd'e-nōz.
Adenostylea, a-de-no-stīl'e-e.
Adenotomy, a-dĕn-ŏt'o-me.
Adeodatus, ăd-e-o-dah'tus.
Adeps, a'dĕps.
Aderbeitzan, ah-dār-bīt'zahn.
Adersbach, ah'dārz-bāk.
Ades, a'deez.
Adessenarians, a-dĕs-sin-a'-re-ănz.
Ad eundem, ad e-ŭn'dĕm.
Ad finem, ăd fi'nĕm.
Adhat-Eddoulat, ăd-aht-ĕd-doo'laht.
Adhelme, ăd'hĕlm.
Adhemar, ah-da-mahr'.
Adhesion, ăd-he'zhŭn.
Ad hominem, ăd hŏm'ĭn-ŭm.
Adiantum, a-de-ăn't ŭm.
Adiaphorites, a-de-a-fŏr'e-tēz
Adiaphorons, a-de-ăf'o-rŭs.
Adiapneastia, ăd-e-ăp-noos'-te-ah.
Adiarrhœa, ah-di-ăr-re'ah.
Adiathermic, ăd-i-a-thŭr'mĭk
Adieu, a-hdyoo'.
Adige, ah-de'ja.
Adimantus, ăd-e-măn'tŭs.
Adinfinitum, ăd ĭn-fĭn'e-tŭm
Adinole, ăd'ĭn-ōl.
Ad inquirendum, ăd ĭn-kwe-rĕn'dŭm.
Ad interim, ăd ĭn-te-rĭm.
Adipic, a-dip'ik.
Adipocerate, ăd-e-pŏs'e-rāt.
Adipocere, ăd'e-po-sēr.
Adipsy, ăd'ip-se.
Adirondack, ăd-e-rŏn'dăk.
Adive, ăd'e-ve.
Adjunta, ăd-jŭn'tah.
Adjutage, ăd'joo-tāj.
Adjutant, ăd'joo-tănt.
Adjygurh, ăd'je-goor.
Adiatus, ăd-la'tŭs.
Adler, ăd'lăr.
Ad libitum, ăd lĭb'e-tŭm.
Admah, ăd'mah.
Admargin ate, ăd-măr'jĭn-āt.
Admetus, ăd-me'tŭs.
Adminicle, ăd-mĭn'e-kl.
Admittatur, ăd-mĭt'ta-tŭr.
Admonitio Fustium, ăd-mo-nish'yo fŭs'te-ŭm.
Admonitioner, ăd-mo-ne'-shŏn-ŭr.
Adnascent, ăd-năs'sĕnt.
Adnata tunica, ad'na-tah tu'-ne-kah.
Adnatus, ăd'na-tŭs.
Adobe, ah-do'ba.
Adolphus, a-dŏl'fŭs.
Adoni, ah-do'ne.
Adoni Bezek, ah-do-ne ba'zăk.
Adonijah, ăd-o-ni'jah.
Adonis, a-do'nis.
Ador, a'dōr.
Adorea, ăd-o-re'ah.
Adorno, ah-dor'no.
Adour, ah'door.
Adowa, ăd'o-wah.
Ad pondus omnium, ăd pŏn'dŭs ŏm'ne-ŭm.
Ad quod dammum, ad kwŏd dăm'uŭm.
Adra, ahd'rah.
Adraupatam, ăd-ram-pah-tăm'.
Adramyti, ăd-răm'e-te.
Adrara, ah-drah'rah.
Adrasta, ah-dras'tah.
Adrastia, ah-drăs'te-ah.
Adrets, ah-dra'.
Adria, ah'dre-ah.
Adrian, a'dre-ăn.
Adriano, ah-dre-ah'no.
Adrianople, ah-dre-ăn-o'pl.
Adriatic, a-dre-at'ik.
Adroit, a-droit'.
Adscriptus Glebæ, ăd-skrīp'tŭs gle'be.
Adsidella, ăd-se-dĕl'lah.
Adularia, ăd-u-la're-ah.
Adule, ăd'yul.
Adullam, ah-dŭl'lăm.
Adulterine, a-dŭl'tŭr-īn.
Admupoor, ăd-ŭm-poor'.
Aduncity, a-dŭn'se-te.
Adustion, a-dŭst'yŭn.
Ad valorem, ăd va-lo'rĕm.
Adversa, ăd-vŭr'sah.
Adversaria, ăd-vŭr-sa're-ah.
Advocatus diaboli, ăd-vo-ka'tŭs di-ăb'o-le.
Ady, ah'de.
Adynamia, ăd-e-na'me-ah.
Adytum, ăd'e-tŭm.
Adze, ădz.
Æa, e'ah.
Æacus, e'ah-kŭs.
Ædidium, e-sid'yŭm.
Ædessa, e-dĕs'sah.
Ædile, e'dīl.
Æta, a-e'tah.
Ægades, e-gah'dēz.
Ægæ, e'je.
Ægæon, e-je'ŏn.
Ægagre, e'gah-gra.
Ægaleos, e-ga'le-ŏs.
Ægean, e-je'ăn.
Ægæus, e-je'ŭs.
Ægeus, e'jŭs.
Ægiale, e-ji'a-le.
Ægidius de columna, e-jĭd'e-ŭs de ko-lŭm'nah.
Ægilia, e-jĭl'e-ah.
Ægilops, e-jĭl'ŏps.
Æginæ, e-ji'nah.
Ægineta, e-jin-e'tah.
Eginhard, ĕg'ĭn-härd.
Ægiocus, e-gi'o-kŭs.
Ægis, e'jĭs.
Ægistus, e-jĭs'tŭs.
Ægirin, e'jŭr-ĭn.
Ægle, e'gle.
Egletes, e'gle-tēz.
Ægoceros, e-go'se-rŏs.
Ægophony, e-gŏf'o-ne.
Ægospotamos, e-gŏs-pŏt'a-mŏs.
Egyptiacum, e-jĭp-tī'a-kŭm.
Ægyptus, e-jip'tŭs.
Æl, ăl.
Elfric, ăl'frĭk.
Ælia, e'le-ah.
Ælianus, e-le-a'nŭs.
Ælius, e'le-ŭs.
Aello, a'ĕl-lo.
Ælst, ahlst.
Aelterve, ahl-tär'.
Æmilia, e-mēl'yah.
Æmiliaums, e-mĭl-e-a'nŭs.
Æmilius, e-mĭl'e-ŭs.
Æneas, e-ne'ăs.
Æneid, e-ne'id.
Aeng, ah'ăng.
Æolian, e-o'le-ăn.
Æolipile, e-ŏl'e-pīl.
Æolus, e'o-lŭs.
Æon, e'ŏn.
Æotana, e-o-tah'nah.
Æpinus, e-pi'nŭs.
Aer, a'ĕr.
Æra, e'rah.
Ærarium, e-ra're-ŭm.
Aerides, a'ŭr-ĭdz.
Aerie, a're.
Aerius, a-e're-ŭs.
Ærneu, ĕr'nāu.
Aerodynamics, a-ĕr-o-de-nam'ĭks.
Aeroe, ah'ro.
Aeroeskiobing, ah-ro-ski-o'-bäng.
Aerolite, a'ĕr-o-līt.
Aerolithology, a-ĕr-o-le-thŏl'o-je.
Aerometry, a-ĕr-ŏm'e-tre.
Aeronaut, a'ĕr-o-nawt.
Aeropathobia, a-ĕr-o-fo'be-ah.
Aerophyte, a'ĕr-o-fīt.
Aeroscopy, a-ĕr-ŏs'ko-pe.
Aerosite, a'ĕr-o-sīt.
Aerostat, a'ĕr-o-stāt.
Aerostation, a-ĕr-ŏs-ta'shŭn.
Aerschot, ahr'skŏt.
Aersens, ahr'sānz.
Æruginous, e-roo'je-nŭs.
Ærugo, e-roo'go.
Ærulus, e-roo'lŭs.
Aeruscatores, e-rŭs-kah'to-rēz.
Æschynite, ĕs'ke-mīt.
Æschines, ĕs'ke-nēz.
Æschrion, ĕs'kre-ŏn.
Æschylus, ĕs'ke-lŭs.
Æsculapius, ĕs-ku-la'pe-ŭs.
Æsculus, ĕs'ku-lŭs.
Æsop, e'sŏp.
Æsopus, e-so'pŭs.
Æsthetics, ĕs-thĕt'ĭks
Æstival, ĕs-tī'val.
Aetheogamous, a-e-the-ŏg'a-mŭs.
Æther, e'thŭr.
Æthiops, e'the-ŏpz.
Æthokirrin, e-thŏk'ĭr-rĭn.
Æthrioscope, e'thri-o-skōp.
Æthusa, e-thu'zah.
Ætiology, e-ti-ŏl'o-je.
Aetion, a-e'te-ŏn.
Aetites, a-e-ti'tēz.
Aetius, a-e'shŭs.
Ætobates, e-to-ba'tēz.
Ætolia, e-to'le-ah.
Afer, a'fŭr.
Affa, ăf'fah.
Affettuoso, ăf-fät-u-o'zo.
Affiche, ăf-fe'sha.
Affiatus, ăf-fia'tŭs.
Affogados, ăf-fo-gah'dōz.
Affre, ahfr.
Affreight, ăf-frāt'.
Affright, ăf-frīt'.
Affrontee, ăf-frŭnt-ee'.
Afghan, ăf'gahn.
Afghanistan, af-gahn'ēs-tahn.
Afiom, ah-fe-oom'.
A fortiori, a fôr-she-o're.
Afra, ah'frah.
Afragola, ah-frah-go'lah.
Afrancesados, ah-frän-sa-sah'dōz.
Afrania, ah-frah'ne-ah.
Afranius, a-fra'ne-ŭs.
Afreedis, ah-fre'dis.
Africa, ăf're-kah.
Afrikeah, ăf-re-ke'ah.
Afshars, ăf'shahrz.
Aftou, ăf'tŭn.
Afzul-Ghur, ăf-zool-goor'.
Aga, a'gah.
Agably, ăg'ah-ble.
Agades, ăg'ah-dēz.
Agadir, ăg'ah-deer.
Agag, a'găg.
Agahuatolite, ăg-ăl-măt'o-līt.
Agallega, ah-gal-la'gah.
Agallochum, a-gal-lo'chŭm.
Agalma, a-gal'mah.
Agama, a-ga'mah.
Agamæ, ag'a-me.
Agamedes, ăg-ah-me'dēz.
Agamemnon, ăg-ah-mĕm'nŏn
Agamenticus, ăg-a-mĕn'te-kŭs.
Agami, ăg'ah-me.
Agana, ah-gah'nah.
Aganippe, ăg-a-nip'pe.
Agapæ, ag'a-pe.
Agaparmonians, ăg-a-pe-mo'ne-ănz.
Agapanthus, ăg-a-păn'thŭs.
Agapetæ, a-ga'p'e-te.
Agaphite, ag'a-fīt.
Agapetus, ăg-a-pe'tŭs.
Agar, a'gar.
Agaricus, a-gar'e-kŭs.
Agaslas, a-ga'she-ăs.
Agasicles, a-gās'e-klēz.
Agassiz, ah-gäs'siz.
Agata, ăg'ah-ta.
Agate, ăg'at.
Agatha, ag'ah-thah.
Agatharchides, ăg-a-thär'-ke-dēez.
Agatharchus, ăg-a-thar'kŭs.
Agathis, ag'a-this.
Agathocles, a-gath'o-klēz.
Agathon, ah'gah-tŏn.
Agathophyllum, ăg-a-thŏf'-fe-lŭm.
Agathyrsus, ăg-a-thŭr'sŭs.
Agatize, ăg'a-tīz.
Agatton, ah-gat'tŏn.
Agave, a-ga've.
Agaveæ, a-ga've-e.
Agde, ahgd.
Agdeh, ahg'da.
Ageda, ah-ja'dah.
Agelaius, ah-je-li'ne.
Agelastus, a-je-lăs'tŭs.
Ageluoth, ăj'ĕl-nŏth.
Agen, ah-zhan(g').
Agenda, a-jĕn'dah.
Agenois, ah-zhan-waw'.
Agenor, a-ge'nŏr.
Agenoria, a-ge-no're-ah.
Ager, ah-zha'.
Agesander, ăj-e-săn'dŭr.
Agesilaus, a-jes-e-la'ŭs.
Agesipolis, ăj-e-sip'o-lis.
Agga, ăg'gah.
Agger, ăg'gär.
Aggershuys, ăg'gărs-hoos.
Aggeroe, ăg-gär-oo'a.
Aggersund, ăg gär-soond.
Aggerzeen, ăg gär-zān.
Aghaboe ăg'ah-bo.
Aghadoe, ăg'ah-do.
Aghrim, awh-rim'.
Agile, aj'il.
Agillochum, a-jil'lo-chŭm.
Agilulf, ăj'e-lŭlf.
Agincourt, ah-zhahn-koor'.
Agio, ah'je-o.
Agiotage, ah'je-o-tăj.

Agis, a'jĭs.
Agitato, ah-zhe-tah'to.
Aglaia, ăg-la'ya.
Aglaope, ăg-la'o-pe.
Aglasonn, ăg'lah-soon.
Aglet, ăg'lĕt.
Aglie, ah'gle.
Agnet, ăg'nĕt.
Agnadello, ahn-yah-dĕl'lo.
Agnall, ăg'năl.
Agnano, ahn-yah'no.
Agnes, ăg'nĕz.
Agnew, ăg'uū.
Agno, ăg'no.
Agnolo, ahn-yo'lo.
Agnomen, ăg-no'mĕn.
Agnoni, ahn-yo'ne.
Agnotherium, ăg-no-the're-ūm.
Agnus castus, ăg-nŭs kăs'tŭs.
Agnus Dei, ăg'nus de'i.
Agobard, ăg-o-bărd'.
Agogebic, a-gŏg'e-bĭk.
Agon, ah'gŏn.
Agones Capitolini, a-go'nēz ka-pĭt-o-li'ni.
Agonistes, ăg-o-nĭs'tēz.
Agonius, a-go'ne-ŭs.
Agonothetes, ăg-o-no-the'tēz.
Agonus, ah-go'nŭs.
Agoona, ah-goo'uah.
Agoracritus, ag-o-răk're-tŭs.
Agoræa, ăg-o-re'ah.
Agorens, ăg-o-re'ŭs.
Agosta, ah-gŏs'tah.
Agot, ah-go'.
Agonara, ah-goo-ah'rah.
Agouti, a-goo'te.
Agows, ahg'ooz.
Agra, a'grah.
Agreda, ah-gra'dah.
Agrestic, a-grĕs'tĭk.
Agricola, a-grik'o-lah.
Agricultnre, ăg-re-kŭl'tyŭr.
Agrigentum, ăg-re-jĕn'tŭm.
Agrimony, ăg're-mo-ne.
Agriopes, a'gre-o-pēz.
Agrippa, a-grĭp'pah.
Agrippina, ăg-grĭp-pī'nah.
Agronomy, a-grŏn'o-me.
Agrostere, a-grŏs'te-e.
Agrostemma, ăg-ro-stem'mah
Agrostis, a-grŏs'tĭs.
Agrostography, ăg-rŏs-tŏg'ra-fe.
Agua, ah'gwah.
Aguadilla, ah-gwah-dĕl'yah.
Aguas calientes, -kal-e-ān'-tāz.
Agua Fria, -fre'ah.
Ague, a'gū.
Agueda, ah-gwa'dah.
Agnesseau, ah-gās-so'.
Aguila, ah-ghe'lah.
Aguilar de la Frontera, ah-ghe-lar' da lah frŏn-ta'rah.
Agujari, ah-goo-yah're.
Agul, ah'gool.
Agulhas, ah-gool'yahz.
Agyleus, a-ge-le'ŭs.
Agylla, a-jĭl'lah.
Agynnians, a-jĭn'ne-ănş.
Agyrium, ah-je're-ŭm.
Ahab, a'hăb.
Ahanta, ah-ăn'tah.
Ahar, a'hahr.
Ahascragh, ah-ăs'krah.
Ahasuerus, a-hăs-u-e'rŭs.
Ahaus, ah-hows'.
Ahava, ah-hah'vah.
Ahaz, a'hăz.
Ahaziah, a-ha-zi'ah.
Ahiah, a-hi'ah.
Ahiezer, a-hi'e-zŭr.
Ahijah, a-hi'jah.
Ahimaaz, a-hĭm'a-ăz.
Ahimelech, a-hĭm'e-lĕk.
Ahinoam, a-hĭn'o-ăm.
Ahiolo, ah-yo'lo.
Ahira, a-hi'rah.
Ahithophel, a-hĭth'o-fĕl.
Ahlen, ah'lān.
Ahlwardt, ahl'oohărt.
Ahmedabad, ah-mĕd-a-băd'.
Ahmed Khan, ah'mĕd kahn.
Ahmednuggur, ah-mĕd-uŭg'gŭr.
Ahmedpoor, ah-mĕd-poor'.
Ahmed Shah el Abdaly, shah ĕl ăb'dah-le.
Ahmood, ah'mood.
Ahoghill, ah-ho'gĭl.
Aholibamah, a-hŏl-e-ba'mah.
Ahonai, ah-oo'ī.
Ahrberg, ahr'bărg.
Ahrian, ah're-an.
Ahriman, ah're-măn.
Ahrweiler, ahr-wī'lăr.
Ahnitzol, ah-weet'zohl.
Ahnn, ah'oon.
Ahus, ah-oos'.
Ai, ah'e.
Aias, ī'yahs.
Aichmalotarch, āk-măl'o-tahrk.
Aide-de-camp, ād-de-kŏn(g)'.
Aids, a'ĕdz.
Aigle, ī'gl.
Aignan, īn'yăn.
Aigrette, a-grĕt'.
Aigue-marine, āg-mah-rēn'.
Aigues-Mortes, āg-mōrt'.
Aiguille, a-geel'.
Aiguillettes, a-geel-lĕts'.
Aignillon, a-ge'yōu(g).
Aiguisée, a-gwe'sa.
Aiken, ā'kĕn.
Aikin, ā'kĭn.
Allantus, a-lăn'tŭs.
Ailettes, āl-lĕts'.
Aimoin, a-moin'.
Ain, ahn(g)'.
Ain-tab, ah-ēn-tahh'.
Ainsworth, ānz'wŭrth.
Aion, a'yŏn.
Airdrie, ār'dre.
Aire, ār.
Aisle, īl.
Aisne, īn.
Aisse, a-sa'.
Ait, āt.
Aitchbone, āch-hōn'.
Aitkin, āt'kĭn.
Aix, āks.
—la Chapelle, -lah shah-pĕl'.
—les Bains, -lāz bain.
Aizoon, i-zoou'.
Ajaccio, ah-yät'cho.
Ajalon, ah'zha-lŏn.
Ajan, ah-zhahn'.
Ajax, a'jăks.
Ajeho, i-ye-ho'.
Ajmere, ahj'mēr.
Ajuga, a-joo'gah.
Ajugeæ, a-joo'ge-e.
Ajuruoca, ah-zoo-roo-o'kah.
Ajutage, ăj'ū-tāj.
Akabah, ăk'ah-bah.
Akanticon, a-kăn'te-kŏn.
Akbar, ăk'bahr.
Akee, ah-kē'.
Akenside, a'kĕn-sīd.
Akerman, ah'kār-mahn.
Akhissar, ăk-hĭs'sahr.
Akhlat, ahk-läht'.
Aki, a'ke.
Akimbo, a-kĭm'bo.
Akiska, ah-kēs'kah.
Akka, ăk'kah.
Akootan, ah-koo'tahn.
Akrabbim, ăk-răb'bĭm.
Akreyri, ahk-ra're.
Akron, ăk'rŏn.
Akserai, ăk'sĕr-a-e.
Akshehr, ahk-shār'.
Aksoo, ăk'soo.
Aksu, ăk'soo.
Aktagh, ăk'tah.
Akteboli, ăk-tĕb'o-le.
Akwambu, ăk-wăm'boo.
Akzib, ăk'zeeh.
Akyab, ăk'e-ăh.
Al, ăl.
Ala, a'lah.
Alaba, ah-lah'bah.
Alabama, ăl-ah-bah'mah.
Alabastrum, al-a-bas'trŭm.
Alabat, ăl'a-bät.
Alabes, ăl'a-bēz.
Alachua, ăl'ah-kwaw.
Alacoque, ah'lah-kŏk.
Alacrane, ăl-ah-krăn'.
Alacta, a-lak'tah.
Aladagh, ăl-ah-dah'.
Aladan, ah-lah'dăn.
Alæa, a-le'ah.
Alæi, a-le'e.
A la Française, ah lah frŏu(g)-sa'.
Alaghey, ăl'ah-ga.
Alagon, ăl-ah-go'ah.
Alagou, ăl'ah-gou.
A la Grecque, ah lah grāk'.
Alain, ah-lăn'.
— Chartier, -shahr-te-a'.
— de l'Isle, -da lēl'.
Alais, ah-la'.
Alajuela, ah-la-oo-a'lah.
Alakananda, ăl-a-kah-năn'-dah.
Alala, a-la'la.
Alalia, a-la'le-ah.
Alalite, ăl'a-līt.
Alamance, ăl'a-mănş.
Alamania, ăl-a-ma'ue-ah.
Alamanes, ăl-a-ua'nĕz.
Alamas, ăl'ah-mahs.
Alameda, ah-lah-ma'dah.
Alamire, ah-lah-me'ra.
Alamo, ăl'ah-mo.
Alamode, ăl-a-mōd'.
Alamort, ah-la-mōrt'.
Alamos, ăl'a-mōz.
Alan, ăl'ăn.
A l'Anglaise, ah lăng-gla'.
Alangiaceæ, a-lăn-je-a'se-e.
Alanglum, a-lăn'je-ŭm.
Alani, a-la'ni.
Alania, a-la'ne-ah.
Alanine, ăl'a-nīn.
Alanthus, a-lăn'thŭs.
Alantine, a-lăn'tĭn.
A la Polacca, ah la po-lăk'kah.
Alaqua, ăl'a-kwaw
Alar, a'lăr.
Alara, ah-lah'rah.
Alaraf, ah-lah'răf.
Alarcon, ah-lăr-kōn'.
Alares, a-la'rēz.
Alaric, ăl'a-rĭk.
Alary, ăl'a-re.
Alas, a-läs'.
Alashari, ăl-ăsh'a-re.
Ala-Shehr, al-ah-shār'.
Alaska, a-läs'kah.
Alasmadon, a-läs'ma-dŏn.
Alassio, ah-läs'se-o.
Alatæ, a-la'te.
Ala-Tagh, ah-lah-tah'.
Alatamaha, ah-lät-a-mah-ah'.
Alate, a'lāt.
A latere, a lăt'ŭr-e.
Alaternus, ăl-a-tŭr'nŭs.
Alatri, ah-lah'tre.
Alatyr, ăl'a-teer.
Alanda, a-law'dah.
Alava, ah-lah'vah.
Alba, ăl'bah.
Alba-longa, ăl'bah-lŏng'gah.
Albacete, ăl-bah-tha'ta.
Albade Tormes, -da tōr'māz.
Alban, anl'băn.
Albanese, ăl-bah-nāz'.
Albani, ăl-bah'ne.
Albania, ăl-ba'ne-ah.
Albano, ăl-hah'no.
Albany, ăl'ba-ne.
Albarium, ăl-ba're-ŭm.
Albata, ăl-ba'tah.
Albategni, ăl-bah-ta'ne.
Albeit, awl-bē'it.
Albemarle, ăl-he-mărl'.
Albenga, ăl-băn'gah.
Albergati Capacelli, ăl-hār-gah'te kah-pah-chel'le.
Alberic, ăl'ba-rĭk.
Alberoni, ăl-ba-ro'ne.
Albert, ăl'bŭrt.
Alberti, ăl-bār'te.
Albertinelli, ăl-bār-tēu-ĕl'le.
Albertite, ăl'bŭrt-īt.
Albertus, ăl-hŭr'tŭs.
Albi, ăl-be'.
Albia, ăl'he-ah.
Albicore, ăl'be-kōr.
Albigenses, ăl-be-jĕn'sēz.
Albinism, ăl'be-nĭzm.
Albinos, ăl-hi'nōs.
Albinus, ăl-bī'uŭs.
Albion, ăl'he-ŏn.
Albiones, ăl'be-o-nēz.
Albite, ăl'bīt.
Albon, ahl-bŏn(g)'.
Alborn, ăl'bo-rah.
Alborak, ăl-bōr'ăk.
Alboran, ăl-bo'răn.
Albret, ăl-bra'.
Albucasa, ăl-boo-kah'sah.
Albucilla, ăl-bu-sĭl'lah.
Albuera, ăl-boo-a'rah.
Albufeira, ăl-boo-fa'e-rah.
Albufera, ăl-boo-fa'rah.
Albuginea, ăl-bu-jiu'e-ah.
Albugo, ăl-bu'go.
Albula, ăl-boo'lah.
Albumen, ăl-bu'mĕn.
Albuminoid, ăl-bu'mĭn-oid.
Albuquerque, ăl-boo-kār'ka.
Alburg, al'boorg.
Alburnum, ăl-bŭr'uŭm.
Albus Pagus, ăl'bŭs pa'gŭs.
Alby, ăl-be'.
Alcæus, ăl-se'ŭs.
Alcahest, ăl'kah-ĕst.
Alcaic, ăl-ka'ĭk.
Alcaid, ăl-kād'.
Alcala, ăl-kah'lah.
Alcalatraz, ăl-kah'la-trahz.
Alcalde, ăl-kăl'de.
Alcamenes, ăl-kăm'e-nēz.
Alcamo, ăl-kah'mo.
Alcaniz, ăl-kau-yēth'.
Alcantara, ăl-kăn-tăh'rah.
Alcantarilla, ăl-kăn-tah-rēl'-yah.
Alcaraz, ăl-kah-răth'.
Alcarraza, ăl-kah-rah'thah.
Alcazar, ăl-kah'thăr.
Alcedinidæ, ăl-se-dĭn'e-de.
Alcedo, al-se'do.
Alcestes, ăl-sēs'tēz.
Alcester, aulş'tŭr.
Alchemy, ăl'ke-me.
Alcibiades, ăl-se-hi'ah-dēz.
Alcides, ăl-si'dēz.
Alcidæ, ăl'se-de.
Alcimus, ăl'se-mŭs.
Alcinæ, ăl'se-ue.
Alcinous, ăl-sĭn'o-ŭs.
Alciope, ăl-si'o-pe.
Alciphron, ăl'se-frŭn.
Alcira, ăl-the'rah.
Alckmaar, ahlk-mahr'.
Alcmæon, ălk-me'ŏn.
Alcman, ălk'măn.
Alcmena, ălk-me'nah.
Alco, ăl'ko.
Alcona, ăl-ko'nah.
Alcoometer, ăl-ko-ŏm'e-tŭr.
Alcora, ăl-ko'rah.
Alcoran, ăl'ko-răn.
Alcove, ăl'kōv.
Alcoy, ăl-koi'.
Alcuin, ăl'kwĭn.
Alcyonacea, ăl-se-o-na'se-ah.
Alcyone, ăl-si'o-ue.
Alcyonia Palus, ăl-se-o'ne-ah pa'lŭs.
Alcyonidæ, ăl-se-ŏn'e-de.
Alcyonite, ăl'se-ŏn-īt.
Alcyonium, ăl-se-o'ne-ŭm.
Aldabra, ăl-da'brah.
Aldan, ahl'dahn.
Aldborough, ăld'bro.
Aldebaran, ăl-dĕb'a-răn.
Aldegrever, ăl-da-gra'vŭr.
Aldehyds, ăl'de-hīdz.
Aldelyd, ăl'de-līd.
Alden, anl'dĕn.
Alderley, aul'dŭr-le.
Alderney, aul'dŭr-ne.
Aldershot, aul'dŭr-shŏt.,
Aldie, aul'de.
Aldine, ăl'dīn.
Aldobrandini, ăl-do-hrăn-de'ue.
Aldovandus, ăl-do-văn'dŭs.
Aldstone, ăldz'tūn.
Aldus, ăl'dŭs.
Alea, a-le'ah.
Alectoromachy, a-lĕk-trŏm'-a-ke.
Alectrurinæ, a-lĕk-troo're-ne.
Alectryomancy, a-lĕk-tre-o-măn'se.
Alectura, ăl-ĕk-tū'rah.
Aleman, ah-la-mahn'.
Alemanni, ăl-e-măn'ne.
Alembert, -lŏn-bār'.
Alembic, a-lĕm'bĭk.
Alemtejo, ah-lahn(g)ta'zho.
Alençon, ah-lon(g)-son(g)'.
Aleuío, ah-la're-o.
Aleppo, ah-lĕp'po.
Alessandria, ăl-ĕs-săn'dre-ah.
Alessi, ah-läs'se.
Alessio, ah-lĕs'se-o.
Aletris, a-le'trĭs.
Aleurites, ăl'yoo-rītz.
Aleurometer, ăl-yoo-rŏm'e-tŭr.
Alentian, ah-loo'she-ahn.
Alexander, ăl-ĕks-ăn'dŭr.
Alexandretta, ăl-ĕks-ăn-drĕt'tah.
Alexandria, ăl-ĕks-ăn'dre-ah.
Alexandrine, ăl-ĕks-ăn'drĭn.
Alexandroosk, ah-lĕks-ăn-droosk'.
Alexipharmic, a-lĕks-e-făr'-mĭk.
Alexis, ăl-ĕks'ĭs.
Aleybey, ah-la'ba.
Alfar-Dagh, ăl-fahr-dahg'.
Alfaro, ăl-fa'ro.
Alfeld, al'fĕlt.
Alfenus, ăl-fe'nŭs.
Alfieri, ăl-fe-a're.
Alfonso, ăl-fŏn'so.
Alford, al'fŭrd.
Alfort, ăl-fōr'.
Alfred, al'frĕd.
Algæ, al'ge.
Algardi, ăl-gahr'de.
Algarinejo, ăl-gah-re-na'ho.
Algaroba, ăl-gah-ro'bah.
Algaroth, al'ga-rŏth.
Algarotti, ăl-gah-rōt'te.
Algarve, ăl-gahr'va.
Algebra, al'je-brah.
Algeçiras, ăl-ha-the'rahs.
Algemesi, ăl-ha-ma-se'.
Algenib, al'je-nĭb.
Algeria, ăl-je're-ah.
Algheri, ăl-ga're.
Algidum, al'je-dŭm.
Algiers, al-jērz'.
Algoa, al-go'ah.
Algol, al'gŏl.
Algoma, ăl-go'mah.
Algonquin, ăl-gŏn'kwĭn.
Algorab, al'go-răb.
Algorithm, al'go-rĭthm.
Algous, al'gŭs.
Alguazil, ăl-gah-zēl'.
Alhama, al-ah'mah.
Alhambra, ăl-ăm'brah.
Alhaurin, ăl-o'reen.
Alhucemas, ăl-oo-tha'mas.
Ali, ah'le.
Alicante, ăl-e-kănt'.
Alicata, ah-le-kah'tah.
Alice, al'ĭs.
Alicudi, ăl-e-kn'de.
Alidade, al'e-dād.
Alienation, āl-yĕn-a'shŭn.
Aliglmr, al-e-ghoor'.
Alignement, a-līn'mĕnt.
Alimeda, ah-le-ma'dah.
Alioth, a'le-ŏth.
Ali Pacha, ah'le paw'shaw.
Alipee, al-e-pē'.
Alipheria, al-e-fe're-ah.
Aliquant, ăl'i-kwănt.
Aliquot, ăl'i-kwŏt.
Alismaceæ, ăl-ĭs-ma'se-e.
Alison, ăl'e-sŭn.
Alitrunck, ăl'i-trŭngk.
Aliwal, ăl'e-wahl.
Alizarin, a-lĭz'a-rĭn.
Aljubarrota, ăl-zhoo-băr-ro'-tah.
Alkahest, ăl'ka-hĕst.
Al-kaisseria, -kāz-za're-ah.
Alkalescency, ăl-ka-lĕs'-sĕn-se.
Alkali, ăl'ka-le.
Alkanet, ăl'ka-nĕt.
Alkmer, ălk-mahr'.
Alkool, ăl-koo'ool.
Allah, ăl'lah.
Allahabad, ăl-lah-ah-hăd'.
Allamanda, ăl-läh-măn'dah.
Allantoin, ăl'lan-toin.
Allanturic, ăl-lăn-tu'rĭk.
Allass, ăl-läs'.
Allatoona, ăl-lah-too'nah.

Anthropolite, ăn-thrŏp'o-līt.
Anthropometry, ăn-thro-pŏm'e-tre.
Anthropomorphite, -po-mŏr'fīt.
Anthropophagy, ăn-thro-pŏf'a-je.
Anthus, ăn'thŭs.
Anti, ăn'ti.
Antiarine, ăn-ti'a-rĭn.
Antias, ăn'te-as.
Antibacchius, ăn-te-băk-ki'-ŭs.
Antibes, ŏn-teeb'.
Antibrachial, ăn-te-brāk'e-ăl
Antichronism, ăn-tĭk'ro-nĭzm.
Antichthon, ăn-tĭk'thŏn.
Anticor, ăn'te-kŏr.
Anticosti, ăn-te-kŏs'te.
Anticous, ăn'te-kŭs.
Antietam, ăn-ti-e-tăm'.
Antigone, ăn-tĭg'o-ne.
Antigonus, ăn-tĭg'o-nŭs.
Antigraph, ăn'te-grăf.
Antigua, ăn-te'gwah.
Antihelix, ăn-te-he'lĭks.
Antilles, ăn-tĕlz'.
Antimetabole, ăn-te-mĕt'a-hŏl.
Antimony, ăn'te-mo-ne.
Antinomianism, ăn-te-no'-me-ăn-ĭzm.
Antinous, ăn-tĭn'o-ŭs.
Antioch, ăn'te-ŏk.
Antiochus, ăn-ti'o-kŭs.
Antiope, ăn-ti'o-pe.
Antioquia, ăn-te-o'kwe-ah.
Antipædobaptist, ăn-tĭp-e-do-băp'tĭst.
Antiparos, ăn-tĭp'a-rŏs.
Antipater, ăn-tĭp'ah-tĕr.
Antipathy, ăn-tĭp'a-the.
Antiperistasis, ăn-te-pe-rĭs'-ta-sĭs.
Antiphlogistic, ăn-te-flo-jĭs'-tĭk.
Antiphony, ăn-tĭf'o-ne.
Antiphrasis, ăn-tĭf'ra-sĭs.
Antipodes, ăn-tĭp'o-dēz.
Antiptosis, ăn-tip-to'sĭs.
Antipyretic, ăn-te-pe-rĕt'ĭk.
Antique, ăn-teek'.
Antiquity, ăn-tĭk'we-te.
Antirrhinum, ăn-tĭr-rī'uŭm.
Antisana, ăn-te-sah'nah.
Antiscians, ăn-tĭsh'e-ănz.
Antiseptic, ăn-te-sĕp'tĭk.
Antispasmodic, ăn-te-spăz-mŏd'ĭk.
Antispast, ăn'te-spăst.
Antistatis, ăn-tĭs'ta-sĭs.
Antistheues, ăn-tĭs'the-nēz.
Antistrophe, ăn-tĭs'tro-fe.
Anti-Taurus, ăn-te-taw'rŭs.
Antithesis, ăn-tĭth'e-sĭs.
Antitragus, ăn-tĭt'ra-gŭs.
Antitropous, ăn-tĭt'ro-pŭs.
Antium, ăn'she-ŭm.
Antivari, ăn-te-vah're.
Antlia, ănt'le-ah.
Antœci, ăn-te'she.
Antoine, ăn-twawn'.
Antommarchi, ăn-tŏm-măr'-ke.
Antonelli, ăn-to-nĕl'le.
Antonia, ăn-to'ne-ah.
Antoniu, ăn'to-nĭu.
Antoniuus, ăn-to-nĭ'nŭs.
Antoninasia, ăn-tŏn-o-ma'-zhah.
Antrim, ăn'trĭm.
Antucco, ăn-tuok'ko.
Antwerp, ănt'wŭrp.
Anubis, a-nu'bĭs.
Anus, a'nŭs.
Anville, ahn-vēl'.
Anxiety, ăngz-i'e-te.
Any, ĕn'e.
Anzin, ahn-zahn'.
Aonia, a-o'ne-ah.
Aosta, ah-ŏs'tah.
Apaches, ah-pah'chāz.
Apagogical, ăp-a-gŏg'ĭk-ăl.
Apalachicola, ăh-pah-lah-che-ko'lah.
Apam, ah-pahm'.
Apamana, ăp-ah-mah'mah.
Apanormia, ah-pah-nŏr'me-ah.
Apari, ah-pah're.
Apatelite, a-păt'e-līt.
Apathy, ăp'a-the.
Apatite, ăp'a-tīt.
Apelles, a-pĕl'lēz.
Apennines, ăp'ĕn-nīnz.
Apepsy, a-pĕp'se.
Aper, a'pŭr.
Apetalæ, a-pĕt'a-le.
Apex, a'pĕks.
Aphaniptera, ăf-a-nĭp'te-rah.
Aphanite, a'făn-īt.
Aphelion, a-fēl'yŭn.
Apheresis, a-fĕr'e-sĭs.
Aphis, a'fĭs.
Aphlogistic, ăf-lo-jĭs'tĭk.
Aphodidæ, a-fo'de-de.
Aphony, ăf'o-ne.
Aphorism, ăf'o-rĭsm.
Aphractus, a-frăk'tŭs.
Aphrodisia, ăf-ro-dĭz'yah.
Aphrodite, ăf-ro-dī'te.
Aphrophora, ăf-ro-fo'rah.
Aphthæ, ăf'the.
Aphthong, ăf'thŏng.
Aphthonite, ăf'thŏn-īt.
Aphtitalite, ăf-tĭt'a-līt.
Aphyllous, a-fĭl'lŭs.
Apiaceæ, a-pe-a'se-e.
Apicius, a-pĭsh'yŭs.
Apidæ, a'pe-de.
Apiine, a'pe-ĭn.
Apiocriuus, a-pe-o-kri'nŭs.
Apios, a'pe-ŏs.
Apis, a'pĭs.
Apistes, a-pĭs'tēz.
Apium, a'pe-ŭm.
Aplectrum, a-plĕk'trŭm.
Aplustre, a-plŭs'tŏr.
Apocalypse, a-pŏk'a-lĭps.
Apociuum, a-po'se-nŭm.
Apocopate, a-pŏk'o-păt.
Apocope, a-pŏk'o-pe.
Apocrypha, a-pŏk're-fah.
Apocynaceæ, a-po-sĭn-a'se-e.
Apodal, ăp'o-dăl.
Apodosis, ăp-o-do'sĭs.
Apogee, ăp'o-je.
Apograph, ăp'o-grăf.
Apolda, a-pŏl'dah.
Apollinarius, a-pŏl-le-na're-ŭs.
Apollo, a-pŏl'lo.
Apollonius, a-pŏl-lo'ne-ŭs.
Apollyon, a-pŏl'le-ŏn.
Apologue, ăp'o-lōg.
Apology, a-pŏl'o-je.
Aponeurosis, a-pŏn-u-ro'sĭs.
Apophasis, a-pŏf'a-sĭs.
Apophlegmatic, ăp-o-flĕg-măt'ĭk.
Apophthegm, ăp'o-thĕm
Apophyge, a-pŏf'e-je.
Apophyllite, a-pŏf'ĭl-līt.
Apophysis, a-pŏf'e-sĭs.
Apoplexy, ăp'o-plĕks-e.
Aporia, a-po're-ah.
Aposiopesis, a-pō-se-o-pe'sĭs.
Apostasy, a-pŏs'ta-se.
A posteriori, a pŏs-te-re-o're.
Apostle, a-pŏs'sl.
Apostrophe, a-pŏs'tro-fe.
Apotheca, a-pŏth'e-kah.
Apotheeium, a-po-the'shŭm.
Apotheosis, ăp-o-the'o-sĭs.
Apothesis, a-pŏth'e-sĭs.
Apotome, a-pŏt'o-me.
Apozem, ăp'o-zĕm.
Appal, ăp-pawl'.
Appalachian, ăp-pab-la'che-ăn.
Appanoose, ăp-pah-noos'.
Apparatus, ăp-pa-ra'tŭs.
Apparel, ăp-păr'el.
Apparitor, ăp-păr'e-tŏr.
Appellant, ăp-pĕl'lănt.
Appendicle, ăp-pĕn'de-kl.
Appendix, ăp-pĕn'dĭks.
Appeuzell, ăp-pănt-zāl'.
Apperception, ăp-pŭr-sĕp'-shŭn.
Appian, ăp'pe-ăn.
Appiani, ăp-pe-ah'ne.
Appin, ăp'pĭn.
Appius, ăp'pi-ŭs.
Appleby, ăp'pl-be.
Appledore, ăp-pl-dōr'.
Appletou, ăp'pl-tŭn.
Appliancy, ăp-plī'ăn-se.
Appoggiatura, ăp-pŏd-jah-too'rah.
Appomattox, ăp-po-măt'tŏks.
Apportionment, ăp-pōr'-shŭn-mĕnt.
Apposition, ăp-po-zĭsh'ŭn.
Appreciation, ăp-pre-she-a'-shŭn.
Apprentice, ăp-prĕn'tĭs.
Appropinque, ăp-pro-pĭnk'.
Appropriation, ăp-pro-pre-a'shŭn.
Appui, ăp-pwe'.
Appulsion, ăp-pŭl'shŭn.
Apraxin, ah-prahks'ĭn.
A priori, a pri-o're.
Apropos, ah-pro-po'.
Apsheron, ăp'shŭr-ŭn.
Apsis, ăp'sĭs.
Apsley, ăps'le.
Aptenodytes, ăp-tĕn'o-dīts.
Aptera, ăp'tŭr-ah.
Apteryx, ăp'tŭr-ĭks.
Aptitude, apt'e-tūd.
Aptote, ăp'tōt.
Apuleius, ăp-u-le'ŭs.
Apulia, ah-pu'le-ah.
Apure, ah-poor'.
Apurimac, ah-poo're-măk.
Apus, a'pŭs.
Apyretic, a-pĭr-ĕt'ĭk.
Apyrexy, ăp-e-rĕks'e.
Aqua, a'kwah.
— fortis, -fōr'tĭs.
— marina, -ma-re'nah.
Aquambo, ah-kwŏm'bo.
Aquapim, ah'kwah-pĕm.
Aqua Regiua, a'kwah re-ji'-nah.
— Regis, -re'jĭs.
Aqnariuu, a-kwa're-ŭm.
Aquasco, ah-kwăs'ko.
Aquatics, a-kwăt'ĭks.
Aquatint, a'kwah-tĭnt.
Aqua Tofana, -to-fah'nah.
— vitæ, -vi'te.
Aqueduct, ăk'we-dŭkt.
Aquelaou, ăk-kwa'la-ŏn.
Aqueous, a'kwe-ŭs.
Aquetta, ah-kĕt'tah.
Aquia, ăk'we-ah.
Aquifoliaceæ, a-kwe-fo-le-a'-se-e.
Aquila, ăk'we-lah.
Aquileia, ăk-we-la'yah.
Aquilegia, ăk-we-le'je-ah.
Aquiliuæ, ăk-wĭl'i-ne.
Aquiline, ăk'we-lĭn.
Aquilon, ăk'we-lŏn.
Aquilotes, ăk-we-lo'tēz.
Aquinas, a-kwi'năs.
Aquino, ah-ke'no.
Aquiras, ah-kwe'răs.

Calatabellota, kah-lah-tah-
Calatafimi, -fe'me.
Calatagiroue, -zhe-ro'na.
Calatañazor, -ah-thŏr'.
Calatanisetta, kah-lah-tăn-e-zĕt'tah.
Calatayud, kah-lah-tah-yood'.
Calathium, ka-la'the-ŭm.
Calatrava, kah-lah-trah'vah.
Calaveras, kăl-ah-va'răs.
Calcaneum, kăl-ka'ne-ŭm.
Calcasieu, kăl-kah-sū'.
Calcavella, kăl-kah-vĕl'lah.
Calceolaria, kăl-se-o-la're-ah.
Calc, kălk.
Calciferite, kăl-sĭf'ŭr-īt.
Calcigrade, kăl'se-grād.
Calcimine, kăl'se-mĭn.
Calcine, kal'sĭn.
Calcium, kăl'se-ŭm.
Calculus, kăl'ku-lŭs.
Calcutta, kăl-kŭt'tah.
Caldarium, kăl-da're-ŭm.
Caldas, kăl'dahs.
Calder, kawl'dŭr.
Calderon, kăl-da-rŏn'.
Caldron, kawl'drŭn.
Caldwell, kawld'wĕl.
Caleb, ka'lĕb.
Caleche, kah-lăsh'.
Caledonia, kăl-e-do'ne-ah.
Caledonite, kăl'e-dŏn-īt.
Calefaction, kăl-e-făk'shŭn.
Calembourg, kăl'ĕm-boor.
Calender, kăl'ĕn-dĕr.
Calends, kăl'ĕndz.
Calendula, ka-lĕn'dn-lah.
Calenture, kăl'ĕn-tŭr.
Calescence, ka-lĕs'sĕns.
Calf, kahf.
Calhoun, kăl-hoon'.
Cali, kah'le.
Calibre, kăl'e-bŭr.
Calicut, kal'e-kŭt.
Calidasa, kah-le-dah'sah.
California, kăl-e-fôr'ne-ah.
Caligation, kăl-e-ga'shŭn.
Caligula, kah-lig'u-lah.
Calipash, kăl-e-păsh'.
Calipers, kăl'e-pŭrz.
Caliph, ka'lĭf or kah'lĭf.
Callippus, ka-lĭp'pŭs.
Calisthenics, kăl-is-thĕn'ĭks.
Calix, ka'lĭks.
Calixtus, kah-lĭks'tŭs.
Caliyuga, kah-le-oo'gah.
Calk, kawk.
Calkin, kăl'kĭn.
Calla, kăl'lah.
Callaghan, kăl'lăh-ăn.
Callao, kăl-yah'o.
Callapooya, kăl-lah-poo'yah.
Callaway, kăl'lah-wa.
Callcott, kawl'kŭt.
Callianee, kăl-le-a-ne'.
Callichthys, kăl-lĭk'thĭs.
Callicratidas, kăl-le-krăt'e-
Callidium, kăl-lĭd'yŭm. [dăs.
Calligonum, kăl-lĭg'o-nŭm.
Calligraphy, kal-lig'ra-fe.
Callimachus, kal-lĭm'a-kŭs.
Callimanco, kăl-le-măng'ko.
Calling, kawl'ĭng.
Callinger, kăl-lĕn-geer'.
Callinicus, kăl-le-nī'kŭs.
Callinus, kăl-lī'nŭs.
Calliope, kăl-lī'o-pe.
Callistephus, kal-lĭs'te-fŭs.
Callisthenes, kăl-lĭs'the-nēz.
Callitrichaceæ, kăl-le-trĭk-
Callitris, kăl-lī'trĭs. [a'se-e.
Callosa, kăl-lo'sah.
Callosity, kăl-lŏs'e-te.
Callot, kah-lo'. [ulks.
Callotechnics, kăl-lo-tek'-
Callow, kăl'lo.
Calm, kahm.
Calmar, kahl'mär.
Calmet, kăl-ma'.
Calmucks, kal'mŭks.
Calne, kahn.
Calography, kah-lŏg'ra-fe.
Calomel, kăl'o-mĕl.
Calonne, kah-lŏn'.
Calophyllum, ka-lŏf'ĭl-lŭm.
Calopogon, ka-lŏp'o-gŏn.
Caloric, kab-lŏr'ĭk.
Calorimeter, kăl-o-rĭm'e-tŭr.
Calor Mordicans, ka'lor mŏr'de-kănz.
Calosoma, kăl-o-so'ne-ah.
Calotropis, kăl-ot'ro-pĭs.
Calotte, kah-lŏt'.
Calotype, kăl'o-tīp.
Caloyers, kah-loi'erz.
Calpe, kăl'pe.
Calpee, kal-pē'.
Calpurnia, kal-pŭr'ne-ah.
Calquing, kawk'ĭng. [tah.
Caltanisetta, kal-tăn-e-zĕt'-
Caltha, kăl'thah.
Calumba, kăh-lŭm'bah.
Calumet, kăl'ŭ-mĕt.
Calumny, kăl'ŭm-ne.
Calvados, kăl-vah-dōs'.
Calvart, kahl'vahrt.
Calvary, kăl'va-re.
Calve, kahv.
Calventura, kăl-văn-too'rah.
Calverl, kăl'vŭrt.
Calvi, kăl've.
Calville, kăl'vĭl.
Calvin, kăl'vĭn.
Calx, kălks.
Calybio, kah-lĭb'e-o.
Calyceraceæ, kăl-ĭs-ŭr-a'se-e.
Calycifloræ, kăl-e-sĭf'lo-re.

Calycle, kăl'e-kl.
Calydon, kăl'e-dŏn.
Calymene, kal-e-me'ne.
Calypso, kah-lip'so.
Calyptorrynchus, kăl-ip-tor-ring'kŭs.
Calyptræidæ, kăl-ip-tre'e-de.
Calystegia, kăl-is-te'je-ah.
Calyx, ka'liks.
Camacho, ka-mah'cho. [ănz.
Camaldulians, kăm-ăl-du'le-
Camapuan, kah-mah-pwawn'.
Camarauca, kah-mah-raw'kah
Camara, kah-mah'rah.
Camargo, kah-măr-go'.
Camargne, kah-mahrg'.
Camarilla, ka-mah-rĭl'yah.
Camassia, ka-măsh'yah.
Cambaeérès, kŏn-bah-sa-rĕs'.
Cambay, kăm-ba'.
Cambiaso, kăm-be-ah'so.
Cambium, kăm'be-ŭm.
Cambodia, kăm-bo'de-ah.
Camborne, kăm'bŏrn.
Cambratine, kăm'bra-tĭn.
Cambray, kŏn-hra'.
Cambria, kăm'bre-ah.
Cambric, kăm'brĭk.
Cambridge, kăm'brij.
Cambronne, kŏn-bron'.
Cambyses, kăm-bī'seez.
Camden, kăm'd'n.
Camellia, ka-mĕl'le-ah.
Camelopard, kăm'ĕl-o-părd.
Camelot, kăm'e-lŏt.
Camera, kăm'e-rah.
Cameraria, kăm-e-ra're-ah.
Camerino, kăm-a-re'no.
Camerlingo, kăm-ăr-leeng'go
Cameron, kăm'ŭr-ŏn.
Cameroons, kăm-ŭr-oonz'.
Cameta, kăm'e-tah.
Camilla, kah-mĭl'lah.
Camisade, kăm-e-sād'.
Camisards, kăm'e-sărdz.
Camœnæ, kăm-e'ne.
Camoens, kah-mo'ĕnz.
Camogli, kah-mōl'ye.
Camolin, kăm'o-lĭn.
Camomile, kăm'o-mīl.
Camonflet, kăm'ŏn-fla.
Campagna, kăm-palın'yah.
Campalgu, kăm-păn'.
Campan, kŏn-pŏn'.
Campana, kăm-pah'nah.
Campanales, kăm-pān'a-lēz.
Campanella, kăm-pah-nĕl'lah
Campanha, kăm-palın'ah.
Campanile, kăm-pa-ne'la.
Campannla, kăm-păn'n-lah.
Campbell, kăm'l *or* kăm'bl.
Campeachy, kăm-pēch'e.
Campestral, kăm-pĕs'tral.
Camphansen, kămp-how'zn.
Camphine, kăm'fēn.
Camphire, kăm'fīr.
Camphogens, kămf'o-jĕnz.
Camphor, kăm'fŭr.
Camphrone, kăm'frōn.
Camphuysen, kămp-hī'zn.
Campion, kăm'pe-ŏn.
Campistron, kăm-pees'trŏn.
Campo Formio, kăm'po fôr - me-o. [nēz.
Campomanes, kăm-po-ma'-
Campo Santo, kăm'po săn'to.
Campton, kămp'tŭn.
Campus Martius, kăm'pŭs mär'she-ŭs. [lŏt'ro-pŭs.
Campylotropous, kăm-pe-
Camus, kah'mŭs.
Cana, ka'nah.
Canaan, ka'năn.
Canada, kăn'a-dah.
Canadian, ka-na'de-ăn.
Canaille, kah-nāl'.
Canal, kah-nāl'.
Canale, kah-nah'la.
Canalis, kah-na'lis. [gwah.
Canandaigua, kăn-ăn-da'-
Canara, kah-nah'rah.
Canaries, kah-na'rēz.
Canaris, kah-nah'ris.
Canarium, kah-na're-ŭm.
Canary, kah-na're.
Canaster, kah-năs'tŭr.
Canceale, kŏn-kahl'.
Can-can, kăn-kăn'.
Cancel, kăn'sĕl.
Cancellaria, kăn-sĕl-la're-ah.
Cancelli, kăn-sĕl'le.
Cancer, kăn'sŭr.
Cancrold, kăng'kroid.
Candaee, kăn'dah-se.

Compote, kŏm-pōt'.
Comprador, kŏm'prah-dŏr.
Compromise, kŏm'pro-mīz.
Compton, kŏm'tŭn.
Comptroller, kŏn-trōl'lŭr.
Compunction, kŏm-pŭngk'-
Comte, kŏmt. [shŭn.
Comus, ko'mŭs.
Con amore, kŏn ah-mo're.
Conation, ko-na'shŭn.
Conceal, kŏn-sēl'.
Conceição, kŏn-sa-sŏwn(g)'.
Conceit, kŏn-seet'.
Conceive, kŏn-seev'.
Concepcion, kŏn-thĕp'the-on.
Conceptacle, kŏn-sĕp'ta-kl.
Conception, kŏn-sĕp'shŭn.
Concern, kŏn-sŭrn'.
Concert, kŏn'sŭrt.
Concertante, kŏn-sĕr-tăn'ta.
Concertina, kŏn-sŭr-te'nah.
Concerto, kŏn-sŭr'to.
Concession, kŏn-sĕsh'ŭn.
Conch, kŏngk.
Concha, kŏn'chah.
Conchagua, kŏn-chah'gwah.
Conchifer, kŏngk'e-fĕr.
Conchology, kŏn-kŏl'o-je.
Conchucos, kŏn-choo'kŏs.
Concierge, kŏn-sărj'.
Conciliabule, kŏn-sĭl'e-a-būl.
Concini, kŏn-che'ne.
Concinnity, kŏn-sĭn'ne-te.
Concise, kŏn-sīs'.
Conclusion, kŏn-kloo'zhŭn.
Concordat, kŏng-kŏr'dăt.
Concubinage, kŏn-ku'be-năj.
Concupiscence, kŏn-ku'pĭs-
sĕns.
Concussion, kŏn-kŭsh'ŭn.
Condé, kŏn-da'.
Condemn, kŏn-dĕm'.
Condigu, kŏn-dīn'.
Condiflac, kŏn-de-yäk'.
Condition, kŏn-dĭsh'ŭn.
Condom, kŏn'g)-dŏn(g)'.
Condorcet, kŏn-dŏr-sa'.
Condottierl, kŏn-dŏt-ya're.
Conduit, kŏn'dĭt.

Condyle, kŏn'dĭl.
Conecuh, ko-ne'kah.
Conegliano, ko-nāl-yah'no.
Conemaugh, kŏn-e-maw'.
Conestoga, kŏn-ēs-to'gah.
Conesus, ko-ne'sŭs.
Conewango, kŏn-e-wăng'go.
Confalon, kŏu'fah-lŏn.
Conferva, kŏn-fûr'vah. [shŭn.
Conflagration, kŏn-flah-gra'-
Conflation, kŏn-fla'shŭn.
Confront, kŏn-frŭnt'.
Confucius, kŏu-fu'shŭs.
Confuse, kŏn-fūz'.
Congaree, kŏng-gah-re'.
Conge, kŏnzh.
Congeries, kŏn-je're-ēz.
Congestion, kŏn-jĕst'yŭn.
Congius, kŏu'je-ŭs.
Congleton, kŏng'gl-tŭn.
Congou, kŏng'goo.
Congreve, kŏng'grēv.
Congruity, kŏu-groo'e-te.
Conhocton, kŏn-hŏk'tŭn.
Coni, ko'ne.
Conidia, ko-nĭd'yah.
Coniferæ, ko-nĭf'e-re.
Coniroster, ko-ne-rŏs'tŭr.
Conium, ko'ne-ŭm.
Conjecture, kŏn-jĕkt'yŭr.
Conjunct, kŏn-jŭnkt'.
Conklin, kŏngk'lĭn.
Connaught, kŏn'nawt.
Connecticut, kŏn-nĕt'e-kŭt.
Connection, kŏn-nĕk'shŭn.
Connemara, kŏn-ne-mah'rah.
Connesauga, kŏn-ne-saw'gah.
Connoisseurship, kŏn-nois'-mŏn(g)'.
Connoisseur, kŏn-nĭs-soor'.
Connubial, kŏn-nu'be-ăl. [ŭm.
Conocardium, ko-no-kär'de-
Conococheague, kŏn-o-ko-chēg'.
Conohelix, kŏn-o-he'lĭks.
Conops, ko'nŏps.
Conquer, kŏng'kŭr.
Conquest, kŏngk'wĕst.
Conradin, kŏn'răd-ĭn.
Consanguinity, kŏn-săng-gwĭn'e-te.
Conscience, kŏn'shenz.
Conscience (Henry), kŏn-
Conscions, kŏn'shŭs. [se-ŏns'.
Conscript, kŏn'skrĭpt.
Consegnina, kŏn-se-ge'nah.
Consequence, kŏu'se-kwĕnz.
Conservation, kŏn-sŭr-va'-shŭn.
Conservatoire, kŏn-sär-vah-
Conserve, kŏn-sûrv'. [twahr'.
Consign, kŏn-sīn'.
Consignee, kŏn-sīn-ē'.
Console, kŏn-sōl'.
Consols, kŏn'slz.
Con Sordini, kŏn sŏr-de'ne.
Conspicuity, kŏn-splk'ŭ-e-te.
Conspiracy, kŏn-spĭr'a-se.
Constable, kŭn'sta-bl.
Constance, kŏn'stăns.
Constantia, kŏn-stăn'she-ah.
Constantine, kŏn-stăn-tīn'.
Constantinople, kŏn-stăn-te-no'pl.
Constantius, kŏn-stăn'shŭs.
Constitucion, kŏn-ste-too'the-ōn.
Constitution, kŏn-ste-tu'shŭn
Constringe, kŏn-strĭnj'. [sbŭn.
Construction, kŏn-strŭk'-
Consuetude, kŏn-swe'tūd.
Consume, kŏn-sūm'.
Consumption, kŏn-sŭm'shŭn
Contagion, kŏn-ta'jŭn.
Contarini, kŏn-tah-re'ne.
Contempt, kŏn-tĕmt'.
Contentny, kŏn-tĕnt'ne.
Conti, kŏn'te.
Contiguity, kŏn-te-gu'e-te.
Contingency, kŏn-tĭn'jĕn-se.
Continue, kŏn-tĭn'yoo.
Contortion, kŏn-tôr'shŭn.
Contour, kŏn-toor'.
Contraband, kŏn'tra-bănd.
Contrabasso, kŏn-trah-bäs'so.
Contralto, kŏn-träl'to.
Contrary, kŏn-tra're. [vah.
Contrayerva, kŏu-trăh-hĕr-
Contreras, kŏn-tra'räs.
Contretemps, kŏn-tr-tŏn(g)'.
Contrusion, kŏn-troo'shŭn.
Contuse, kŏu-tūz'. [sĕuz.
Convalescence, kŏn-va-lĕs'-
Convection, kŏu-vĕk'shŭn.
Convention, kŏn-vĕn'shŭn'.
Converge, kŏn-vŭrj'. [shŭn.
Conversation, kŏn-vûr-sa-
Conversazione, kŏn-vär-sät-
Converse, kŏn-vûrse'. [se-o'ne.
Conversion, kŏn-vûr'shŭn.
Convert, kŏn'vûrt, *and* kŏn-
Convey, kŏn-va'. [vûrt'.
Conviet, kon'vĭkt, *and* kŏn-
Convive, kŏn'veev. [vĭkt'.
Convocation, kŏn-vo-ka'shŭn.
Convolute, kŏn'vo-lūt.
Convolvulus, kŏn-vŏl'vu-lŭs.
Convoy, kŏn'voi.
Convulsions, kŏn-vŭl'shŭnz.
Conway, kŏn'wa.
Cony, ko'ne.
Conyers, kŏn'yŭrz.
Conyngham, kŭn'nĭng-ăm.
Coolbaugh, kool'baw.
Coolie, koo'le. [wätch-e.
Coosawhatchie, koo'sah-
Copaiba, ko-pa'bah.
Copais, ko-pa'ĭs.
Copan, ko-pän'.
Copeck, ko'pĕk.
Copenhagen, kōp'n-ha'gn.
Copernicus, ko-pŭr'ne-kŭs.
Cophosis, ko-fo'sĭs.
Copiah, ko-pe'ah.
Copiapo, ko-pe-ah-po'.
Copious, ko'pe-ŭs.
Copley, kŏp'le.
Copperas, kŏp'pŭr-ăs.
Coppet, kŏp-pa'.
Coppice, kŏp'pĭs.
Coprophagus, kŏp-rŏf'a-gŭs.
Copse, kŏpz.
Copula, kŏp'u-lah.
Copy, kŏp'e.
Coquago, ko-kwah'go.
Coquetry, ko'kĕt-re.
Coquette, ko-kĕt'.
Coquille, ko-keel'.
Coquimbo, ko-keem'bo.
Coracias, ko-ra'shăs.
Coracite, kŏr'a-sīt.
Coracle, kŏr'a-kl.
Coral, kŏr'al.
Corallorhiza, kŏr-al-lo-rī'zah
Coram non judice, ko'ram nŏn jū'de-se.
Coranach, kŏr'a-năk.
Corbach, kŏr'bäk.
Corbean, kŏr-bo'.
Corbeil, kŏr-bĕl'.
Corbie, kŏr'be.
Corchorus, kŏr'ko-rŭs.
Corcoran, kŏr'ko-răn.
Corcovado, kŏr-ko-vah'do.
Corcyra, kŏr-sĭ'rah.
Corday, kŏr-da'.
Cordeliers, kŏr-de-leerz'.
Cordial, kŏrd'e-ăl.
Cordillera, kŏr-dĕl-ya'rah.
Cordova, kŏr'do-vah.
Corduroy, kŏr-doo-roĭ'.
Cordwainer, kŏr'dĭn-ûr.
Corea, ko-re'ah.
Corelli, ko-rĕl'le.
Corentyn, ko-rĕn'tĭn.
Coreopsis, ko-re-ŏp'sĭs.
Coresus, ko-re'sŭs.
Corfu, kŏr-foo'.
Coriaceous, ko-re-a'shŭs.
Coriandum, ko-re-ăn'dŭm.
Corigliano, ko-reel-yah'no.
Coringa, ko-rĭng'gah.
Corinna, ko-rĭn'nah.
Corinth, kŏr'ĭnth.
Coriolanus, ko-re-o-la'nŭs.
Corium, ko're-ŭm.
Cormeuin, kŏrm-nahn'.
Cormophytes, kŏr-mŏf'e-tēz.
Cormorant, kŏr'mo-rănt.
Cornaro, kŏr-nah'ro.
Cornea, kŏr'ne-ah.
Corneille, kor-na'ye.
Cornelia, kŏr-ne'le-ah.
Cornell, kŏr-nĕl'.
Coruemuse, kŏrn-mūz'.
Corneous, kŏr'ne-ŭs.
Cornetcy, kŏr'uĕt-se.
Coruice, kŏr'nĭs.
Cornopean, kŏr-no'pe-ăn.
Cornucopia, kŏr-nu-ko'pe-ah.
Cornwall, kŏrn'wawl.
Cornwallis, kŏrn-wŏl'lĭs.
Corocore, kŏr'o-kōr.
Corollary, kŏr'ŏl-la-re.
Coromandel, kŏr-o-măn'dĕl.
Coronach, kŏr'o-năk.
Coronamen, kŏr-o-na'mĕn.
Coronation, kŏr-o-na'shŭn.
Coroner, kŏr'o-nŭr.
Coronule, kŏr'o-nūl.
Corporal, kŏr'po-răl.
Corporation, kŏr-po-ra'shŭn.
Corporeal, kŏr-po're-ăl.
Corposant, kŏr'po-zant.
Corps, kŏr.
— d'Armée, -dăr-ma'. [măt'ĕk'.
— Diplomatique, dē-plo-
Corpse, kŏrps. [krĭs'te.
Corpus-Christi, kŏr'pŭs-
Corpuscle, kŏr'pŭ-sl.
Correct, kŏr-rĕkt'.
Correggio, kŏr-rĕd'jo.
Corrèze, kŏr-răz'.
Corridor, kŏr're-dŏr.
Corrientes, kŏr-re-ĕn'tĕz.
Corrigendum kŏr-re-jĕn'dŭm
Corroborant, kŏr-rŏb'o-rănt.
Corroslon, kŏr-ro'zhŭn.
Corrupt, kŏr-rŭpt'.
Corsage, kŏr'säj.
Corsair, kŏr'sär.
Corselet, kŏrs'lĕt.
Corsica, kŏr'se-kah.

Devoir, de-vwah'.
Devou, dĕv'n.
Dew, dū.
Dewees, da-wēz'.
Dewlap, dū'lăp.
Dewy, dū'e.
Dextriu, dĕks'trĭn.
Dey, da.
Dhalae, dah-lahk'.
Dharwar, dahr'wahr. [gār'e.
Dhawalagiri, dah-wŏl-ah-
Dhoolpore, dool-poor'.
Diabase, dī'a-bās.
Diabetes, di-a-be'tēz.
Diablerie, dē-ăb-l-re'.
Diabrosis, dī-a-bro'sĭs.
Diacatholicon, di-a-kah-thol'e-kŏn.
Diacaustie, di-a-kawz'tĭk.
Diachylon, di-ăk'e-lŏn.
Diacodium, di-a-kōd'yŭm.
Diaconal, di-ăk'o-năl.
Diaconstie, di-a-koos'tĭk.
Diadelphia, di-a-dĕl'fe-ah.
Diadumedianus, dī-ah-du-me-de-a'nŭs.
Diæresis, di-a-re'sĭs.
Diaglyphie, di-a-glĭf'ĭk.
Diagnosis, di-ăg-no'sĭs.
Diagoras, di-ăg'o-răs.
Diagram, di'a-grăm.
Diagrydiate, di-a-grĭd'e-āt.
Dialect, di'a-lĕkt.
Dialogism, di-ăl'o-jĭzm.
Dialogue, di'a-lŏg.
Dialysis, di-ăl'e-sĭs.
Diamaute, de-ah-măn'ta.
Diameter, di-ăm'e-tŭr.
Diamoud, di'mŭnd.
Diana, di-ăn'ah. [da pwah-te-a'.
Diane de Poitiers, de-ah-na
Dianoetic, di-a-no-ĕt'ĭk.
Dianthus, di-ăn'thŭs.
Diapasou, di-a-pa'zŭn.
Diaper, di'a-pŭr.
Diaphaue, di'a-făn.
Diaphoresis, di-a-fo-re'sĭs.
Diapluragm, di'a-frăm.
Diapophysis, di-a-pŏf'e-sĭs.
Diarbekir, de-ăr-be-kēr'.
Diarehy, di'ăr-ke.
Diarrhea, di-ăr-re'ah.
Diarthrosis, di-ăr-thro'sĭs.
Diary, di'a-re.
Dias, de'ahth.
Diaschisiua, dī-ăs-kĭz'mah.
Diastase, di'ăs-tāz.
Diastole, di-ăs-to'le.
Diastyle, di'a-stĭl.
Diatessaron, dī-a-tĕs'sa-rŏn.
Diathesis, di-ăth'e-sĭs.
Diatoma, di-a-to'mah.
Diatribe, di'a-trĭb.
Diaz, de'ahth.
Dibranchiate, di-hrăng'ke-āt
Dicephalous, di-sĕf'a-lŭs.
Dichastasis, dī-kăs'ta-sĭs.
Dichlamydeous, di-kla-mĭd'e-ŭs.
Dichotomy, di-kŏt'o-me.
Dichroism, di'kro-ĭzm.
Dickinson, dĭk'ĭn-sn.
Dicoccous, di-kŏk'kŭs.
Dicotyledon, di-kŏt-e-le'dŏn.
Dictamnus, dĭk-tăm'nŭs.
Diction, dik'shŭn.
Dictum, dik'tŭm.
Dictyogens, dĭk-tĭ'o-jĕnz.
Dictyophyllum, dĭk-tŏf'ĭl-lŭm. [kre-tĕu'sĭs.
Dictys Cretensis, dĭk'tĭs
Didactyl, di-dak'tĭl.
Didapper, dĭd'ăp-pŭr.
Didelphidæ, di-dĕl'fe-de.
Diderot, dĕd-ro'. [lah-sōv'.
Didier-la-Seauve, de-de-a-
Didius, dĭd'e-ŭs.
Dido, dī'do.
Didot, de-do'.
Didraehm, dī'drăm.
Didymium, de-dim'e-ŭm.
Di'lyuamia, dĭd-e-na'me-ah.
Die, di.
Dié, de-a'.
Diebitsch, de'bĭch.
Dieffeubach, dĕf'ĕn-băk.
Diegesis, di-e-je'sĭs.
Diego, de-ah'go.
Diemen, dē'mĕn.
Diepenbeek, de'pĕn-bĕk.
Dieppe, de-ĕp'.
Dies Iræ, dī'ēz ī're.
Diesis, di'e-sĭs.
Dies uon, dī'ēz uŏn.
Diest, dēst.
Dieteties, di-e-tĕt'ĭks.
Dietbyliu, di-ĕth'e-lĭn.
Dieu et mon Droit, de-oo a nuŏn(g)-drwaw'.
Differentia, dĭf-fĕr-ĕn'she-ah.
Ditlractiou, dĭf-frăk'shŭn.
Ditfuse, dĭf-fūz'.
Digamma, di-găm'mah.
Digby, dig'be.
Digenesis, di-jĕn'e-sĭs.
Digestion, de-jĕst'yŭn.
Diglut, dĭt.
Digitalis, dĭj-e-ta'lĭs.
Digitigrade, dĭj'e-te-grād.
Diglyph, di'glĭf.
Digraph, di'grăf.
Digressiou, de-grĕsh'ŭu.
Digynian, di-jĭn'e-ăn.
Dii, di'i.
Diiambus, di-i-ăm'bŭs.
Dijon, de-zhŏn(g)'.
Dilatatiou, dĭl-a-ta'shŭn.
Dile"mma, de-lĕm'mah.
Dilettante, dĭl-ĕt-tăn'ta.
Diligence, { *Eng.* dĭl'i-jĕns. *Fr.* de-le-zhŏog'.
Dillersville, dĭl'ŭrz-vĭl.
Dillon, dĭl'lŭn.
Diluent, dĭl'u-ĕnt.
Dilnvium, de-loo've-ŭm.
Dimaguerite, di-măg'nŭr-īt.
Dimension, di-mĕn'shŭn.
Dimeter, dĭm'e-tŭr.
Diuidiate, de-mĭd'e-āt.
Diminuendo, de-mĭu-u-ĕn'do.
Diminution, dĭm-e-nu'shŭn.
Diunity, dĭm'e-te.
Dimorphanthus, dĭm-ŏr-făn'thŭs.
Dimorphism, de-mŏr'fĭzm.
Dimple, dim'pl.
Dimyarias, dĭm-ya're-ăs.
Dinagepoor, de-uăj-poor'.
Dinah, di'nah.
Dinant, de-nŏn(g)'.
Dinar, di'năr.
Dingelstedt, dĭng'ĕl-stĕt.
Dingey, dĭng'ge.
Dingle, dĭng'gl.
Dingy, diu'je.
Dinornis, di-uŏr'nĭs. [ŭm.
Dinotherium, di-no-the're-
Dinsmore, dinz'mōr.
Dinwiddie, dĭn-wĭd'de.
Diocese, dī'o-seez.
Dioeletian, di-o-kle'shăn.
Diodon, dī'o-dŏn. [rus sĭk'u-lŭs.
Diodorus Siculus, di-o-do'-
Dioeious, di-e'shŭs.
Diogenes, di-ŏj'e-nēz.
Dionedes, di-o-me'dēz.
Dionæa, di-o-ne'ah.
Dion Cassius, di-ŏn kăsh'yŭs.
Dione, di-o'no.
Dionysius, di-o-nĭsh'e-ŭs.
Diophantine, di-o-făn'tĭn.
Diopsis, di-ŏp'sĭs.
Dioptase, di-ŏp'tāz.
Dioraina, di-o-rah'mah.
Diorthosis, di-ŏr-tho'sĭs.
Dios, de'ŏs.
Dioscorides, di-ŏs-kŏr'e-deez.
Diospyros, di-ŏs'pe-rŏs.
Dioxylite, di-ŏks'e-lĭt.
Dipaschal, dĭ-păs'kăl.
Diphryges, dĭf're-jēz.
Diphtheria, dĭf-the're-ah.
Diphthong, dĭp'thong *or* dĭf'thŏng. [skŏp.
Dipleidoscope, de-pli'do-
Diplintlins, di-plĭn'the-ŭs.
Diploma, de-plo'mah.
Diplopia, de-plo'pe-ah.
Diplotegia, dĭp-lo-te'je-ah.
Dipody, dĭp'o-de.
Dipsacaceæ, dĭp-sa-ka'se-e.
Dipsomania, dĭp-so-ma'ne-ah.
Dipsosis, dĭp-so'sĭs.
Diptera, dĭp'te-rah.
Dipteryn, dĭp'tŭr-ĭn.
Diptych, dĭp'tĭk.
Dirae, di're.
Direa, dŭr'kah.
Directrix, de-rĕkt'rĭks.
Direption, de-rĕp'shŭn.
Dirge, dŭrj.
Dirigc, dĭr'e-je.
Dirk, dŭrk.
Diruption, de-rŭp'shŭn.
Di Salto, de săl'to.
Disaster, dĭz-ăs'tŭr.
Diseern, dĭz-zŭrn'.
Diseiple, dĭs-si'pl.
Diseipline, dĭs'se-plĭn.
Diseoplenra, dĭs-ko-ploo'rah.
Discordia, dĭs-kŏr'de-ah.
Discourse, dĭs kōrz'.
Discover, dĭs'kŭv-r.
Disens, dĭs'kŭs.
Discuss, dĭs-kŭs'.
Disentient, dĭs-kŭ'shĕnt.
Disease, dĭz-ēz'.
Disgnise, dĭz-gīz'.
Dishonor, dĭz-ŏu'ŭr.
Disnal, dĭz'măl. [re.
Dispensatory, dĭs-pĕn'sa-to-
Dispose, dĭs-pōz'.

Gabardine or **Gaberdine,**
Gabble, găb'bl.
Gabel, ga'bl.
Gaberlunzie, găb-ŭr-lŭn'ze.
Gabinius, ga-bĭn'e-ŭs.
Gabion, ga'be-ŭn.
Gable, gā'bl.
Gaboon, gah-boon'.
Gabrielle d'Estrées, găb-re-ĕl da-trā'.
Gadames, gah-dah'mĕz.
Gadara, găd'a-rah.
Gaddlel, găd'dĕl.
Gadidæ, găd'e-de.
Gadltanian, găd-e-ta'ne-ăn.
Gadolinite, găd'o-lĭn-īt.
Gador, gah'dōr.
Gadsden, găds'dĕn.
Gaelie, gahl'ĭk *or* gāl'ĭk.
Gaëta, gah-a'tah.
Gage, gāj.
Gahnite, gahn'īt.
Galnsay, gān-sā'.
Galnsborough, gānz'bŭr-ro.
Gait, gāt.
Gains, gā'ŭs.
Gala, ga'lah.
Galago, ga-la'go.
Galanthis, ga-lăn'thĭs.
Galantine, gal-ăn-teen'.
Galapagos, gah-lah-pah'gōs.
Galatæa, gal-a-te'ah.
Galatia, ga-la'she-ab.
Galatz, gah-lăts'.
Galaxy, găl'ăks-e.
Galba, gal'bah
Galbanum, găl-ba'nŭm.
Galea, ga'le-ah.
Galega, gah-le'gah.
Galen, ga'lĕn.
Galena, ga-le'nah.
Galeopsis, găl-e-ŏp'sĭs.
Galerius, ga-le're-ŭs.
Galiaceæ, găl-e-a'se-e.
Galiano, gal-e-ah'no.
Galicia, gal-ĭsh'e-ah.
Galilee, gal'e-le.
Galilel, gah-le-la'e.
Galiot, gal-e-ŏt'.
Galipea, găl-e-pe'ah.
Galitzin, gal-lĭt'sĭn.
Galium, ga'le-ŭm.
Gall, gawl.
Galland, gah-lŏn(g)'.
Gallant, gal'lănt *and* găl-lănt'.
Gallas, gal'lăs.
Gallatin, { *Eng.* găl'lah-tĭn. *Fr.* gah-lah-tabn'.
Gallandet, găl-law-dĕt'.
Galleon, găl'le-ŏn.
Gallia, gal'le-ah.
Galliard, gal'yahrd.
Gallienus, gal-le-e'nŭs.
Gallimanfry, găl-le-maw'fre.
Gallinæ, gal'le-ne.
Gallipoli, găl-lĭp'o-le.
Gallitzin, gal-lĭt'sĭn.
Gallopade, găl-lo-pād'.
Galloway, gal'lo-wa.
Galls, gawlz.
Gallus, gal'lŭs.
Galoparo. gah-lo-pah'ro.
Galore, ga-lōr'.
Galvani, gal-vah'ne.
Galveston. găl'vĕs'tŭn.
Gama, gah'mah.
Gamaliel, ga-ma'le-ĕl.
Gambado, găm-ba'do.
Gambia, găm'be-ah.
Gambler, găm'be-ŭr.
Gamble, găm'bl.
Gambroon, găm-broon'.
Gamin, gah-mahn'.
Gamut, găm'ŭt.
Gananoque, gah-nah-nŏk'.
Ganges, găn'jēz.
Gangpore, găng-poor'.
Gangue, găng.
Ganoids, găn'oidz.
Ganomatite, ga-nŏm'a-tīt.
Ganymede, găn'e-mēd.
Gaol, jāl.
Garancine, găr'ăn-sēn.
Garble, găr'bl.
Gareias, găr-the'ăs.
Garcilaso de la Vega, găr-the-lah'so da lah va'gah.
Garda, găr'dah.
Gardenia, găr-de'ne-ah.
Gardiner, gărd'nŭr.
Gardyloo, gărd-e-loo'.
Gargarus, găr'ga-rŭs.
Gargle, găr'gl.
Gargoyle, găr'goil.
Garibaldi, gah-re-băl'de.
Garlaseo, găr-lās'ko. [pah-zha';
Garnier-Pagès, găr-ne-a'-
Garnishee, găr-nish-ē'.
Garniture, găr'ne-tŭr.
Garonne, gah-rŏn'.
Garoo, gah-roo'.
Garous, ga'rŭs.
Garrison, găr're-sn.
Garrote, gah-rōt'.
Gas, găs or găz.
Gascony, găs'ko-ne.
Gaspé, găs'pa.
Gassendi, găs-sĕn'de.
Gasteropod, găs-tĕr'o-pŏd.
Gaston, găs'tŏn.
Gastralgia, găs-trăl'je-ah.
Gastritis, găs-trī'tĭs.
Gastroeele, găs'tro-sēl.
Gastrodynia, găs-tro-dĭn'yah.
Gastronomy, găs-trŏn'o-me.
Gata, gah'tah.
Gauchos, go'chŏs.
Gaud, gawd.
Gauge, gāj.
Gaultheria, gawl-the're-ah.
Gauntlet, gānt'lĕt.
Gaura, gaw'rah.
Gautier, go-te-a'.
Gavarni, gah-văr'ne.
Gavazzi, gah-vät'se.
Gaveston, gāv'ĕs'tŭn.
Gavial, ga've-ăl.
Gavot, gāv'ŏt.
Gawelghur, găv-ĕl-goor'.
Gaya, ga'yah.
Gay-Lussac, ga-loos'sak.
Gayoso, ga-o'zo.
Gaza, ga'zah.
Gaze, gāz.
Gazette, ga-zĕt'.
Gazogene, găz'o-jēn.
Géant, zha-ŏn(g)'.
Gear, jeer.
Geauga, je-aw'gah.
Geber, ge'bŭr.
Gédlé, yĕv'la.
Gehenna, je-hĕn-nah.
Gehlenite, ga'lĕn-īt.
Geilerite, gīl'ŭr-īt.
Geine, jē'ĭn.
Gelasius, je-la'zhŭs.
Gelidium, je-lĭd'e-ŭm.
Gellius, jĕl'le-ŭs.
Gem, jĕm
Gemara, je-mah'rah.
Gemelli, jĕm'e-ni.
Gemma, jĕm'mah.
Gemmi, gĕm'me.
Gemsboek, jĕmz'bŏk. [re.
Gendarmerie, zhŏn-dar'ma-
Gender, jĕn-dŭr.
Genealogy, jĕn-e-ăl'o-je.
Genera, jĕn'ŭr-ah. [se-mo.
Generalissimo, jĕn-ŭr-ăl-ĭs'-
Generosity, jĕn-ŭr-ŏs'e-te.
Genesis, jĕn'e-sĭs.
Genet, zha-na'.
Geneva, jĕn-ē'vah.
Genevieve, jĕn-a-veev'.
Genghis-Khan, jăn'gees
Genial, je'ne-ăl. [kahn'.
Genil, ha-neel'.
Genioglossi, je-ne-o-glŏs'si.
Genista, jĕn-ĭs'tah.
Genitive, jĕn'e-tĭv.
Genlus-loci, jĕn'yus-lo'si.
Gennesareth, jĕn-nĕz'a-rĕth.
Genoa, jĕn'o-ah.
Genouillère, zhnool-yār'.
Genre, zhong'r.
Gens, jzhŏnz.
Genseric, jĕn'sŭr-ĭk.
Genteel, jĕn-teel'.
Gentian, jĕn'te-ăn.
Gentle, jĕn'tl.
Genuflexion, jĕn-u-flĕk'shŭn.
Genuine, jĕn'u-ĭn.
Geodesy, je-ŏd'e-se.
Geoffrey, jĕf'fre.
Geoffrin, zho-frahn'.
Geoffroy, zho-frwaw'.
Geoglossum, je-o-glŏs'sŭm.
Geognosy, je-ŏg'no-se.
Geography, je-ŏg'ra-fe.
Geometry, je-ŏm'e-tre.
Geomyrieite, je-o-mlr'e-sĭt.
Geoponies, je-o-pŏn'ĭks.
Georama, je-o-răm'ah.
Georgia, jŏr'je-ah.
Gepidæ, jĕp'e-de.
Gera, ga'rah.
Gerard, { *Fr.* zha-rahr'. *Eng.* jĕr'ărd.
Gerfalcon, jĕr'faw-kn.
Gerhardt, gär'härt.
Gerieault, zha-re-ko'.
Gerizim, ge-ri'zĭm.
Germ, jŭrm. [mahn-ŏn(g)-la'.
Germain-en-Laye, zhär-
German, jŭr'man.
Germanicus, jŭr-măn'i-kŭs.
Gerocomia, jŭr-o-ko'me-ah.
Gerry, jĕr're.
Gers, zhär.
Gerson, zbär-sŏn'.
Gerstæeker, jŭr'stĕk-kŭr.
Gertrude, gĕr'trood.
Gervinus, jĕr-ve'nŭs.
Geryon, je're-ŏn.
Gesenius, je-seen'yŭs.
Gesner, gĕs'nĕr.
Gesta Romanorum, jĕs'ta ro-măn-o'rŭm.
Gestation, jĕs-ta'shŭn.
Gesture, jĕst'yŭr.
Geta, je'tah.
Getæ, je'te.
Gethsemane, gĕtb'se-mān.
Gettysburg, gĕt'tlz-bŭrg.
Geum, je'ŭm.
Geyser, gī'sĕr.
Ghazepoor, gāz-e-poor'.
Ghent, ghĕnt.
Gherlali, ge-rī'ah.
Ghetto, ghĕt'to.
Ghibellines, gĭb'ĕl-lĭnz.
Ghiberti, ghe-bĕr'te.
Ghika, ghē'kah.
Ghirlandalo, gĕr-lăn-dī'o.
Ghizeli, ghe'za.
Ghogra, go'grah.
Ghost, gōst.
Giant, jī'ănt.
Giaveno, jah-va'no.
Gibbet, jĭb'bĭt.
Gibbon, gĭb'bŏn.
Gibbosite, gĭb'bo-sĭt.
Gibeon, gĭb'e-ŏn.
Giblets, jĭb'lĕts.
Gibraltar, jĭb-rawl'tŭr.
Gibson, gĭb'sŭn.
Gideon, gĭd'e-ŏn.
Gieu, zhe-an(g)'.
Giessen, gees'sĕn.
Gigantolite, jĭ-găn'to-līt.
Giglio, jēl'yo.
Gihon, gī'ŏn.
Gilbert, gĭl'bŭrt.
Gildas, gĭl'dăs.
Gilead, gĭl'e-ăd.
Giles, jīlz.
Gill, gĭl *and* jĭl.
Gillenia, jĭl-le'ne-ah.
Gillespie, gĭl-lĕs'pe *or* jĭl-lĕs'pe
Gilolo, je-lo'lo.
Gimbal, gĭm'băl.
Gimerack, jĭm'krăk.
Ginger, jĭn'jŭr.
Ginkell, gĭng'kĕl.
Gioberti, jo-bĕr'te.
Gioja, jo'yah.
Giordano, jŏr-dah'no.
Giorgione, jŏr-jo'nah.
Giotto, jŏt'to.
Giovenazzo, jo-vah-nät'so.
Giraldi, je-rahl'de.
Giraldus Cambrensis, jĭr-ăl'dŭs kăm-brĕn'sĭs.
Girandole, jĭr'ăn-dōl.
Girard, { *Eng.* je-rărd'. *Fr.* zhe-rahr'.
Girardin, zhe-rahr-dahn'.
Girasol, jĭr'a-sōl.
Girder, gŭrd'ŭr.
Girdle, gŭr'dl.
Girgeh, jĕr'ja.
Girgenti, jĭr-jĕn'te.
Girl, gŭrl.
Girodet, zhe-ro-da'.
Gironde, zhe-rŏnd'.
Girth, gŭrth.
Gismondite, jĭs'mŏnd-īt.
Giuliano, joo-le-ah'no.
Giulio Romano, joo'le-o ro-
Give, gĭv. [mah'no.
Glaeial, gla'shăl.
Glaeier, glās'e-ŭr.
Glaeis, gla'sĭs.
Gladiator, glăd'e-ā-tŏr.
Gladiolus, gla-dī'o-lŭs.
Gladova, glah-do'vah.
Gladstone, glăd'stūn.
Glamorgan, gla-mŏr'găn.
Glaphyra, gla-fī'rah.
Glare, glār.
Glastonbury, glăs'tn-bŭr-re.
Glatz, glahtz,
Glauber, glow'bĕr.
Glanehan, glŏw'kŏw.
Glaucium, glaw'se-ŭm.
Glaucus, glaw'kŭs.
Glaux, glo.
Gleetroma, glĕk'trō'mah.
Gleditsehia, gle-dĭt'shah.
Gleim, glīm.
Glenmalure, glĕn-ma-loor'.
Glisten, glĭs'n.
Globularia, glŏb-n-la're-ah.
Gloehis, glo'kis.
Glogau, glo'gŏw.
Glomeration, glŏm-ŭr-a'shŭn
Glossitis, glŏs-sī'tĭs.
Glossology, glŏs-sŏl'o-je.
Glove, glŭv.
Gloxinia, glŏk-sĭn'yah.
Glueina, gloo-si'nab.
Gluek, glook.
Glucose, glū'kōz.
Glue, gloo.
Glumelle, gloo-mĕl'.
Glutination. gloo-tĭn-a'shŭn.
Glycerine, glĭs'ŭr-ĭn.
Glyeirrhiza, glĭs-ir-rī'zah.
Glyptodon, glĭp'to-dŏn.
Glyptotheea, glĭp-to-the'kah.
Gmelinite, mĕl'ĭn-īt.
Gnaphallum, na-fa'le-ŭm.
Gnu, nū.
Goa, go'ah.
Goar, go'ăr.
Gobelin, gŏb'e-lln.
Gobi, go'be.
Gobldæ, gŏb'e-de.
Godavery, go-da'vŭr-e.
Godfrey, gŏd'fre.

Snivel, snĭv'l.
Snow-ball, sno'bawl.
Snyders, snī'dûrz.
Soavamente, so-ah-va-mĕn'ta.
Soboles, sŏb'o-leez.
Sobriquet, so-bre-ka'.
Socialism, so'shăl-izm.
Socinians, so-sin'e-ănz.
Sockdolager, sŏk-dŏl'a-jûr.
Socle, so'kl.
Socotra, sŏk'o-trah.
Socrates, sŏk'ra-teez.
Soda, so'dah.
Sodium, so'de-ŭm.
Sodom, sŏd'ŏm.
Sofala, so-fah'lah.
Soflioni, sŏt-fe-o'ne.
Soft, so'fe.
Soirée, swah-ra'.
Soissons, swah-sŏn(g)'.
Solanales, so-lan'a-leez.
Solania, so-la'ne-ah.
Solano, so-lah'uo.
Solar, so'lăr.
Solder, so'dûr.
Soldier, sōl'jûr.
Solfanaria, sŏl-fah-nah're-ah.
Solfatara, sŏl-fah-tah'rah.
Solfeggio, sŏl-fĕd'jo.
Solferino, sŏl-fa-re'no.
Solicitons, so-lĭs'e-tŭs.
Solidago, sŏl-e-dah'go.
Solifidian, sŏl-e-fĭd'yan.
Solitaire, sŏl-e-tār'.
Sollecito, sŏl-le-che'to.
Solomon, sŏl'o-mŏn.
Solon, so'lŏn.
Solstice, sŏl'stĭs.
Solus, so'lŭs.
Solyman, sŏl'e-măn.
Somateria, sŏm-a-te're-ah.
Sombrero, sŏm-bra'ro.
Somerset, sŭm'ĕr-sĕt.
Somme, sŏm.
Sommeil, sŏm-ma'e. [bu-lĭzm.
Somnambulism, sŏm-năm'-
Somnus, sŏm'nŭs.
Sonata, so-nah'tah.
Sonchus, sŏng'kŭs.
Sonderbund, sŏn'dĕr-boond.
Soudershausen, sŏn-derz-
Sonnet, sŏn'nĕt. [how'zn.
Sonometer, so-nŏm'e-tŭr.
Sonora, so-no'rah.
Sontag, sŏn'tăg.
Sooloo, soo-loo'.
Sounda, soon'dah.
Sophia, so-fi'ah.
Sophism, so'fizm. [shŭn.
Sophistication, so-fis-te-ka'-
Sophomore, sŏf'o-mōr.
Soprano, so-prah'no.
Sophocles, sŏf'o-kleez.
Sorcery, sôr'sŭr-e.
Sordawalite, sôr-da'wăl-īt.
Sordes, sôr'dēz.
Sordine, sôr'deen.
Soredinm, so-re'do-ŭm.
Sorgo, sôr'go.
Soria, so're-ah.
Sorites, so-ri'teez.
Sorosis, so-ro'sis.
Sorrel, sôr'rĭl.
Sorrento, sôr-răn'to.
Sorus, so'rŭs.
Sospiro, sôs-pe'ro.
Sostennto, sŏs-ta-noo'to.
Sotto voce, sŏt'to vo'cha.
Soudan, soo-dahn'.
Soulié, soo-la'.
Soulouque, soo-look'.
Soult, soolt.
Soutane, soo-tahn'.
Southern, sŭth'ĕrn.
Souvalky, soo-vahl'ke.
Souvenir, soo' neor'.
Souzdal, sooz'dahl.
Sovereign, sŭv'ĕr-In.
Sowing, so'ing.
Soymida, soi'me-dah.
Spadille, spa-deel'.
Spadix, spa'dĭks.
Spado, spah'do.
Spadroon, spăd-roon'.
Spahis, spah'eez.
Spain, spān.
Spalatro, spah-lah'tro.
Spallanzani, spăl-lăn-ze'ne.
Spandrel, span'drĕl.
Spaniard, spăn'yărd.
Sparganium, spăr-ga'ne-ŭm.

Sparta, spăr'tah.
Spartacus, spăr'ta-kŭs.
Spartium, spăr'she-ŭm.
Sparus, spa'rŭs.
Spasm, spăzm.
Spasmology, spăz-mŏl'o-je.
Spatangus, spa-tăng'gŭs.
Spatula, spăt'u-lah.
Spavin, spăv'ĭn.
Special, spĕsh'ul.
Specific, spe-sĭf'ĭk.
Specimen, spĕs'e-mĕn
Spectre, spĕk'tŭr
Spectroscope, spĕk'tro-skōp.
Specularia, spĕk-u-la're-ah.
Speculum, spĕk'u-lŭm.
Speke, spēk.
Spencer, spĕn'sŭr.
Spergula, spŭr'gu-lah.
Spermaceti, spûrm-a-se'te.
Spermaphore, spûrm'a-fôr.
Spermatozoa, spûrm-a-to-
Spew, spū. [zo'ah.
Speyer, spīr.
Sphacelus, sfās'e-lŭs.
Sphagnum, sfăg'nŭm.
Sphargidīdæ, sfar-jĭd'e-de.
Sphegidæ, sfĕj'e-do.
Sphene, sfeen.
Sphere, sfeer.
Spherical, sfĕr'ĭk-ăl.
Spherule, sfĕr'ool.
Sphincter, sfĭngk'tŭr.
Sphingidæ, sfĭn'je-de.
Spica, spi'kah.
Spiccato, speck-kah'to.
Spice, spīs.
Spider, spī'dŭr.
Spielhagen, speel'ah-gān.
Spigelia, spi-ge'le-ah.
Spigot, spĭg'ŏt.
Spigurrel, spe-gŭr'rĕl.
Spiking, spīk'ĭng.
Spilanthes, spe-lăn'theez.
Spinacia, spe-na'she-ah.
Spinel, spe-nel'.
Spinet, spĭn'ĕt.
Spinule, spĭn'ūl.
Spiræa, spe-re'ah.
Spiranthes, spe-răn'theez.
Spiritoso, spir-e-to'zo.
Spiritualism, spĭr'ĭt-u-ăl-ĭzm
Spirula, spĭr'u-lah.
Spissitude, spĭs'se-tūd.
Spitzbergen, spĭts-hĕr'gĕn.
Splanchnology, splangk-
nŏl'o-je.
Splenology, sple-nŏl'o-je.
Spodumene, spŏd'u-meeu.
Spoliation, spo-le-a'shŭn.
Spondee, spŏn'de.
Spondias, spŏn'de-ăs.
Sponge, spŭnj.
Spongiole, spŭn'je-ōl.
Sponsion, spŏn'shŭn.
Sponsor, spŏn'sŏr.
Spontaneity, spŏn-ta-ne'e-te.
Spontini, spŏn-te'no.
Sporades, spŏr'a-deez.
Sporangium, spo-răn'je-ŭm.
Sprague, sprāg.
Sprengel, sprĕng'gĕl.
Sprightly, sprīt'le.
Sprinkle, sprĭngk'l.
Sprocket, sprŏk'ĭt.
Sprout, sprowt.
Spunky, spŭngk'e.
Spurions, spu'ro-ŭs.
Spntum, spu'tŭm.
Spurzheim, spoorts'hĭm
Sphynx, sfingkz.
Squalidæ, skwŏl'e-de.
Squaw, skwaw.
Squier, skwo'ŭr.
Stabat-Mater, sta'bät ma'tŭr.
Staccato, stak-kah'to.
Stackhousiaceæ, stăk-hŏws-
Stadium, sta'de-ŭm. [e-a'se-e.
Stadtholder, stät'hōld-ŭr.
Staël, stahl.
Staffa, stăf'fah.
Stage, stāj.
Staggers, stăg'gŭrz.
Stagirite, stag'e-rīt.
Stagnation, stăg-na'shŭn.
Staith, stăth.
Stalactite, stah-lăk'tīt.
Stalagmite, stah-lăg'mīt.
Stalk, stawk.
Stamen, sta'mĕn.
Stamina, stăm'e-nah.
Stampede, stăm-pēd'.

POPULATION OF THE UNITED STATES

By STATES AND TERRITORIES, COUNTIES, CITIES, TOWNS, VILLAGES AND BOROUGHS

As returned at the TWELFTH CENSUS, JUNE, 1900

Prepared under the direction of

WILLIAM C. HUNT

Chief Statistician for Population

INTRODUCTORY REMARKS.

By the terms of the census act, approved March 3, 1899, the Census Office was charged with the duty of enumerating the population of each of the states and organized territories, including the District of Columbia, and, in addition, the population of Alaska, Hawaii, and Indian Territory. For the purposes of this enumeration 300 supervisors' districts were established, and in 297 of these districts, comprehending all the area to be canvassed, with the exception of Alaska and Hawaii, the conduct of the work was vested in officers termed by the census act Supervisors of Census, appointed by the President and confirmed by the Senate. In the remaining 3 districts, namely, 2 in Alaska and 1 in Hawaii, the enumeration was placed in charge of special agents, appointed by the Director of the Census, under the discretion given him by the census act. For purposes of the enumeration the area comprising the 297 supervisors' districts was divided into 52,726 enumeration districts, and, similarly, that comprising the 3 districts in Alaska and Hawaii into 145 districts. The census was taken as of June 1, 1900, and was to be completed in two weeks in places of 8,000 inhabitants or more at the census of 1890, and in one month in rural districts.

By special arrangement with the Secretary of War and the Secretary of the Navy, the enumeration of persons in the military and naval service, either at stations in this country or abroad, was made in behalf of this office through the agencies of the War and Navy Departments.

The first returns of population were received June 13, 1900, and the count of population was begun shortly thereafter.

AGGREGATE POPULATION.

The population of the United States, including that of Alaska, Hawaii, Indian Territory, and Indian reservations, taken as of June 1, 1900, is 76,303,387, distributed by states and territories as follows:

STATES AND TERRITORIES.	Population in 1900.	Indians not taxed in 1900.
The United States	76,303,387	129,518
States.		
Alabama	1,828,697	.....
Arkansas	1,311,564	.....
California	1,485,053	1,549
Colorado	539,700	597
Connecticut	908,420	.....
Delaware	184,735	.....
Florida	528,542	.....
Georgia	2,216,331	.....
Idaho	161,772	2,297
Illinois	4,821,550	.....
Indiana	2,516,462	.....
Iowa	2,231,853	.....
Kansas	1,470,495	.....
Kentucky	2,147,174	.....
Louisiana	1,381,625	.....
Maine	694,466	.....
Maryland	1,188,044	.....
Massachusetts	2,805,346	.....
Michigan	2,420,982	.....
Minnesota	1,751,394	1,768
Mississippi	1,551,270	.....
Missouri	3,106,665	.....
Montana	243,329	10,746
Nebraska	1,066,300	.....
Nevada	42,335	1,665
New Hampshire	411,588	.....
New Jersey	1,883,669	.....
New York	7,268,894	4,711
North Carolina	1,893,810	.....
North Dakota	319,146	4,692
Ohio	4,157,545	.....
Oregon	413,536	.....
Pennsylvania	6,302,115	.....
Rhode Island	428,556	.....
South Carolina	1,340,316	.....
South Dakota	401,570	10,932
Tennessee	2,020,616	.....
Texas	3,048,710	.....
Utah	276,749	1,472
Vermont	343,641	.....
Virginia	1,854,184	.....
Washington	518,103	2,531
West Virginia	958,800	.....
Wisconsin	2,069,042	1,657
Wyoming	92,531	.....
Total for 45 states	74,607,225	44,617
Territories.		
Alaska	63,592	.....
Arizona	122,931	24,644
District of Columbia	278,718	.....
Hawaii	154,001	.....
Indian Territory	392,060	51,393
New Mexico	195,310	2,937
Oklahoma	398,331	5,927
Total for 7 territories	1,604,943	84,901
Persons in the military and naval service of the United States (including civilian employees, etc.) stationed abroad.	91,219	.....

As shown by the preceding table, 129,518 Indians not taxed were enumerated at the census of 1900, and are included in the statement of the aggregate population of the country and of the several states and territories in which they are found; but, under the provisions of the Constitution, the number of Indians not taxed living in the 45 states (44,617) should be deducted from the total population of the states and from that of each state affected thereby, for the purpose of determining the population to be used in the apportionment of representatives.

The 91,219 persons enumerated at military or naval stations abroad, including naval vessels, are distributed as follows:

LOCATION OF STATIONS.	Total.	Officers and enlisted men.	Civilian employees, etc.
Aggregates	91,219	87,538	3,681
Naval vessels	14,701	14,305	396
Cuba	11,048	9,666	1,382
Guam	147	147	.....
Philippines	62,095	60,883	1,212
Porto Rico	3,201	2,537	664
Tutuila	27	.....	27

The 396 persons reported under the heading of "civilian employees, etc.," as being on naval vessels include boys and other persons (not officers or enlisted men) on vessels loaned to certain states for use as school ships and on vessels under the control of other departments of the government, but which are operated by officers and enlisted men detailed by the Navy Department. The remaining 3,285 persons classed under the same heading include not only civilian employees, but also officers' servants and members of the families of certain of the officers and enlisted men and of civilian employees.

No provision was made by the census act for the enumeration of the inhabitants of Porto Rico, but a census for that island taken as of November 10, 1899, under the direction of the War

Department, showed a population of 953,243. A similar enumeration, under the direction of the War Department, was made of the island of Cuba, and this census, taken as of October 16, 1899, showed a population of 1,572,797. No census of the Philippines, or of the islands of Guam and Tutuila, has been taken since they have been in the possession of the United States, although an attempt is now being made to take a partial census of the Philippines, under the direction of the civil commission, popularly known as the Taft Commission, appointed by the President April 7, 1900.

There was no enumeration made as a part of the United States census, prior to 1890 of the Indians and other persons living in Indian Territory and on Indian reservations, or prior to 1880 of the population of Alaska. Hawaii was annexed August 12, 1898, and the census of 1900 is, therefore, the first census of the islands taken under the supervision of the United States. The Hawaiian Government, however, took a census every six years from 1866 to 1896, inclusive, and the figures derived from the census taken as of December 28, 1890, are used for comparison with similar results for 1900.

The total population in 1890, with which the aggregate population at the present census should be compared, is 63,069,756, comprising 62,622,250 persons enumerated in the states and organized territories at that census; 32,052 persons in Alaska; 180,182 Indians and other persons in Indian Territory; 145,282 Indians and other persons on Indian reservations, etc.; and 89,990 persons in Hawaii, this last-named figure being taken from the census of December 28, 1890, as explained in the preceding paragraph. These figures for 1890 are compared with similar figures for 1900 as follows:

	1900	1890
States and organized territories	75,559,258	62,622,250
Alaska	63,592	32,052
Hawaii	154,001	89,990
Indian Territory	392,060	180,182
Indian reservations, etc	134,476	145,282
Total population	76,303,387	63,069,756

On the basis of the above figures, the aggregate population of the entire area of enumeration in 1900 is 76,303,387, which, compared with the population of equivalent areas in 1890, namely, 63,069,756, shows an increase during the decade of 13,233,631, or 21 per cent.

POPULATION AT EACH CENSUS: 1790 TO 1900.

In order to make a direct comparison of the population in 1890 and 1900 with that comprehended by preceding censuses, it is necessary to exclude from the statements of population in 1890 and 1900 the population of those areas which have been included only recently in the Federal census, as indicated by the following table:

CENSUS YEARS.	States and organized territories, etc.	Indian Territory, Indian reservations, etc.	Alaska.	Hawaii.
1900	75,559,258	526,536	63,592	154,001
1890	62,622,250	325,464	32,052	89,990
1880	50,155,783	.....	33,426	.....
1870	38,558,371	.....	.....	.....
1860	31,443,321	.....	.....	.....
1850	23,191,876	.....	.....	.....
1840	17,069,453	.....	.....	.....
1830	12,866,020	.....	.....	.....
1820	9,638,453	.....	.....	.....
1810	7,239,881	.....	.....	.....
1800	5,308,483	.....	.....	.....
1790	3,929,214	.....	.....	.....

Eliminating the population of Alaska, Hawaii, Indian Territory and Indian reservations in 1900, there remains, as shown by the above table, 75,559,258, which figure can be compared with the population obtained in 1890 as a part of the general enumeration (62,622,250), and with the population returned at each census from 1790 to 1880, inclusive. There has been an increase in the population of the states and organized territories of the United States since 1890, on this basis, of 12,937,008, or 20.7 per cent, as compared with an increase from 1880 to 1890 for the same area of 12,466,467, or 24.9 per cent, as shown by the following table:

INCREASE AT EACH CENSUS.

CENSUS YEARS.	Population, excluding Alaska, Hawaii, Indian Territory, Indian reservations, etc.	INCREASE.	
		Number.	Per cent.
1900	75,559,258	12,937,008	20.7
1890	62,622,250	12,466,467	24.9
1880	50,155,783	11,597,412	30.1
1870	38,558,371	7,115,050	22.6
1860	31,443,321	8,251,445	35.6
1850	23,191,876	6,122,423	35.9
1840	17,069,453	4,203,433	32.7
1830	12,866,020	3,227,567	33.5
1820	9,638,453	2,398,572	33.1
1810	7,239,881	1,931,398	36.4
1800	5,308,483	1,379,269	35.1
1790	3,929,214	.....	.....

As stated in the census report of 1890, there was a deficiency in the enumeration of the population in the southern states in 1870, which not only gave an exaggerated rate of increase between 1870 and 1880 in the population of those states, but affected materially the rate of increase in the country at large. There is no means of ascertaining accurately the extent of these omissions, but an approximate correction in the population for 1870 was made in the census report of 1890, by which the population in 1870 was said to be 39,818,449 instead of 38,558,371, resulting in the following changes in the percentages of increase from 1860 to 1870 and from 1870 to 1880, respectively:

CENSUS YEARS.	Population.	INCREASE.	
		Number.	Per cent.
1860	31,443,321	.....	.....
1870	[a] 39,818,449	8,375,128	26.6
1880	50,155,783	10,337,334	26.0

[a] Corrected population.

Using the corrected population for 1870, an increase of 26 per cent is shown for the decade from 1870 to 1880, or practically the same rate of increase that was attained during the preceding ten years. There was an increase in the population of the states and organized territories from 1880 to 1890 of not quite 25 per cent, and from 1890 to 1900, as previously stated, of not quite 21 per cent.

The population of states and territories as returned at each census from 1790 to 1900, inclusive, is presented in the table printed on pages 12–13, while the increase in the population of states and territories at each decennial period, based upon the figures given in the table referred to above, is presented in the table printed on pages 14–15.

POPULATION ARRANGED GEOGRAPHICALLY.

In order that the aggregate population returned at the census of 1900 may be compared with the population of equivalent areas in 1890, as stated on page 4, it is necessary to add 447,506 persons, specially enumerated, to the population of the states and organized territories in 1890, giving a total population of 63,069,756, distributed by states and territories, arranged geographically, as follows:

STATES AND TERRITORIES.	1900	1890		
		Total.	Included in general enumeration.	Specially enumerated.

a Decrease.

As shown by the above table (columns 1 and 2), there has been an increase of 21 per cent in the population of the entire area of enumeration in 1900 as compared with the population of the same area in 1890, representing a total numerical increase of 13,233,631. Excluding the population of Alaska,

Hawaii, Indian Territory and Indian reservations in 1890 and 1900, there has been an increase in the population of the states and organized territories during the decade, as shown by the last table (columns 3 and 4), of 12,937,008, or 20.7 per cent, as compared with an increase of 12,466,467, or 24.9 per cent, for the equivalent area from 1880 to 1890.

Among the several states and territories, Oklahoma shows the largest percentage of increase since 1890. The territory of Oklahoma was opened to settlement in May, 1890, and at the census taken one month later, in June, 1890, had a population of 78,475, including 16,641 Indians and other persons specially enumerated, but not included in the general report on population at that census. At the census of 1900 it had a population of 398,331, or an increase since 1890 of 407.6 per cent; in other words, its population in 1900 is more than five times as large as the entire population returned in 1890.

The second largest percentage of increase in population since 1890 is found in Indian Territory, being somewhat more than 100 per cent. The population of Indian Territory was specially enumerated in 1890, but no part of the population thus enumerated was included in the general report on population. There were 180,182 Indians and other persons enumerated in Indian Territory in 1890, but this number has been increased to 392,060 in 1900, showing an increase of 211,878, or 117.6 per cent, during the ten years.

The population of Idaho has increased 82.7 per cent since 1890, while the population of Montana has increased 70.3 per cent, and that of North Dakota 67.1 per cent. The 5 states and territories named are the only ones in which the population has increased more than 50 per cent during the ten years from 1890 to 1900, but Wyoming has increased its population during the same period by 47.9 per cent, and Washington its population by 45 per cent.

Nevada is the only state that shows an actual decrease in its population since 1890, but for this state there was a much larger decrease reported for the preceding decade, or 26.5 per cent from 1880 to 1890 as against 10.6 per cent from 1890 to 1900. The smallest percentage of increase during the ten years is that shown by Nebraska, being less than one-half of 1 per cent, while for the same period there has been an increase of only 3 per cent in the population of Kansas, 3.4 per cent in that of Vermont, and 5 per cent in that of Maine.

There has been a gain during the decade of not quite 10 per cent in the population, respectively, of Delaware and New Hampshire, and of between 10 and 40 per cent in the population of each of the remaining states and territories, the largest percentage among this class being that for Arizona, or 39.3 per cent, and the smallest percentage that for Virginia, or 12 per cent.

DENSITY OF POPULATION.

The gross area (land and water surface) of the United States, exclusive of Alaska and Hawaii, is 3,025,600 square miles. The United States at the first census, in 1790, comprised only the territory between the Atlantic ocean and the Mississippi river, representing a gross area of 827,844 square miles. There was no change in the gross area of the country at the census of 1800, but in 1803 there were added by the Louisiana purchase more than a million square miles, making the gross area of the country 1,999,775 square miles. In 1819 our territory was increased, by the purchase of the Floridas from Spain, to 2,059,043 square miles, which represented the gross area of the country at the censuses of 1820, 1830 and 1840. Between 1840 and 1850 there was a large acquisition of territory from Mexico, so that at the census of 1850 the gross area of the United States comprised 2,980,959 square miles. By the Gadsden purchase, in 1853, our territory was further increased to 3,025,600 square miles, which constitutes the present area of the country, exclusive of the areas of Alaska and Hawaii. The territory of Alaska, comprising 590,884 square miles, was purchased from Russia in 1867, and the territory of Hawaii, comprising 6,449 square miles, was acquired by annexation in 1898. Including Alaska and Hawaii, the entire area of enumeration at the present census comprises 3,622,933 square miles.

GROSS AREA, EXCLUSIVE OF ALASKA AND HAWAII, AT EACH CENSUS: 1790 TO 1900.

The gross area (land and water surface) which the country, exclusive of Alaska and Hawaii, had at the date of each census, from 1790 to 1900, inclusive, is summarized as follows:

CENSUS YEARS.	Gross area in square miles.	CENSUS YEARS.	Gross area in square miles.
1900	3,025,600	1840	2,059,043
1890	3,025,600	1830	2,059,043
1880	3,025,600	1820	2,059,043
1870	3,025,600	1810	1,999,775
1860	3,025,600	1800	827,844
1850	2,980,959	1790	827,844

The area in square miles, including land and water surface, of the several states and territories at the census of 1900 is presented in the following table:

STATES AND TERRITORIES.	Gross area.	Water surface.	Land surface.
Total	3,622,933	55,562	2,970,038
Alabama	52,250	710	51,540

Delaware bay	620	620	.....
Raritan bay and Lower New York bay	100	100	.....

The density of population of the United States, exclusive of Alaska and Hawaii, according to the census of 1900, is 25.6,

that is, there are in the United States in 1900, on the average, 25.6 inhabitants to the square mile, using land surface only. At the census of 1790 there were less than 5 inhabitants to the square mile, so that the density of the population of the country has increased in 110 years more than fivefold, although the land area of the country in 1900, exclusive of Alaska and Hawaii, is more than three and one-half times what it was in 1790.

The density of population of the several states and territories at each census is shown in detail in the table printed on page 16.

Excluding the District of Columbia, which is in effect a municipality, Rhode Island, with 407 inhabitants to the square mile in 1900, is the most densely settled state in the Union, while Massachusetts comes next, with not quite 349 inhabitants to the square mile. New Jersey, with a little more than 250 inhabitants to the square mile in 1900, is the third state in point of density of population, while Connecticut, with somewhat more than 187 inhabitants to the square mile, occupies fourth place. Four other states have more than 100 inhabitants to the square mile in 1900, namely, New York, with 152.6 inhabitants; Pennsylvania, with 140.1 inhabitants; Maryland, with 120.5 inhabitants; and Ohio, with 102 inhabitants to the square mile.

Alaska has, on the average, but one-tenth of 1 person to the square mile in 1900, and, similarly, Nevada has only four-tenths of 1 person to the square mile. Wyoming has not quite 1 inhabitant to the square mile in 1900, while Arizona has an average to the square mile of 1.1 inhabitants; New Mexico of 1.6 inhabitants; Montana of 1.7 inhabitants; and Idaho of 1.9 inhabitants.

The newly acquired territory of Hawaii shows an average density of population in 1900 of not quite 24 persons, ranking in this respect between Maine, with 23.2 persons, and Arkansas, with 24.7 persons to the square mile.

THE CENTER OF POPULATION AND ITS MEDIAN POINT.

By the Twelfth Census the center of population in 1900 was in the following position:

Latitude	39° 9′ 36″
Longitude	85° 48′ 54″

In ten years the center of population has moved westward 16′ 1″, or about fourteen miles, and southward 2′ 20″, or about two and one-half miles. It rests now in southern Indiana, at a point about six miles southeast of Columbus, the county seat of Bartholomew county, Indiana. The surroundings of its location are shown upon the sketch map printed on page 11.

The center of population is the center of gravity of the population of the country, each individual being assumed to have the same weight. In order that the result might be comparable with those obtained in 1880 and 1890, the population of Alaska and Hawaii, although included in the Twelfth Census, has not been included here. The method used was in brief as follows:

The population of the country was first distributed by "square degrees," as the area included between consecutive parallels and meridians has been designated. A point was then assumed, tentatively, as the center, and corrections in latitude and longitude to this tentative position were computed. In this case the center was assumed to be at the intersection of the parallel of 39° north with the meridian of 86° west of Greenwich. The population of each square degree was assumed to be located at the center of that square degree, except in cases where it was manifest that this assumption would be untrue, as, for instance, where a part of the square degree was occupied by the sea or other large body of water, or where it contained a city of considerable magnitude which was situated "off center." In these cases the position of the center of the population of the square degree was estimated as nearly as possible. The shortest distances between each such center of population of a square degree (whether assumed to be at, or at a distance from, the center of the square degree) and the assumed parallel and meridian were obtained. The population of each square degree was then multiplied by the shortest distance of its center of population from the assumed parallel of latitude, and the sums of the products, or moments, north and south of that parallel were obtained. Their difference, divided by the total population of the country, gave a correction to the latitude of the assumed center of population. In a similar manner, the east and west moments were obtained, and from them a correction to the longitude of the assumed center was obtained.

In 1790 the center of population was at 39° 16.5′ north latitude and 76° 11.2′ west longitude, which a comparison of the best maps available would seem to place about 23 miles east of Baltimore. During the decade from 1790 to 1800 it appears to have moved almost due west to a point about 18 miles west of the same city, being in latitude 39° 16.1′ and longitude 76° 56.5′.

From 1800 to 1810 it moved westward and slightly southward to a point about 40 miles northwest by west of Washington, being in latitude 39° 11.5′ and longitude 77° 37.2′. The southward movement during this decade appears to have been due to the annexation of the territory of Louisiana, which contained quite extensive settlements.

From 1810 to 1820 it moved westward and again slightly southward to a point about 16 miles north of Woodstock, Virginia, being in latitude 39° 5.7′ and longitude 78° 33′. This second southward movement appears to have been due to the extension of settlements in Mississippi, Alabama, and eastern Georgia.

From 1820 to 1830 it moved still westward and southward to a point about 19 miles southwest of Moorefield, in the present state of West Virginia, being in latitude 38° 57.9′ and longitude 79° 16.9′. This is the most decided southward movement that it has made during any decade. It appears to have been due in part to the addition of Florida to our territory, and in part to the great extension of settlements in Alabama, Louisiana, Mississippi, and Arkansas, or generally, it may be said, in the southwest.

From 1830 to 1840 it moved still farther westward, but slightly changed its direction northward, reaching a point 16 miles south of Clarksburg, in the present state of West Virginia, being in latitude 39° 2′ and longitude 80° 18′. During this decade settlement had made decided advances in the prairie states and in the southern portions of Michigan and Wisconsin, the balance of increased settlement evidently being in favor of the northwest.

From 1840 to 1850 it moved westward and slightly southward again, reaching a point about 23 miles southeast of Parkersburg, in the present state of West Virginia, in latitude 38° 59′ and longitude 81° 19′, the change of direction southward being largely due to the annexation of Texas.

From 1850 to 1860 it moved westward and slightly northward, reaching a point 20 miles south of Chillicothe, Ohio, this being in latitude 39° 0.4′, longitude 82° 48.8′.

From 1860 to 1870 it moved westward and sharply northward, reaching a point about 48 miles east by north of Cincinnati, Ohio, in latitude 39° 12′, longitude 83° 35.7′ This northward movement was due in part to waste and destruction in the south, consequent upon the civil war, and in part, probably, to the fact that the census of 1870 was defective in its enumeration of the southern people, especially of the newly enfranchised negro population.

In 1880 the center of population had returned southward to nearly the same latitude which it had in 1860, being in latitude 39° 4.1′, longitude 84° 39.7′. This southward movement was due only in part to an imperfect enumeration at the south

in 1870. During the decade from 1870 to 1880 the southern states made a larger positive increase, both from natural growth and from migration southward.

In 1890 the center of population had moved northward into practically the same latitude it occupied in 1870. This northward movement was largely due to the great development in the cities of the northwest and in the state of Washington, and also to the increase of population in New England. Its position was in latitude 39° 11′ 56″ and longitude 85° 32′ 53″.

During the past decade the center of population has moved westward 16′ 1″, a little over 14 miles, and southward 2′ 20″, a little less than 3 miles. This is the smallest movement that has ever been noted. The slight southward movement is due largely to the great increase in population of Indian Territory, Oklahoma, and Texas, while the great decrease in the westward movement of the center is, undoubtedly, due to the large increase in the population of the North Atlantic states. It also shows that the population of the western states has not increased as rapidly as in former decades.

The closeness with which the center of population, through its rapid westward movement, has clung to the parallel of 39° of latitude can not fail to be noticed. The most northern point reached was at the start, in 1790; the most southern point was in 1830, the preceding decade having witnessed a rapid development of population in the southwest—Alabama, Arkansas, Mississippi, and Louisiana having been admitted as states, and Florida annexed and organized as a territory. The extreme variation in latitude has been less than 19 minutes, while the 110 years of record have accomplished a movement in longitude of a little over 9.5 degrees. Assuming the westward movement to have been uniformly along the parallel of 39° of latitude, the westward movement of the several decades has been as follows: 1790–1800, 41 miles; 1800–1810, 36 miles; 1810–1820, 50 miles; 1820–1830, 39 miles; 1830–1840, 55 miles; 1840–1850, 55 miles; 1850–1860, 81 miles; 1860–1870, 42 miles; 1870–1880, 58 miles; 1880–1890, 48 miles; 1890–1900, 14 miles. This is a total westward movement of 519 miles since 1790. The sudden acceleration of movement between 1850 and 1860 was due to the transfer of a considerable body of population from the Atlantic to the Pacific coast, twelve individuals in San Francisco exerting as much pressure at the then pivotal point, namely, the crossing of the 83d meridian and the 39th parallel, as forty individuals in Boston.

POSITION OF THE CENTER OF POPULATION: 1790 TO 1900.

The following table and the sketch map printed on page 11 show the movement of the center of population since 1790:

CENSUS YEARS.	North latitude.	West longitude.	Approximate location by important towns.	Westward movement in miles during preceding decade.
1790...	39° 16.5′	76° 11.2′	23 miles east of Baltimore, Md.	.....
1800...	39 16.1	76 55.5	18 miles west of Baltimore, Md.	41
1810...	39 11.5	77 37.	40 miles northwest by west of Washington, D. C.	36
1820...	39 5.7	78 33.0	16 miles north of Woodstock, Va.	50
1830...	38 57.9	79 16.9	19 miles west-southwest of Moorefield, in the present state of West Virginia.	39
1840...	39 2.0	80 18.0	16 miles south of Clarksburg, in the present state of West Virginia.	55
1850...	38 59.0	81 19.0	23 miles southeast of Parkersburg, in the present state of West Virginia.	55
1860...	39 0.4	82 48.8	20 miles south of Chillicothe, Ohio.	81
1870...	39 12.0	83 35.7	48 miles east by north of Cincinnati, Ohio.	42
1880...	39 4.1	84 39.7	8 miles west by south of Cincinnati, Ohio.	58
1890...	39 11.9	85 32.9	20 miles east of Columbus, Ind.	48
1900...	39 9.5	85 48.9	6 miles southeast of Columbus, Ind.	14

The center of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in northern Kansas, in approximate latitude 39° 55′, and approximate longitude 98° 50′. The center of population is, therefore, about three-fourths of a degree south and more than thirteen degrees east of the center of area.

The median point is the point of intersection of the line dividing the population equally north and south with the line dividing it equally east and west. In short, it is the central point of the population. It differs from the center of population in the fact that distance from the center is not considered. Its movements from census to census bear no relation to the movements of the population, since only movements by which bodies of population are transferred across its parallel or its meridian have any influence upon its position. To illustrate this, a million people may move from Minnesota to Washington state without affecting its position, while the movement of a hundred persons from Michigan to Wisconsin might affect it appreciably. In 1900 the meridian of 84° 51′ 29″ equally divided the population of the United States east and west, and the parallel of 40° 04′ 22″ equally divided it north and south. The median point, therefore, is located at Spartanburg, Ind.

In order to make a comparison with the movement of the center of population, computations were also made for the Tenth and Eleventh Censuses. The following table shows the location of the median point at each census:

YEAR.	Longitude.	Latitude.	Location.
1880....	84° 07′ 12″	39° 57′ 00″	16.2 miles nearly due west of Springfield, Ohio.
1890....	84 40 01	40 02 51	4.8 miles southwest of Greenville, Ohio.
1900....	84 51 29	40 04 22	In Spartanburg, Ind.

The movement of the median point from 1880 to 1890 was north 5′ 51″ and west 32′ 49″. From 1890 to 1900 it moved north 1′ 31″ and west 11′ 28″. The comparison of the movements of the center of population and the median point shows that they do not move in parallel lines, as from 1880 to 1890 the median point moved west 27 miles and north 6.6 miles, while the center of population moved west 48 miles and north 9 miles. From 1890 to 1900 the median point moved west 10.8 miles and north 2.4 miles, while the center of population moved west 14 miles and south 2.5 miles.

THE TERRITORY OF ALASKA.

The territory of Alaska was acquired by treaty from Russia in 1867. No systematic enumeration of the entire population was ever undertaken by the Russian Government, although various counts and estimates were made at different times of certain elements of the population and of specific districts and settlements. An effort was made, however, in 1839, by Veniaminof, a Russian priest, to summarize all existing information as to the total population of the Russian possessions in America. In doing this he grouped the inhabitants as those "known and counted," those "known but not counted," and those "estimated only," and the sum of these three made a total population of 39,813, of which only 10,313 were in the class of "known and counted." Twenty-four years later, in 1863, Kostlivtzof, a special inspector of the Russian Government, made another estimate, based upon a partial enumeration, in which the population was classified by tribes, the result of which was a total of 30,434. Examples of less careful, though semi-official, statements of the total population of Alaska, during the Russian occupation, are found in the biennial reports of the Russian-American Company, in which the total is given

in round numbers as from 56,000 to 70,000, and later, in the report of Major General Halleck, U. S. A., at the time of the acquisition, in which the total was fixed at, approximately, 82,400, an estimate which, it is said, was "largely augmented by the unconscious duplication of tribes and the inclusion of others which had no existence."

No attempt was made by the United States Government to enumerate the people of Alaska at the decennial census of 1870, three years after the purchase; but in 1880 the Superintendent of Census designated special agents to canvass the territory and make such an enumeration as the difficulties of the situation permitted. The result of this effort was an actual count of all accessible settlements, supplemented by estimates, based for the most part on the records and personal knowledge of the missionary priests, for those regions which could not be visited in person by the special agents. The figures thus obtained made up a total of 33,426. At the taking of the Eleventh Census, in 1890, it was found possible to make a somewhat more extended canvass of various parts of the territory, and the count of the people which resulted therefrom showed a total of 32,052, with probably a smaller element of uncertainty in it than in any preceding total.

The Twelfth Census has been taken under more favorable conditions, owing to the greatly increased facilities for communication and to the introduction of a new and large element attracted from the United States and elsewhere by the recently discovered gold fields.

For purposes of census enumeration the territory of Alaska in 1900 was divided arbitrarily into 2 districts, namely, the Northern district, which embraces the valley of the Yukon river and all the territory north of it, and the Southern district, which embraces all the remainder of the territory, including the Alaskan peninsula and the chain of Aleutian Islands. At the census of 1880 the territory was subdivided into 6 districts, 2 of which correspond with the Northern district, as at present defined, and 4 with the Southern district. Likewise, at the census of 1890, 7 districts were formed for enumeration purposes, the boundaries of 2 of which conform substantially with the present Northern district, and the boundaries of the remainder with the present Southern district. In the absence of any survey or established lines in Alaska, the natural barrier interposed by the mountain range between the valley of the Yukon and that of the Kuskokwim rivers has been assumed as a sufficiently well-defined boundary for census purposes, and this range has, in fact, constituted the dividing line between districts in each of the preceding censuses.

Owing to the exceptional difficulties to be encountered in making an enumeration of these remote and sparsely settled regions, the work of the Twelfth Census was assigned to two special agents, Mr. Samuel C. Dunham for the Northern district, and Mr. William A. Kelly for the Southern district, both well equipped for the service by previous residence in the territory and personal knowledge of the places and people within their respective districts. As a consequence of the changed conditions, and of the zeal and knowledge of the special agents in charge of the census work, the enumeration has been successful to a degree not before attained, and the results may be accepted with corresponding confidence.

The total population of Alaska, as shown by the returns of the Twelfth Census, is 63,592. The territory had a population of 32,052 in 1890, and according to these figures, the population has nearly doubled during the decade. The actual increase from 1890 to 1900 is 31,540 and the percentage of increase, 98.4.

There are no civil divisions in Alaska corresponding to the counties and townships of other territories.

THE TERRITORY OF HAWAII.

The Hawaiian Islands were annexed to the United States by the act of Congress approved July 7, 1898, which act took effect in Hawaii August 12, 1898. The act of Congress approved April 30, 1900, made provision for a territorial government, and under this act Mr. Sanford B. Dole, formerly President of the Provisional Government, took the oath of office as governor on June 14, 1900.

The first census of the Hawaiian Islands was taken in 1832, and was followed by the censuses in 1836, 1850, 1853, and 1860. These censuses are said to have been very simple and rudimentary in character, and a census taken at regular periods was not provided for until 1865, when the Legislative Assembly made it "the duty of the Board of Education, every sixth year, counting from the year 1860, to make a complete census of the inhabitants of the Kingdom, to be laid before the King and Legislature for their consideration."

Under the terms of this requirement a census of the Hawaiian Islands was taken every six years from 1866 to 1896, inclusive. The present census, that of 1900, has been taken as a part of the work of the Twelfth Census of the United States, the Director of the Census having been authorized and directed by section 7 of the census act to make suitable provisions for the enumeration of the population and products of the Hawaiian Islands, and to employ for the purpose either supervisors and enumerators or special agents, as he should deem necessary.

The census of Hawaii was accordingly taken by special agents, under the supervision of Mr. Alatau T. Atkinson, as chief special agent, Mr. Atkinson having previously served as the general superintendent of the Hawaiian census in 1896.

The census of Hawaii in 1900, as previously stated, was taken as of June 1 of that year, but the censuses from 1866 to 1896, inclusive, were taken as of different dates, as follows: 1866—December 7; 1872—December 27; 1878—December 27; 1884—December 27; 1890—December 28; 1896—September 27. No information is available concerning the dates as of which the census prior to 1866 were taken.

The population of Hawaii at each census from 1832 to 1900, inclusive, was as follows: 1832, 130,313; 1836, 108,579; 1850, 84,165; 1853, 73,138; 1860, 69,700; 1866, 62,959; 1872, 56,897; 1878, 57,985; 1884, 80,578; 1890, 89,990; 1896, 109,020; 1900, 154,001.

According to the returns of the Twelfth Census, taken as of June 1, 1900, the territory of Hawaii had a population of 154,001, as compared with a population of 89,990 in 1890, as shown by the census taken as of December 28 of that year, under the direction of the Hawaiian Government. On the basis of these two censuses the population of Hawaii has increased 64,011, or 71.1 per cent, during the last ten years.

APPORTIONMENTS.

The apportionment of representatives in Congress, according to the enumeration of the First, Second, Third, Fourth, Fifth, and Sixth Censuses, was made by Congress. At these apportionments Congress set the ratio of population for each member allowed, and also at each apportionment fixed the total number of members of the House.

The law for the taking of the Seventh Census (act of May 23, 1850) was intended to be permanent. It presented a rule of apportionment, fixed the number of members of the House at 233, and directed the Secretary of the Interior thereafter to make the apportionment to each state.

The apportionment under the Eighth Census was made under this law, but on March 4, 1862, Congress fixed the total number

of members at 241, and the Secretary of the Interior apportioned the new quotas to the states.

The ninth and tenth apportionments were made by Congress; hence it may be assumed that the power conferred on the Secretary of the Interior by the act of May 23, 1850, was repealed by implication. Heretofore all apportionments have been made at the long sessions of Congress, being the second session after each census year, but early enough for the election of representatives to the next ensuing Congress.

The apportionments under the Eleventh and Twelfth Censuses were made at the short session of Congress immediately following the date of the census enumeration, the apportionment act under the Eleventh Census having been approved February 7, 1891, and that under the Twelfth Census, January 16, 1901.

NUMBER OF REPRESENTATIVES AS APPORTIONED ON THE ENUMERATION OF THE SEVERAL CENSUSES.

APPORTIONMENT UPON THE ENUMERATION OF THE SEVERAL CENSUSES.			Assigned after apportionment.	MEMBERSHIP AT CLOSE OF SESSION BEFORE NEW ACT TAKES EFFECT.		
Census.	Act of—	Number.		Number	Congress.	Date ending—
Prior to 1790	Constitution	65	.....	65	.....	.....
First Census	April 14, 1792	105	1	106	Second	March 2, 1793
Second Census	January 14, 1802	141	1	142	Seventh	March 3, 1803

[3] Exclusive of persons on Indian reservations.

[4] Decrease; exclusive of persons on Indian reservations.

[5] Decrease.

[6] North and South Dakota combined. Apportioning the population of Dakota territory in 1880, North Dakota (36,909 in 1880) increased 145,810, or 395.1 per cent. and South Dakota (98,268 in 1880) increased 230,540, or 234.6 per cent.

[7] Dakota territory.

[8] Less than one-tenth of 1 per cent.

[9] Decrease; due to loss of territory, West Virginia having been set off from Virginia December 31, 1862.

DENSITY OF POPULATION OF STATES AND TERRITORIES AT EACH CENSUS: 1790 TO 1900.

[The density of population is obtained by dividing the population of each state and territory and of the United States by its total land area in square miles at each census. In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870 and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the states and territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained and, for this reason, can not be considered in figuring density of population at the censuses prior to 1890.]

[1] Organized from part of Howard in 1883; part annexed to Billings in 1897, and part taken to form part of Williams since 1890.

[2] Organized from parts of De Smet and Ramsey in 1883.

[3] Part taken to form Bowman in 1883; Bowman, McKenzie, and part of Alred annexed in 1897.

[4] Part of Renville annexed in 1897.

[5] Organized from part of Billings in 1883; annexed to Billings in 1897.

[6] Organized from part of Wallette in 1883; taken to form part of Williams since 1890.

[7] Organized from parts of McHenry and Sheridan in 1887; annexed to McHenry, McLean and Pierce since 1890.

[8] Organized from part of Howard in 1883; annexed to Stark in 1897.

[9] Annexed to McLean in 1891.

[10] Organized from part of Stark in 1883; annexed to Stark in 1897.

[11] Part taken to form part of Church in 1887; part of Church annexed since 1890.

[12] Organized from part of Howard in 1883; annexed to Billings in 1897.

[13] Organized from part of Stevens in 1883; Garfield and Sheridan annexed in 1891, and parts of Church and Stevens annexed since 1890.

[14] Part taken to form Oliver in 1885; part of former Williams annexed since 1890

[15] Annexed to Ward in 1891.

[16] Organized from De Smet in 1887; part of Church annexed since 1890.

[17] Part taken to form part of Ward in 1885; annexed to Bottineau and Ward in 1897.

[18] Part taken to form part of Church in 1887; annexed to McLean in 1891.

[19] Part taken to form Hettinger in 1883; Dunn, Hettinger and Wallace annexed in 1897, and part of former Williams annexed since 1890.

[20] Parts taken to form McLean in 1883, and Garfield and part of Ward in 1885; parts annexed to McLean and Ward since 1890.

[21] Organized from part of Howard in 1883; annexed to Stark in 1897.

[22] Organized from parts of Renville and Stevens in 1885; Mountraille annexed in 1891, part of Renville annexed in 1897, and part of Stevens annexed since 1890.

[23] Annexed to Mercer and Stark since 1890.

[24] Organized from Beauford, Flannery and part of Alred since 1890.

[25] Population of Fort Yates and Standing Rock Indian agency, exclusive of reservation Indians.

[26] Cannot be located by counties. For population of remainder of reservation see figures for South Dakota. Returned in 1890 as unorganized territory.

OHIO.

[1] Not separately returned in 1830.

POPULATION OF INCORPORATED CITIES, TOWNS, VILLAGES AND BOROUGHS IN 1900, WITH POPULATION FOR 1890.

[This table gives the population of all incorporated places in the United States, so far as they have been returned by the census enumerators, separate from the population of the townships, precincts, districts, etc., of which they form a part. There are no incorporated places in Alaska.]
